Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in this or associated industries or areas, or (b) because the industry was of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on this industry.)

[1]Comparable data on a State basis prior to 1963 are not available, because state data for 1958 included coffee roasting establishments now classified in Industry 2095, Roasted Coffee.

[2]Less than $500 thousand.

n.e.c. Not elsewhere classified. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. rRevised.

[1]In 1958, separate data for other chips, sticks, etc. were not collected. A review of the 1958 reports for some of the large producers of these products indicates that they probably reported these products with potato chips.

[2]Quantity estimated based on quantity-value relationship reported for other products.

[3]Does not include the quantity of baking powder manufactured by wholesale grocers classified in Standard Industrial Classification Industry Group 5042, Groceries and Food Specialties; no statistics were obtained in either the 1958 or 1963 Census of Manufactures on the amount of baking powder manufactured in such establishments.

[4]Includes cooking and baking chocolate, powdered cocoa, and chocolate sirups made from purchased chocolate. Chocolate products made in establishments that grind cocoa beans are classified in Industry 2072, Chocolate and Cocoa Products. Figures on total shipments of specific chocolate products regardless of where made are included in table 3 for Industry 2072, Chocolate and Cocoa Products.

[5]For 1963, data for code 2099911 are included with code 2099900 in order to avoid disclosing data for individual companies.

[6]For 1958, data for code 2099965 include a small undetermined amount of cracker sandwiches made from purchased crackers, the bulk of which was probably included with product code 2099900. For 1963, data for cracker sandwiches made from purchased crackers were collected separately under product code 2099991.

[7]In 1958, separate data for these products were not collected. A review of the 1958 reports for some of the large producers indicated that the 1958 data were probably included with product code 2099900.

BCD...

a unique tool for economic analysis

BUSINESS CYCLE DEVELOPMENTS is published monthly for specialists concerned with the analysis of current business conditions. It summarizes many of the available economic time series in convenient form for short-term evaluation and interpretation and supplements other Department of Commerce reports on the economy. The features of this report are:

- The arrangement of series according to their usual timing relations during the course of the business cycle.
- The inclusion of special analytical measures and historical cyclical comparisons that help in evaluating the current stage of the business cycle.
- The speed with which the data are collected, assembled, and published. BCD is issued about the 22d of each month covering data for the preceding month.

About 90 principal indicators and over 300 components are used for the different measures shown. The movements of the series are shown against the background of the expansions and contractions of the general business cycle so that "leads" and "lags" can readily be detected and unusual cyclical developments spotted. Since almost all of the basic data presented in this report are available in other published sources, the value of BCD lies in its analytical arrangement and speed of publication.

The presentation and classification of the time series in the BCD report follows the business indicators approach. The classification of series and the business cycle turning dates are those designed by the National Bureau of Economic Research which, in recent years, has been a leader in this field of investigation.

1963 CENSUS OF MANUFACTURES

MC63(P)-21A-1

INDUSTRY SERIES

preliminary report

Cigarettes SIC Code 2111

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Cigarette Industry produced products valued at $2,655 million, an increase of 20 percent over 1958, according to preliminary results obtained from the 1963 census. Value added by manufacture amounted to $1,310 million in 1963, an increase of 22 percent from 1958 and 5 percent from 1962.

Average employment in this industry of 35.6 thousand employees showed an increase of 5 percent since 1958 and was approximately equal to the 1962

Table 1.—GENERAL STATISTICS FOR THE CIGARETTE INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(NA) Not available. (X) Not applicable. rRevised.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]For 1959 and subsequent years, the activities of some chewing and smoking tobacco departments were included in the overall report for the cigarette establishments where these activities were conducted at one location. Prior to 1959, separate reports were received for the chewing and smoking departments of cigarettes plants. These reports accounted for 3 to 6 percent of the 1959 employment of the Cigarette Industry.

[4]Data for Alaska and Hawaii are not included.

[5]The decrease in number of establishments from 1947 to 1954 reflects, in part, combined reports in 1954 for operations at a single location which had been reported separately in 1947, as well as the inclusion in retail and wholesale trade of certain small establishments producing cigarettes on a custom basis, in addition to their merchandising operations. (These establishments were included in manufacturing in 1947.)

March 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

employment level. The increase since 1958 was primarily due to a change in reporting. Beginning in 1959, the activities of some smoking and chewing tobacco departments were included in the overall report for the cigarette establishment where these activities were conducted at one location. Prior to 1959, separate reports were received for the chewing and smoking departments of cigarette plants. The inclusion of the chewing and smoking departments' reports accounted for 3 to 6 percent of the 1959 employment of the cigarette industry. Thus, the data since 1959 are not completely comparable to the prior information.

The Cigarette Industry includes establishments engaged primarily in the manufacture of cigarettes.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of production (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of production for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of production which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF PRODUCTION

The value of production reported by establishments classified in the Cigarette Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of production and other receipts of establishments classified in the Cigarette Industry amounted to $2,655 million. Of this total, $88 million were products primary to other industries; and $2 million were receipts for miscellaneous activities. The industry production of primary products represented 97 percent of the total manufactured products produced, primary and secondary. The 1958 ratio was 99 percent.

The total value of production for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $2,568 million of cigarettes were produced by all producers of these products. Of this total, $2,566 million, or virtually 100 percent, were produced by plants classified in Industry 2111, Cigarettes, while the remainder was produced by plants classified in other industries. The 1958 percentage was also 100 percent.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity

figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of production, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE CIGARETTE INDUSTRY, BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2111)

Geographic area	1963[1]											1958

1963 CENSUS OF MANUFACTURES

MC63(P)-21A-2

INDUSTRY SERIES

preliminary report

Cigars SIC Code 2121

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Cigar Industry produced products valued at $358 million, an increase of 1 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 29 percent from 1958 and 6 percent from 1962 to a total of 20.7 thousand employees in 1963. Value added by manufacture amounted to $194 million in 1963, an increase of 6 percent from 1958 and a decrease of 3 percent from 1962.

The Cigar Industry includes establishments engaged primarily in the manufacture of cigars.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The Census of manufactures is conducted by obtaining a separate report for each establishment

Table 1.—GENERAL STATISTICS FOR THE CIGAR INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2121)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of production	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]

(NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

March 1965

in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of production (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of production for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of production which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF PRODUCTION

The value of production reported by establishments classified in the Cigar Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of production and other receipts of establishments classified in the Cigar Industry amounted to $358 million. Of this total, $5 million were products primary to other industries; and $3 million were receipts for miscellaneous activities. The industry production of primary products represented 99 percent of the total manufactured product produced, primary and secondary. The 1958 ratio was 100 percent.

The total value of production for the industry (i.e., the total value of receipts of establishments classified in the industry) should be distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $353 million of cigars were produced by all producers of these products. Of this total, $351 million, or 99 percent, were produced by plants classified in the Cigar Industry, 2121, while the remainder was produced by plants classified in other industries. The 1958 ratio was 100 percent.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of production, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing

industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

INDUSTRY SERIES

preliminary report

Chewing and smoking tobacco

SIC Code 2131

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Chewing and Smoking Tobacco Industry produced products valued at $139 million, according to preliminary results obtained from the 1963 census. Average employment in this industry was 4,058 and the value added by manufacture amounted to $74 million during 1963.

Data for 1963 are not closely comparable to information published for prior years. For 1963, the activities of some chewing and smoking tobacco departments were included in the overall report for the cigarette establishment where these activities were conducted at one location. Prior to 1963, separate reports were received for the chewing and smoking departments of cigarette plants. These reports accounted for 20 to 30 percent of the 1958 employment of the Chewing and Smoking Tobacco Industry.

The Chewing and Smoking Tobacco Industry includes establishments engaged primarily in the manufacture of smoking tobacco (pipe), chewing tobacco and snuff.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing

establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of production (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF PRODUCTION

The value of production reported by establishments classified in the Chewing and Smoking Tobacco Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of production and other receipts of establishments classified in the Chewing and Smoking Tobacco Industry amounted to $139 million. Of this total, $5 million were products primary to other industries; and $3 million were receipts for miscellaneous activities. The industry shipments of primary products represented 97 percent of the total manufactured product shipments, primary and secondary.

The total value of production for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $218 million of Chewing and Smoking Tobacco were shipped by all producers of these products. Of this total, $132 million, or 61 percent, were shipped by plants classified in Industry 2131, Chewing and Smoking Tobacco, while the remainder was shipped by plants classified in other industries, primarily the cigarette industry. The comparable ratio for 1958 is 88 which reflects the separate reporting mentioned above.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary

reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7". Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE CHEWING AND SMOKING TOBACCO INDUSTRY BY REGIONS AND STATES: 1963 AND 1958

(SIC code 2131)

INDUSTRY SERIES

preliminary report

Tobacco stemming and redrying

SIC Code 2141

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Tobacco Stemming and Redrying Industry produced products valued at $1,366 million, an increase of 16 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 14 percent from 1958 to a total of 17 thousand employees in 1963. Value added by manufacture amounted to $104 million in 1963, an increase of 21 percent from 1958.

The Tobacco Stemming and Redrying Industry includes establishments engaged primarily in stemming and redrying tobacco. Establishments which primarily buy and sell leaf tobacco as merchant wholesalers, agents, or brokers are not included in this industry, although they may also be engaged in stemming and/or redrying tobacco. Such establishments are classified in Wholesale Trade.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE TOBACCO STEMMING AND REDRYING INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2141)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of production	Capital expenditures, new [1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	136	110	16,972	61,132	14,530	28,332	43,112	104,380	1,260,254	1,366,290	13,273
1958	144	122	14,937	46,662	12,902	26,564	34,530	85,578	1,086,580	1,176,710	19,772

1947[3]	163	(NA)	25,901	43,614	23,499	45,489	34,314	72,223	885,584	957,807	12,131

(NA) Not available.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.

[3] Data for Alaska and Hawaii are not included.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. The figures for production workers, 1954-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958 and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of production (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of production for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of production which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF PRODUCTION

The value of production reported by establishments classified in the Tobacco Stemming and Redrying Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of production and other receipts of establishments classified in the Tobacco Stemming and Redrying Industry amounted to $1,366 million. Of this total, $246 million were products primary to other industries and receipts for miscellaneous activities primarily resales and contract receipts. The industry production of primary products represented 100 percent of the total manufactured products produced, primary and secondary. The 1958 ratio was 100 percent.

The total value of production for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $1,126 million of stemmed and redried tobacco were produced by all producers of these products. Of this total, $1,120 million, or 99 percent, were shipped by plants classified in Industry 2141, Tobacco Stemming and Redrying, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 100 percent.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of production divided by quantity of production) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of production of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of production, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the production by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE TOBACCO STEMMING AND REDRYING INDUSTRY, BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2141)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of production	Capital expenditures, new	All employees, number	Value added by manufacture

1963 CENSUS OF MANUFACTURES

MC63(P)-22A-1

INDUSTRY SERIES

preliminary report

Weaving mills, cotton SIC Code 2211

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Cotton Weaving Mills shipped products valued at $3,090 million, an increase of 12 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 16 percent from 1958 and 7 percent from 1962 to a total of 207.9 thousand employees in 1963. Value added by manufacture amounted to $1,250 million in 1963, an increase of 16 percent from 1958 and a decrease of 7 percent from 1962.

Cotton Weaving Mills include establishments engaged primarily in weaving fabrics over 12 inches in width, wholly or chiefly of cotton.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and 1947.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing

(NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. The figures for production workers, 1954, and 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Cotton Weaving Mills consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Cotton Weaving Mills amounted to $3,090 million. Of this total, $405 million were products primary to other industries; and $82 million were receipts for miscellaneous activities. The industry shipments of primary products represented 87 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 94 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $3,456 million of cotton gray and finished goods and fabricated products were shipped by all producers of these products. Of this total, $2,603 million, or 75 percent, were shipped by plants classified in Industry 2211, Cotton Weaving Mills, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 82 percent.

COMPARABILITY OF CENSUS AND CURRENT SURVEY DATA

The Census Bureau also conducts a number of current surveys of textile mills. The data relating to the product information shown in table 3A are published in the following Current Industrial Reports Series:

M22T.1	Cotton Broad Woven Goods
M22S	Cotton, Silk, and Man-made Fiber Woven Goods finished
M23X	Sheets, Pillowcases, and Towels

The gray goods summary data published in Series M22T are shown in a footnote to table 3A and are directly comparable to the information shown in table 3A of this report. Significant differences reported for cotton duck and napped fabrics will be reviewed prior to the issuance of the final census report.

The finished fabric data are directly comparable to the information published in Series M22S except that the data shown in table 3A exclude commission finishing. This information will be included in the report for Industry 2261, Cotton Finishing Plants.

The sheets, pillowcases and towels data are also comparable to the information previously published in Series M23X. However, the 1958 data as published in the census were revised when issued in the MA-23X report. In the 1958 census, separate reports were received for each manufacturing plant. In some cases, a manufacturing plant produced sheets, pillowcases, or towels on commission for another office of the company or for another company. In such cases, the manufacturing plant reported the quantity of products produced and commission receipts for work performed. Where the other office for whom the products were made did

not perform any manufacturing operations, the establishment, such as a selling office, was excluded from the Census of Manufactures. Consequently, the 1958 data representing shipments from manufacturing plants understated the shipments data for individual products.

In order to obtain 1958 data comparable to that shown for later years, the 1958 data were revised for plants producing products for the account of nonmanufacturing establishments.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in this or associated industries or areas, or (b) because the industry was of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on this industry.)

[1]Less than $500 thousand.

22110 00	Cotton broad-woven fabrics, finished cotton fabrics, etc., not specified by kind	...	(X)	(X)	15,950	(X)	(X)	20,779

Note: Gray goods produced and consumed include fabrics woven and finished in the same establishment.
- Represents zero. n.e.c. Not elsewhere classified. (D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available. (X) Not applicable. r Revised.

[1]Data for selected fabricated products that are made in significant amounts from cotton fabrics at cotton weaving mills are shown in this table. Data for other fabricated products such as bags, tents, housefurnishings, etc., which are also made at weaving mills but not by a large number of plants are shown in the reports for industries in SIC group 239.

[2]Production data for gray goods are collected on a quarterly basis and Current Industrial Reports Series M22T.1 includes a detailed breakdown by type of fabric. Because of reporting differences by individual companies, and some misclassification of fabrics, the data shown in this report differ from that published in the current survey. The summary figures as published in Current Industrial Reports Series M22T.1 are shown here, however, for comparative purposes.

Code	Product	Total production Census Survey M22T (1,000 lin. yds.)
22111 10	Cotton duck and allied fabrics (including combed duck)	212,788
22112 10	Cotton sheeting and allied coarse and medium yarn fabrics	2,394,351
22113 10	Cotton print cloth yarn fabrics	2,979,475
22114 --	Cotton colored yarn fabrics, toweling, and dishcloth fabrics and napped cotton fabrics, including blanketing, total	1,203,466
22114 10	Cotton colored yarn fabrics	435,861
22114 31	Cotton toweling and dishcloth fabrics	617,539
22114 51	Napped cotton fabrics and blanketing	150,066
22115 10	Fine cotton fabrics (combed, part combed, and fine carded)	1,519,881
22116 10	Other woven cotton fabrics and specialties	449,331

[3]Excludes quantity data for other finished fabrics and finished fabrics not specified by kind.
[4]See text "Comparability of Census and Current Survey Data."
[5]In the industry report for bedspreads and bed sets (S.I.C. 2392), data are reported for man-made fiber bedspreads and bed sets. Such data are excluded from this report.

1963 CENSUS OF MANUFACTURES

MC63(P)-22A-2

INDUSTRY SERIES

preliminary report

Weaving mills, synthetics

SIC Code 2221

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Weaving Mills, Synthetics shipped products valued at $1,722 million, an increase of 45 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 8 percent from 1958 and 6 percent from 1962 to a total of 88.1 thousand employees in 1963. Value added by manufacture amounted to $661 million in 1963, an increase of 41 percent from 1958 and 16 percent from 1962.

Weaving Mills, Synthetics include establishments engaged primarily in weaving fabrics over 12 inches in width, wholly or chiefly of silk and man-made fibers including glass.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.--GENERAL STATISTICS FOR SYNTHETIC WEAVING MILLS IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2221)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]

(NA) Not available. (X) Not applicable. rRevised.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Weaving Mills, Synthetics consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Weaving Mills, Synthetics amounted to $1,722 million. Of this total, $181 million were products primary to other industries; and $44 million were receipts for miscellaneous activities. The industry shipments of primary products represent 89 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 85 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $1,748 million of man-made fiber and silk gray and finished goods and blankets were shipped by all producers of these products. Of this total, $1,497 million, or 86 percent, were shipped by plants classified in Industry 2221, Weaving Mills, Synthetics while the remainder was shipped by plants classified in other industries. The 1958 ratio was 88 percent.

COMPARABILITY OF CENSUS AND CURRENT SURVEY DATA

The Census Bureau also conducts a number of current surveys of textile mills. The data relating to the product information shown in table 3 are published in the following Current Industrial Reports Series:

M22T.2 Man-Made Fiber Broad Woven Goods
MA-22S Cotton, Silk, and Man-Made Fiber Woven Goods Finished

The gray goods summary data published in Series M22T are shown in a footnote to table 3 and are directly comparable to the information shown in table 3 of this report. There were some differences in the classification of fabrics as reported in the census and in the current survey. These will be reviewed more fully prior to the issuance of the final Census report.

The finished fabric data are directly comparable to the information published in Series MA-22S except that the data shown in table 3 exclude commission finishing. This information will be included in the report for Industry 2262, Synthetic Finishing Plants.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also

their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Note: Gray goods produced and consumed include fabrics woven and finished in the same establishment.
- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
[1]Production data for gray goods are collected on a quarterly basis and Current Industrial Report Series M22T.2 includes a detailed breakdown by type of fabric. Because of reporting differences by individual companies and some misclassification of fabrics, the data shown in this report differ from that published in the current survey. The summary figures as published in Current Industrial Report Series M22T.2 are shown here, however, for comparative purposes.

Code	Product	Total production Census Survey M22T (1,000 lin. yds.)
22211 15	Rayon and/or acetate pile, upholstery, tie and blanketing fabrics	309,944
22212 10	100% filament rayon and/or acetate fabrics	660,167
22213 10	100% spun rayon and/or acetate	300,703
22214 10	Combination filament and spun 100% rayon and/or acetate	102,624
22215 12	Rayon and/or acetate mixtures with other fibers (gray goods), except blanketing, pile, upholstery, drapery, and tapestry fabrics	353,032
22216 10	Nylon and chiefly nylon fabrics	293,742
22217 12	Silk and man-made fiber fabrics, except rayon, acetate, or nylon	1,040,473

The total production data for 1958 are from the Current Industrial Reports.
[2]Excludes quantity data for fabrics finished on commission, finished fabrics other than bleached, dyed, or printed, and finished fabrics not specified by kind. The 1958 data are adjusted to the information published in the Current Industrial Reports.

1963 CENSUS OF MANUFACTURES

MC63(P)-22A-3

INDUSTRY SERIES

preliminary report

Weaving, finishing mills, wool

SIC Code 2231

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Wool Weaving and Finishing Industry shipped products valued at $1,018 million, an increase of 10 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 15 percent from 1958 and 5 percent from 1962 to a total of 47.6 thousand employees in 1963. Value added by manufacture amounted to $392 million in 1963, an increase of 16 percent from 1958 and a decrease of 1 percent from 1962.

The Wool Weaving and Finishing Industry includes establishments engaged primarily in weaving fabrics over 12 inches in width, wholly or chiefly by weight of wool, mohair, or similar animal fibers; dyeing and finishing woven wool fabrics or dyeing wool, tops, or yarn; and shrinking or sponging wool goods for the trade.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

(NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that comparable data for prior years are not available.

June 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963, value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Wool Weaving and Finishing Plants consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Wool Weaving and Finishing Plants amounted to $1,018 million. Of this total, $147 million were products primary to other industries; and $33 million were receipts for miscellaneous activities. The industry shipments of primary products represent 85 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 94 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $881 million of wool broad-woven fabrics and related products were shipped by all producers of these products. Of this total, $838 million, or 95 percent, were shipped by plants classified in Industry 2231, Wool Weaving and Finishing Plants, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 96.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Note: Gray goods produced and consumed include fabrics woven and finished in the same establishment.

Production data for gray goods are also collected quarterly on Census Form M22T and published in Current Industrial Reports Series M22T.3, Wool Broad Woven Goods. In the M22T survey, "production" represents cloth woven during the period and is reported in equivalent finished linear yards. Production as reported in the census of manufactures differed from the M22T concept for several reasons; the census of manufactures data frequently were reported in actual yards, the finished fabrics data represented the quantity of fabrics finished for own account rather than the quantity woven, thus excluding the amount finished on commission and the census of manufactures reports sometimes covered fiscal years rather than the calendar periods. The summary figures as published in Current Industrial Reports Series M22T.3 are shown below:

Product code	Product	Unit of measure	Total production	
			1963	1958
22312 10	Woolen and worsted apparel fabrics	1,000 fin. lin. yds.	273,939	262,216
22312 30	Woolen and worsted nonapparel fabrics	...do.....	10,466	9,124
22312 50	Woven wool felts	1,000 lbs.....	8,562	8,340

(D) Withheld to avoid disclosing figures for individual companies. (X) Not applicable. rRevised.

1963 CENSUS OF MANUFACTURES

MC63(P)-22A-4

INDUSTRY SERIES

preliminary report

Narrow fabric mills

SIC Code 2241

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Narrow Fabric Mills shipped products valued at $352 million, an increase of 17 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 4 percent from 1958 to a total of 23 thousand employees in 1963. Value added by manufacture amounted to $173 million in 1963, an increase of 21 percent from 1958.

Narrow Fabric Mills include establishments engaged primarily in the manufacture of weaving or braiding fabrics 12 inches or narrower in width of cotton, wool, silk, and man-made fibers, including glass fibers. Establishments primarily engaged in covering rubber thread are also included in this industry.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE NARROW FABRIC MILLS IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2241)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[2]
	Total[1]	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	379	216	23,495	93,337	20,928	41,113	74,867	172,942	179,347	352,150	6,985
1958	488	242	24,587	85,923	21,534	42,592	65,225	142,638	157,879	301,482	6,307
1954[4]	513	252	25,676	79,063	22,862	44,962	61,456	124,013	138,974	263,391	4,802

1939	400	(NA)	(NA)	(NA)	24,591	(NA)	21,092	47,319	39,293	86,612	(NA)

(NA) Not available.

[1] A review of the reports for 1958 indicated that a large number of small establishments were misclassified as to industry and included in this industry. This would not significantly affect the statistics other than the number of establishments.

[2] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4] Data for Alaska and Hawaii are not included.

March 1965

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Narrow Fabric Mills consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Narrow Fabric Mills amounted to $352 million. Of this total, $44 million were products primary to other industries; and $18 million were receipts for miscellaneous activities. The industry shipments of primary products represented 87 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 94 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $299 million of Narrow Fabric Mills products were shipped by all producers of these products. Of this total, $289 million, or 97 percent, were shipped by plants classified in Industry 2241, Narrow Fabric Mills, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 97.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments shipping narrow fabrics other than covered rubber thread also report their shipments of products annually on Census Form MA-22G, Narrow Fabrics. The 1963 data as previously published for this survey are shown in table 3A together with the comparable totals reported in the census of manufactures.

In view of the differences between these figures, a review was undertaken of the data reported in each survey. Approximately half of the difference for woven narrow fabrics and virtually all of the difference for braided narrow fabrics resulted from the omission of some plants from the annual survey. These plants are being added to the MA-22G survey for 1964 and revised detailed data for 1963 will be included in the 1964 report for narrow fabrics.

The remaining differences are the result of reporting differences for individual plants furnishing data in both surveys. These are being reviewed with the companies and any revisions that may be necessary to the current survey data will also be included in the 1964 report. Any revisions that may be necessary for the Census of Manufactures report will be included in the final report for this industry.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or

shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-22B-1

INDUSTRY SERIES

Hosiery

SIC Codes 2251 and 2252

preliminary report

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Hosiery Industries shipped products valued at $1,060 million, an increase of 12 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in these industries showed a decrease of 8 percent from 1958 and 7 percent from 1962 to a total of 95 thousand employees in 1963. Value added by manufacture amounted to $488 million in 1963, an increase of 5 percent from 1958.

Industry 2251, Women's Hosiery, Except Socks, includes establishments engaged primarily in knitting, dyeing, or finishing women's and misses' full-length and knee-length hosiery, both seamless and full-fashioned.

Industry 2252, Hosiery, N.E.C., includes establishments engaged primarily in knitting, dyeing, or finishing hosiery, except women's and misses' full-length and knee-length seamless and full-fashioned hosiery.

Prior to 1963, Industry 2251 included establishments engaged primarily in the production of full-fashioned hosiery, while Industry 2252 consisted of establishments engaged primarily in the production of all seamless hosiery. For 1963, the Standard Industrial Classifications for the hosiery mills were revised to include in Industry 2251 mills engaged primarily in producing women's hosiery, except socks, and in Industry 2252 mills engaged primarily in producing all other hosiery.

The 1963 data are not comparable with previously published data for the individual Industries 2251 and 2252. The historical data are comparable, however, on a combined basis for general statistics shown in tables 1, 2A, and 2B. The detailed product statistics presented in table 3 are not significantly affected.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all

August 1965

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Women's Hosiery, Except Socks, Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Women's Hosiery, Except Socks, Industry amounted to $601 million. Of this total, $18 million were products primary to other industries; and $31 million were receipts for miscellaneous activities. The industry shipments of primary products represent 97 percent of the total manufactured product shipments, primary and secondary.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $586 million of women's hosiery, except socks, were shipped by all producers of these products. Of this total, $552 million, or 94 percent, were shipped by plants classified in Industry 2251, Women's Hosiery, Except Socks, while the remainder was shipped by plants classified in other industries.

The total value of shipments and other receipts of establishments classified in the Hosiery, N.E.C., Industry amounted to $458 million. Of this total, $90 million were products primary to other industries; and $31 million were receipts for miscellaneous activities. The industry shipments of primary products represent 79 percent of the total manufactured product shipments, primary and secondary.

The total value of primary products of the industry shipped by all producers, appearing in table 3, indicates that $403 million of hosiery, n.e.c., were shipped by all producers of these products. Of this total, $383 million, or 95 percent, were shipped by plants classified in Industry 2252, Hosiery, N.E.C., while the remainder was shipped by plants classified in other industries.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1, 2A, and 2B are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1, 2A, and 2B) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 1.—GENERAL STATISTICS FOR THE HOSIERY INDUSTRIES IN THE UNITED STATES FOR SELECTED YEARS

(SIC codes 2251 and 2252)

SIC code	Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments	Capital expenditures, new[2]	Standard error of estimate (percent) for number of employees column[3]
		Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)	
2251	Women's hosiery, except socks:

(NA) Not available. (X) Not applicable.

[1]See text regarding comparability of 1963 data with earlier years.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimtes and complete canvass totals because of sampling fluctuations. See the annual survey of manufactures volumes for further discussion of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

[5]For years prior to 1958, data for cost of materials and value of shipments were not shown because of duplication in these items. For 1958-1963 these data are published, although there is duplication in the figure for cost of materials and value of shipments. This duplication arises since some plants in the industry ship greige goods to other plants in the industry where they are finished and sold.

Table 2A.—GENERAL STATISTICS FOR THE HOSIERY INDUSTRIES BY GEOGRAPHIC AREAS: 1963

(SIC codes 2251 and 2252)

- Represents zero. (NA) Not available. (X) Not applicable.

[1]For 1963, includes less than 5 percent of knee-length hosiery combined with full-length stretch hosiery in order to avoid disclosing individual company operations.

[2]For 1958, data for women's and misses' finished seamless knee-length socks (including Campus, Bermudas, etc.) were not collected separately, and are included in "All other yarns and mixtures, including seamless stretch tights," product code 2251398.

[3]For 1958, seamless stretch tights and leotards were included in "Women's and misses' finished seamless stockings, not specified by kind," product code 2251300.

[4]For 1963, includes women's and misses' full-fashioned hosiery shipped in the greige, not specified by kind, in order to avoid disclosing operations of individual companies.

[5]For 1958, data for women's and misses' seamless knee-length socks (including Campus, Bermudas, etc.) were not collected separately and are included in the figures shown for combined product codes 2251523 and 2251529.

[6]For 1958, women's seamless hosiery, not specified by kind, was included in 1958 product code 2252000 or 2252400.

[7]For 1958, data for men's bundle goods were collected as a separate item, but no fiber detail was collected. For 1963, bundle goods are included with men's half-hose figures, by fiber.

[8]For 1958, men's and boys' anklets were collected as a combined item and without a breakdown by fiber. This information is included with men's finished seamless hosiery, code 2252230.

[9]Quantity data estimated based on the unit-value relationship reported for other products in the product class.

[10]For 1958, "Children's and infants' socks, including ribbed hosiery" were reported as a combined item, which is included in product code 2259398, "All other finished seamless hosiery."

[11]For 1958, no separate data were collected for misses' and children's athletic and crew socks. These are included in product codes 2251195, 2251398, and 2252298.

[12]For 1963, includes less than 5 percent of partially finished for sale to the trade in order to avoid disclosing individual company data.

You can keep pace with a growing America . . .

MC63(P)-22B-2

INDUSTRY SERIES

Knitting mills, n.e.c. SIC Code 2259

preliminary report

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Knitting Mills, N.E.C., Industry shipped products valued at $39 million, an increase of 29 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 9 percent from 1958 to a total of 3.5 thousand employees in 1963. Value added by manufacture amounted to $19.5 million in 1963, an increase of 34 percent from 1958.

The Knitting Mills, N.E.C., Industry includes establishments engaged primarily in knitting gloves and other articles, not elsewhere classified.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and 1947.

Table 1.—GENERAL STATISTICS FOR THE KNITTING MILLS, N.E.C., INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2259)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	78	43	3,522	11,970	3,114	5,885	9,558	19,502	19,404	38,811	288
1958	75	38	3,230	9,619	2,765	4,873	7,130	14,543	15,672	30,092	255

1947[4]	88	(NA)	5,774	10,722	5,427	(NA)	9,260	17,724	17,295	34,905	(NA)

(NA) Not available.

[1] See text regarding comparability of 1963 data with earlier years.

[2] Includes expenditures for plants under construction but not in operation. This information was not collected in 1947 and is not available by 4-digit industry for 1954.

[3] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4] Data for Alaska and Hawaii are not included.

July 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. The figures for production workers, 1958 and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for 1947 it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments or value added by manufacture data shown in table 1.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Knitting Mills, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Knitting Mills, N.E.C., Industry amounted to $39 million. Of this total, $2 million were products primary to other industries; and $3 million were receipts for miscellaneous activities including commission receipts for work done for others. The industry shipments of primary products represent 95 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 91 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $38 million of knit products, n.e.c., were shipped by all producers of these products. Of this total, $34 million, or 89 percent, were shipped by plants classified in Industry 2259, Knitting Mills, N.E.C., while the remainder was shipped by plants classified in other industries. The comparable ratio for 1958 was 85 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports

will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE KNITTING MILLS, N.E.C., INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2259)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)		($1,000)
United States, total	78	43	3,522	11,970	3,114	5,885	9,558	19,502	19,404	38,811	288	3,230	14,543
Northeast	52	27	1,650	6,071	1,446	2,719	4,546	10,635	11,245	21,702	(2)	1,928	9,367
Pennsylvania	11	6	361	1,438	320	615	1,059	2,393	3,264	5,658	(2)	482	2,721
North Central	8	8	1,366	4,457	1,208	2,343	3,799	6,262	5,806	12,150	(2)	987	3,841
South and West	18	8	506	1,442	460	823	1,213	2,605	2,353	4,959	(2)	315	1,335

Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in this or associated industries or areas, or (b) because the industry was of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on this industry.)

[1]See text regarding comparability of 1963 and 1958 data.

[2]Less than $500 thousand.

Table 3.—QUANTITY AND VALUE OF KNIT PRODUCTS, N.E.C., SHIPPED BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Includes quantity and value of these products reported not only by establishments classified in the Knitting Mills, N.E.C., Industry but also by establishments making these items as "secondary" products in other industries. See text under "Value of Shipments")

Product code	Product	Total shipments including interplant transfers[1]			
		1963		1958	
		Quantity (1,000 dozen pairs)	Value ($1,000)	Quantity (1,000 dozen pairs)	Value ($1,000)
2259- --	Knit products, n.e.c., made by knitting mills, total[2]	(X)	38,378	(X)	31,367
22590 10	Knit dress and semidress gloves, including knit fabrics and leather combinations[3]	1,014	10,733	(NA)	8,765
22590 71	Knit work gloves and mittens, including knit fabrics and leather combinations[3]	596	3,200	(NA)	1,593
22590 98	Other knit products, n.e.c.	(X)	22,260	(X)	21,009
22590 00	Other knit products, including commission receipts for making knit gloves and mittens, not specified by kind	(X)	2,185	(X)	(X)

n.e.c. Not elsewhere classified. (NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text).

[2]The data in this table are only for products made in knitting mills, not elsewhere classified, and do not include the following types of knit products made in knitting mills which are being published in separate reports for the industries indicated.

Women's hosiery, except socks	SIC 2251
Hosiery, n.e.c.	SIC 2252
Knit outerwear mills	SIC 2253
Knit underwear mills	SIC 2254
Knit fabric mills	SIC 2256

[3]Includes only knit gloves and mittens made in knitting mills. The total shipments of these products, including the output by cut-and-sew shops from purchased fabric, are shown in the report for Industry 2381, "Fabric Dress and Work Gloves."

1963 CENSUS OF MANUFACTURES

MC63(P)-228.3

INDUSTRY SERIES

preliminary report

Knit outerwear mills SIC Code 2253

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Knit Outerwear Mills shipped products valued at $1,045 million, an increase of 14 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 12 percent from 1958 and 1 percent from 1962 to a total of 68.0 thousand employees in 1963. Value added by manufacture amounted to $466 million in 1963, an increase of 37 percent from 1958 and 6 percent from 1962.

Knit Outerwear Mills include establishments engaged primarily in knitting outerwear from yarn, or in manufacturing outerwear from knit fabric produced in the same establishment. Establishments primarily engaged in hand knitting outerwear for the trade are included in this industry. Establishments primarily engaged in manufacturing woven or purchased knit fabric gloves and mittens are classified in Industry 2381, and those manufacturing outerwear from purchased knit fabric in Major Group 23.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report

(NA) Not available. (X) Not applicable. r Revised.

[1] See text regarding comparability of 1963 data with earlier years.

[2] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4] Data for Alaska and Hawaii are not included.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS,

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in a decrease of 4 million dollars, or approximately 1 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Knit Outerwear Mills consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Knit Outerwear Mills amounted to $1,045 million. Of this total, $28 million were products primary to other industries; and $168 million were receipts for miscellaneous activities including commission receipts for work done for others. The industry shipments of primary products represented 90 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 91 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The data shown in table 3 show the output of limited outerwear produced by all knitting mills. The output of outerwear made from purchased knit fabric by cut-and-sew establishments is excluded from this table. However, the totals for both knitting mills and cut-and-sew establishments will be shown in the separate industry reports as listed in footnote 2, table 3.

The total value of knit outerwear made in knitting mills, as shown in table 3, amounted to $819 million. Of this total, $791 million, or 97 percent, were shipped by plants classified in Industry 2253, Knit Outerwear Mills, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 96.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which

show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

(NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report "Value of shipments" in 1963 and "Value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text).

[2]The data included in this table are only for products made by knitting mills. The 1963 and 1958 quantity and value data for each of the products, including output of the cut-and-sew establishments, will be shown in the following preliminary publications:

Sweaters, jackets and jerseys:
Men's and boys' - Industry 2329
Women's, misses', and juniors' - Industry 2339
Girls', children's, and infants' - Industry 2369

Knit outerwear sport shirts:
Men's and boys' - Industry 2321
Women's, misses', and juniors' - Industry 2331
Girls', children's, and infants' - Industry 2361

Other knit outerwear:
Men's and boys' - Industry 2329
Women's, misses', and juniors' - Industry 2339
Girls', children's, and infants' - Industry 2369

[3]Quantity estimated based on the unit value relationship reported for other products in the product class.

[4]Commission receipts are not included in the total shown for knit outerwear made by knitting mills.

1963 CENSUS OF MANUFACTURES

MC63(P)-22B-4

INDUSTRY SERIES

preliminary report

Knit underwear mills SIC Code 2254

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, Knit Underwear Mills shipped products valued at $394 million, an increase of 27 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 5 percent from 1958 and 6 percent from 1962 to a total of 30.7 thousand employees in 1963. Value added by manufacture amounted to $183 million in 1963, an increase of 25 percent from 1958 and 16 percent from 1962.

Knit Underwear Mills include establishments engaged primarily in knitting underwear and nightwear from yarn, or in manufacturing underwear and nightwear from knit fabric produced in the same establishment. Establishments primarily engaged in manufacturing underwear and nightwear from purchased knit fabric are classified in Major Group 23.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

(NA) Not available. (X) Not applicable. [r]Revised.

[1]See text regarding comparability of 1963 data with earlier years.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments or value added data shown in table 1.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Knit Underwear Mills consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Knit Underwear Mills amounted to $394 million. Of this total, $66 million were products primary to other industries; and $22 million were receipts for miscellaneous activities including commission receipts for work done for others. The industry shipments of primary products represented 82 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 89 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The data shown in table 3, show the output of knit underwear and nightwear shipped by all knitting mills. The output of underwear and nightwear made from purchased knit fabric by cut-and-sew establishments is excluded from this table. However, the totals for both knitting mills and cut-and-sew establishments will be shown in the separate industry reports as listed in footnote 2, table 3. The total value of knit underwear and nightwear made in knitting mills, as shown in table 3, amounted to $334 million. Of this total, $306 million, or 91 percent, were shipped by plants classified in Industry 2254, Knit Underwear Mills, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 89.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Agregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also

their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

INDUSTRY SERIES

preliminary report

Knit fabric mills SIC Code 2256

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, Knit Fabric Mills shipped products valued at $800 million, an increase of 64 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 33 percent from 1958 and 20 percent from 1962 to a total of 24 thousand employees in 1963. Value added by manufacture amounted to $245 million in 1963, an increase of 66 percent from 1958 and 20 percent from 1962.

Knit Fabric Mills include establishments engaged primarily in knitting tubular or flat fabric, and in dyeing or finishing knit fabric.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

INDUSTRY SERIES

preliminary report

Knit fabric mills SIC Code 2256

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, Knit Fabric Mills shipped products valued at $800 million, an increase of 64 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 33 percent from 1958 and 20 percent from 1962 to a total of 24 thousand employees in 1963. Value added by manufacture amounted to $245 million in 1963, an increase of 66 percent from 1958 and 20 percent from 1962.

Knit Fabric Mills include establishments engaged primarily in knitting tubular or flat fabric, and in dyeing or finishing knit fabric.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment

BUREAU OF THE CENSUS, A. Ross Eckler, Director

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Knit Fabric Mills consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Knit Fabric Mills amounted to $800 million. Of this total, $81 million were products primary to other industries; and $94 million were receipts for miscellaneous activities including commission receipts for work done for others. The industry shipments of primary products represent 89 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 94 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $720 million of knit fabrics were shipped by all producers of these products. Of this total, $624 million, or 87 percent, were shipped by plants classified in Industry 2256, Knit Fabric Mills, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 90.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses

of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

[1]For 1963 and 1958, only summary figures were collected for the quantity and value of total knit cloth shipments, including interplant transfers. Detailed shipments of knit cloth for sale during 1963 and 1958 were collected on Census Annual Form MA-22K, "Knit Cloth for Sale," and are shown in table 3B. However, the data in table 3B are not directly comparable to the summary data in table 3A due to the inclusion of interplant transfers in table 3A.

Table 3B.—TOTAL SHIPMENTS OF KNIT CLOTH FOR SALE: 1963 AND 1958

Product code	Product	Shipments of knit cloth for sale (1,000 pounds)	
		1963[1]	1958[2]
	Finished knit cloth, total	r332,246	201,635
	Warp-knit finished fabrics, including raschel, total	r119,057	63,617
	Underwear and nightwear fabrics, total	82,708	46,305
111	Chiefly nylon	31,985	23,659
112	Cheifly rayon	596	20,864
113	Chiefly acetate	46,651	
119	Other yarns	3,476	1,782
	Corset fabrics, total	10,901	5,094
125	Raschel fabrics	[3]10,901	5,094
129	Other than raschel fabrics		
	Outerwear fabrics, except glove, total	12,856	3,222
131	Chiefly nylon	1,896	1,158
132	Chiefly rayon	404	955
139	Other yarns	10,556	1,109
	Glove fabric, total	2,607	1,901
148	Chiefly cotton	888	730
149	Other yarns	1,719	1,171
158	Toweling, washcloth, and dishcloth fabrics	186	217
165	Netting, including raschel-knit shoe netting	2,797	2,302
168	Knit laces	2,650	2,106
179	Other finished warp-knit fabrics	3,419	2,470
	Warp-knit finished fabrics, including raschel, not specified by kind[4]	933	(X)
	Circular-knit finished fabrics, total	r213,189	147,018
	Underwear and nightwear fabrics, total	21,723	21,769
211	Chiefly cotton	15,869	10,786
212	Chiefly rayon	[3]5,854	10,266
219	Other fibers and mixtures		717
	Outerwear fabrics, except glove, total	118,334	78,831
	Overcoating, topcoating, ski, and snowsuit fabrics, total	30,250	16,176
251	High pile	23,376	
	Other, including fleeces, total	6,874	
255	Chiefly wool	644	16,176
256	Chiefly man-made fibers	[3]6,230	
259	Other fibers and mixtures		
	Dress and suiting fabrics, total	33,503	19,407
263	All wool or chiefly wool	11,922	5,414
261	All cotton	12,149	
262	Chiefly cotton	883	
264	All acrylic	[3]2,462	13,993
265	Chiefly acrylic		
269	Other fibers and mixtures	6,087	
	Knit shirt fabrics, total	49,133	36,549
281	All cotton	37,145	31,781
272	Chiefly cotton	5,441	
283	All wool and chiefly wool	[3]5,638	[3]4,768
284	All acrylic		
285	Chiefly acrylic		
289	Other fibers and mixtures	909	
280	All other outerwear fabrics, except glove	5,448	6,699
	Glove and mitten fabrics, total	13,871	11,024

(X) Not applicable. rRevised.

[1]Detail collected in 1963 on Census Annual Form MA-22K, "Knit Cloth for Sale."

[2]Detail collected in 1958 on Census Annual Form MA-22K, "Knit Cloth for Sale." Revisions to the 1958 data are as published in 1959.

[3]Combined to avoid disclosing figures for individual companies.

[4]Some establishments indicating shipments of knit cloth for sale in the census of manufactures had not been reporting on the Census Annual Form MA-22K. These plants are being added to the MA-22K survey for 1964. Totals have been revised to include these data, and revised detailed data for 1963 will be included in the 1964 report for "Knit Cloth for Sale."

[5]Data on floor covering fabrics are published in Current Industrial Reports Series MA-22Q, "Rugs, Carpets, and Carpeting."

1963 CENSUS OF MANUFACTURES

MC63(P)-22C-1

INDUSTRY SERIES

preliminary report

Finishing plants, cotton

SIC Code 2261

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Cotton Finishing Plants shipped products valued at $874 million, an increase of 22 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 15 percent from 1958 and 2 percent from 1962 to a total of 41.7 thousand employees in 1963. Value added by manufacture amounted to $328 million in 1963, an increase of 12 percent from 1958 and a decrease of 3 percent from 1962.

Cotton Finishing Plants include establishments engaged primarily in finishing purchased cotton broad-woven fabrics, or finishing such fabrics on a commission basis. These finishing operations include bleaching, dyeing, printing (roller, screen, flock, plisse'), and other mechanical finishing such as preshrinking, calendering, and napping. This industry also includes the shrinking and sponging of cloth for the trade, and the chemical finishing for water-repellency, fire-resistance, and mildew-proofing. Weaving mills finishing fabric at the same establishment are classified in the Cotton Weaving Mills Industry, SIC 2211.

This report does not include figures for administrative offices, warehouses, garages, or

Table 1.—GENERAL STATISTICS FOR COTTON FINISHING PLANTS IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2261)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Prior to 1958, the industry was included in old SIC 2261, Finishing Textiles, Except Wool. Therefore, comparable data are not available.

[4]The 1958 data include 148 small finishing plants that did not report sufficient information to properly classify them. A number should have been included in Industry 2262, Synthetic Finishing Plants, or in Industry 2269, Finishing Plants, N.E.C. These plants had 2,991 employees and shipments of $44 million.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963, value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Cotton Finishing Plants consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for resale of products, etc. The total value of shipments and other receipts of establishments classified as Cotton Finishing Plants amounted to $874 million. Of this total, $168 million were products primary to other industries; and $34 million were receipts for miscellaneous activities. The industry shipments of primary products which include commission finishing represented 80 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 85 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that there were $1,113 million of finished cotton broadwoven fabrics, and commission receipts for job finishing of cotton fabrics shipped by all producers of these products. Of this total, $672 million, or 60 percent, were shipped by plants classified in Industry 2261, Cotton Finishing Plants, while the remainder was shipped by plants classified in other industries. In 1958 the comparable ratio was 57 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in

1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR COTTON FINISHING PLANTS BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2261)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture

- Represents zero. (D) Withheld to avoid disclosing information for individual companies. (NA) Not Available. (X) Not applicable.

[1]For fabrics finished on commission, the commission receipts are shown in the value of shipments column.

[2]Data exclude "other finished fabrics" and "finished fabrics not specified by kind." For 1958, census data are adjusted to information published in Current Industrial Reports Series M22S, "Cotton, Silk, and Man-Made Fiber Woven Goods Finished." This report which was also issued for 1963 includes more detailed information by type of fabric and end-use. The comparable totals for 1963 as shown in the M22S report and this report are as follows:

Product	1963 Census of Manufactures	Survey M22S
	(1,000 finished linear yards)	
Finished cotton fabrics, bleached, dyed or printed, total	7,450,539	7,545,981
Bleached and white finished	3,187,453	3,301,529
Plain dyed and finished	2,614,145	2,575,430
Printed and finished	1,648,941	1,669,022

The differences in the two sets of data are primarily due to relatively small reporting differences by a substantial number of companies.

[3]Includes value of finished fabrics, not specified by kind, or commission receipts, not specified by kind. For 1958, the figure includes $44 million for plants included in Industry 2261, Cotton Finishing Plants, although a post tabulation review showed that a number of these plants should have been classified in Industry 2262, Synthetic Finishing Plants, or in Industry 2269, Finishing Plants, N.E.C.

1963 CENSUS OF MANUFACTURES

MC63(P)-22C-2

INDUSTRY SERIES

preliminary report

Finishing plants, synthetic

SIC Code 2262

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Synthetic Finishing Plants shipped products valuedat $326 million, an increase of 55 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 21 percent from 1958 to a total of 19.6 thousand employees in 1963. Value added by manufacture amounted to $179 million in 1963, an increase of 56 percent from 1958.

Synthetic Finishing Plants include establishments engaged primarily in finishing purchased man-made fiber and silk broad-woven fabrics or finishing such fabrics on a commission basis. These finishing operations include bleaching, dyeing, printing (roller, screen, flock, plisse');and other mechanical finishing such as preshrinking, calendering, and napping. Weaving mills finishing fabric at the same establishment are classified in the Synthetic Weaving Mills Industry, SIC 2221.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957

Table 1.—GENERAL STATISTICS FOR SYNTHETIC FINISHING PLANTS IN THE UNITED STATES: 1963 AND 1958

(SIC code 2262)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	197	139	19,605	106,432	16,239	36,495	81,286	179,347	151,432	326,418	13,900
1958[3]	197	132	16,185	74,297	13,650	29,296	57,615	114,825	95,261	210,568	3,607

[1]Includes expenditures for plants under construction but not in operation.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1963 and 1958 are not comparable with those for earlier years.

June 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958 and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958 and 1963, value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Synthetic Finishing Plants consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for resale of products, etc. The total value of shipments and other receipts of establishments classified as Synthetic Finishing Plants amounted to $326 million. Of this total, $34 million were products primary to other industries; and $9 million were receipts for miscellaneous activities. The industry shipments of primary products which include commission finishing represent 89 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 93 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that there were $609 million of finished man-made fiber and silk broad-woven fabrics and commission receipts for job finishing of these fabrics reported by all producers of these products. Of this total, $283 million, or 47 percent, were shipped by plants classified in Industry 2261, Synthetic Finishing Plants, while the remainder was shipped by plants classified in other industries. In 1958 the comparable ratio was 54 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810, covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses

of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.--GENERAL STATISTICS FOR SYNTHETIC FINISHING PLANTS BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2262)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)		($1,000)

See footnotes on page 5.

Footnotes for Industry 2262, Synthetic Finishing Plants

- Represents zero. (D) Withheld to avoid disclosing information for individual companies. (NA) Not available. (X) Not applicable.

[1]For fabrics finished on commission, the commission receipts are shown in the value of shipments column.

[2]Data exclude "other finished fabrics" and "finished fabrics not specified by kind." For 1958, census data are adjusted to information published in Current Industrial Reports Series M22S, "Cotton, Silk, and Man-Made Fiber Woven Goods Finished." This report, which was also issued for 1963, includes more detailed information by type of fabric and end use. The comparable totals for 1963 as shown in the M22S report and this report are as follows:

Product	1963 Census of Manufactures	Survey M22S
	(1,000 finished linear yards)	
Finished man-made fiber and silk fabrics, bleached, dyed, or printed, total	2,697,339	2,361,167
Bleached and white finished	460,804	360,274
Rayon and/or acetate	119,469	84,850
Other man-made fibers and silk	341,335	275,424
Plain dyed and finished	1,771,896	1,689,024
Rayon and/or acetate	1,051,258	1,078,345
Other man-made fibers and silk	720,638	610,679
Printed and finished	464,639	311,869
Rayon and/or acetate	293,382	185,422
Other man-made fibers and silk	171,257	126,447

The differences in the two sets of data are primarily due to the omission of some commission finishing plants from annual survey M22S. These plants finished approximately 225 million yards of fabric in 1963. Reporting differences for individual plants furnishing data in both surveys accounted for the balance of the difference. Such plants frequently were including data for synthetic finished fabric with cotton fabrics. On the census report, the data for each type of fabric were reported separately.

[3]Includes value of finished fabrics, not specified by kind, or commission receipts, not specified by kind.

PUBLICATION PROGRAM 1963 CENSUSES OF MANUFACTURES AND MINERAL INDUSTRIES

Results of the 1963 Censuses of Manufactures and Mineral Industries will be issued initially in preliminary reports which will furnish summary data. These reports will be superseded by more detailed final reports. An outline of the publication program is shown below.

PRELIMINARY REPORTS

Summary Series

Manufactures (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. General statistics will also be presented for industries grouped according to market categories—durable and nondurable goods industries. A second report will provide general statistics without industry detail for regions, States, and large standard metropolitan statistical areas.

Mineral Industries (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. A second report will provide general statistics by 2-digit industry group for regions and States.

Industry Series

Manufactures (about 370 reports). Separate reports for virtually all of the 430 manufacturing industries will give industry totals for general statistics for the United States and for regions and States. A product table in each report will give the quantity and value of shipments of the products classified in the industry for the United States.

Mineral Industries (about 45 reports). Separate reports for industries or for groups of industries for all of the 50 mineral industries will present general statistics for the United States and for regions and States. A product table will give the quantity and value of shipments of the products classified in the industry for the United States and for regions and States.

Area Series

Manufactures (51 reports). A separate report for each State and the District of Columbia will present general statistics for the State and for the larger standard metropolitan statistical areas within the State by 2-digit and selected 3-digit industries, and for most individual counties on an "all manufacturing" basis.

Subject Series

Manufactures (2 reports). One report will provide data on the number of establishments, employment, and value added by manufacturing for each 4-digit industry according to employment size of the establishment in each industry. A separate report will provide statistics on inventories for each 4-digit industry on a national basis; State data on inventories will also be provided.

Mineral Industries (one report). This report will provide number of establishments, employment, and value added in mining for each 4-digit industry according to employment size of the establishment in each industry.

FINAL REPORTS

All preliminary reports will be superseded by comparable final reports. After separate final reports have been issued, they will be assembled and reissued in cloth bindings as follows:

Manufactures

Volume I, Summary Statistics

Volume II, Industry Statistics
Part 1, Major Groups 20-28
Part 2, Major Groups 29-39

Volume III, Area Statistics

Mineral Industries

Volume I, General Summary and Industry Statistics

Volume II, Area Statistics

1963 CENSUS OF MANUFACTURES IN PUERTO RICO

A separate 1963 Census of Manufactures was conducted jointly by the Puerto Rico Planning Board, Government of the Commonwealth of Puerto Rico, and the U.S. Bureau of the Census. A report of the findings will include statistics of manufacturing activity by industry and geographic area on value added by manufacture, employment, payrolls, inventories, capital expenditures, etc.

Additional Information and Order Forms

A more detailed description of the publication program of the 1963 censuses, including tentative publication dates, is available free of charge. Separate announcement and order forms for the preliminary reports of the censuses of manufactures and mineral industries are also available free of charge. Requests for order forms should specify which report series is desired. All requests should be addressed to the Publications Distribution Section, Bureau of the Census, Washington, D.C., 20233.

INDUSTRY SERIES

preliminary report

Finishing plants, n.e.c. SIC Code 2269

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Finishing Plants, N.E.C., shipped products valued at $218 million, an increase of 38 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 19 percent from 1958 to a total of 9.3 thousand employees in 1963. Value added by manufacture amounted to $74 million in 1963, an increase of 43 percent from 1958.

Finishing Plants, N.E.C., include establishments engaged primarily in dyeing and finishing textiles, not elsewhere classified, such as bleaching, dyeing, printing, and finishing of raw stock, yarn, braided goods, and narrow fabrics, except wool. These establishments perform finishing operations on purchased textiles or on a commission basis.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963.

Table 1.—GENERAL STATISTICS FOR FINISHING PLANTS, N.E.C., IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2269)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	143	84	9,287	39,771	7,996	15,722	28,767	74,376	145,452	217,931	4,793
1958[3]	155	79	7,808	28,814	6,818	13,729	22,496	52,005	105,719	158,033	2,117

[1] Includes expenditures for plants under construction but not in operation.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3] A revision in the definition for this industry was introduced in the 1957 Standard Industrial Classification so that data for prior years are not available.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958 and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958 and 1963, value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Finishing Plants, N.E.C., consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Finishing Plants, N.E.C., amounted to $218 million. Of this total, $10 million were products primary to other industries; and $51 million were receipts for miscellaneous activities including commission work. The industry shipments of primary products represent 94 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 95 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $208 million of finished textile products, n.e.c., were shipped by all producers of these products. Of this total, $147 million, or 71 percent, were shipped by plants classified in Industry 2269, Finishing Plants, N.E.C., while the remainder was shipped by plants classified in other industries. The 1958 ratio was 73.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR FINISHING PLANTS, N.E.C., BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2269)

1963 CENSUS OF MANUFACTURES

MC63(P)-220-1

INDUSTRY SERIES

preliminary report

Woven carpets and rugs SIC Code 2271

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Woven Carpets and Rugs Industry shipped products valued at $314 million, a decrease of 6 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 26 percent from 1958 and 7 percent from 1962 to a total of 13.4 thousand employees in 1963. Value added by manufacture amounted to $122 million in 1963, a decrease of 5 percent from 1958 and 6 percent from 1962.

The Woven Carpets and Rugs Industry includes establishments engaged primarily in the manufacture of carpets and rugs woven from any textile yarn.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that comparable data for prior years are not available.

March 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963, value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Woven Carpets and Rugs Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Woven Carpets and Rugs Industry amounted to $314 million. Of this total, $72 million were products primary to other industries; and $12 million were receipts for miscellaneous activities. The industry shipments of primary products represented 92 percent of the total manufactured products shipments, primary and secondary. The 1958 ratio was 97 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $251 million of woven carpets and rugs were shipped by all producers of these products. Of this total, $231 million, or 76 percent, were shipped by plants classified in Industry 2271, Woven Carpets and Rugs, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 87.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments producing woven carpets and rugs also report their shipments of products annually on Census Form MA-22Q, Rugs, Carpets, and Carpeting. The 1963 data as previously published for this survey are shown in table 3A together with the comparable totals reported in the Census of Manufactures.

In view of the differences between these figures, a review was undertaken of the data reported in each survey. Most of the difference is due to the omission of several plants from the annual survey. These plants are being added to the MA-22Q survey for 1964, and revised detailed data for 1963 will be included in the 1964 release for carpets and rugs. The remaining part of the discrepancy in the data is due to reporting differences for individual plants furnishing data in both surveys. These are being reviewed with the companies and any revisions will be made in the final 1963 Census of Manufactures report or in the Carpet and Rug Annual Report for 1964.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

INDUSTRY SERIES

Tufted carpets and rugs

SIC Code 2272

preliminary report

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Tufted Carpets and Rugs Industry shipped products valued at $798 million, an increase of 151 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 70 percent from 1958 and 12 percent from 1962 to a total of 19.6 thousand employees in 1963. Value added by manufacture amounted to $257 million in 1963, an increase of 136 percent from 1958 and 3 percent from 1962.

The Tufted Carpets and Rugs Industry includes establishments engaged primarily in the manufacture of tufted carpets and rugs from any textile fiber. Important products of this industry include tufted carpets, rugs, scatter rugs, and bathmats and bathmat sets, except terry woven. Finishers of these products are also included in this industry.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

(NA) Not available.
(X) Not applicable.
[1]Includes expenditures for plants under construction but not in operation.
[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumnes for further explanation of the sampling estimate.
[3]A revision in the definition for this industry was introduced in the 1957 Standard Industrial Classification so that data for prior years are not available.

and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963 value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added, which is shown in other reports, is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Tufted Carpets and Rugs Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Tufted Carpets and Rugs Industry amounted to $798 million. Of this total, $34 million were products primary to other industries; and $16 million were receipts for miscellaneous activities. The industry shipments of primary products represented 96 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 94 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $777 million of tufted carpets and rugs were shipped by all producers of these products. Of this total, $748 million, or 96 percent, were shipped by plants classified in Industry 2272, Tufted Carpets and Rugs, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 93.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will

be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-227D-3

INDUSTRY SERIES

preliminary report

Carpets and rugs, n. e. c. SIC Code 2279

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Carpets and Rugs, N.E.C., Industry shipped products valued at $28 million, a decrease of 48 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 39 percent from 1958 to a total of 2.4 thousand employees in 1963. Value added by manufacture amounted to $15 million in 1963, a decrease of 37 percent from 1958.

The Carpet and Rugs, N.E.C., Industry includes establishments engaged primarily in the manufacture of braided and hooked rugs, carpets, art squares, floor mattings, door mats and mattings from twisted paper, grasses, reeds, coir, sisal, jute or rags.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963.

Table 1.—GENERAL STATISTICS FOR THE CARPETS AND RUGS, N.E.C., INDUSTRY IN THE UNITED STATES: 1958 AND 1963

(SIC code 2279)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	97	34	2,432	8,535	2,128	4,034	6,581	14,581	13,703	28,370	316
1958[3]	121	53	3,989	12,561	3,520	6,835	10,068	23,176	30,671	54,533	666

[1]Includes expenditures for plants under construction but not in operation.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Comparable data prior to 1958 are not available because of extensive revisions in industry classification.

March 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958 and 1963, value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Carpet and Rugs, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Carpet and Rugs, N.E.C., Industry amounted to $28 million. Of this total, $2 million were products primary to other industries; and $3 million were receipts for miscellaneous activities. The industry shipments of primary products represented 90 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 78 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $49 million of knitted, braided, hooked, and other carpets and rugs, except woven or tufted, were shipped by all producers of these products. Of this total, $23 million, or 46 percent, were shipped by plants classified in Industry 2279, Carpets and Rugs, N.E.C., while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 78 percent. The differences in these ratios reflect the substantial changes that have occurred in the operations for a number of carpet companies.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments producing carpets and rugs also report their shipments of products annually on Census Form MA-22Q, Rugs, Carpets, and Carpeting. The 1963 data as previously published for this survey are shown in table 3 together with the comparable totals reported in the Census of Manufactures.

The Census of Manufactures data are higher than the comparable current survey figures. Most of these differences are due to the omission of a number of small plants from the annual survey. These plants are being added to the MA-22Q survey for 1964, and revised detailed data for 1963 will be included in the 1964 release for carpets and rugs.

There were also some reporting differences for individual plants furnishing data in both surveys. These are being reviewed with the companies and any revisions will be made in the final 1963 Census of Manufactures report or in the Carpet and Rug Annual Report for 1964.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing

industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-22E-1

INDUSTRY SERIES

preliminary report

Yarn mills, except wool SIC Code 2281

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Yarn Mills, Except Wool, shipped products valued at $1,052 million, an increase of 23 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 9 percent from 1958 and an increase of approximately 1 percent from 1962 to a total of 62 thousand employees in 1963. Value added by manufacture amounted to $356 million in 1963, an increase of 22 percent from 1958 and a decrease of 2 percent from 1962.

Yarn Mills, Except Wool, include establishments engaged primarily in spinning yarn wholly or chiefly by weight of cotton, man-made fiber staple, or silk staple. Establishments primarily engaged in dyeing or finishing purchased yarns or finishing yarns on a commission basis are classified in Industry 2269, Finishing Plants, N.E.C.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

(NA) Not available. (X) Not applicable. rRevised.

[1]Includes expenditures for plants under construction but not in operation.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that comparable data for prior years are not available.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Yarn Mills, Except Wool, consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Yarn Mills, Except Wool, amounted to $1,052 million. Of this total, $24 million were products primary to other industries; and $37 million were receipts for miscellaneous activities. The industry shipments of primary products represent 98 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 93 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $1,281 million of spun yarns, except wool, were shipped by all producers of these products. Of this total, $991 million, or 77 percent, were shipped by plants classified in Industry 2281, Yarn Mills, Except Wool, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 77.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of

Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE YARN MILLS, EXCEPT WOOL, INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2281)

Note: Production of spun yarns by knitting and narrow fabric weaving mills is excluded for both 1963 and 1958. Such production is included in the annual data published in Current Industrial Reports Series MA-22F, "Yarn Production." This report also includes detailed data by fiber, end use, and method of distribution.

The MA-22F data differ from the Census figures shown above because of the exclusion from the Census of Manufactures data of the output of knitting and narrow fabric mills, reporting differences for mills reporting in both surveys, some conceptual differences between the two surveys, and the omission of several plants from the annual yarn survey.

The summary figures for 1963 as published in the Current Industrial Report Series MA-22F are shown below for comparative purposes:

Code	Product	Production as reported on Census Annual Form MA-22F (1,000 pounds)			
		Total	For sale	For own use	On commission
22811	Carded cotton yarns	3,870,087	[1](a)	3,024,146	[1](b)
22812	Combed cotton yarns				
22813	Rayon and/or acetate	502,351	155,572	346,449	330
22814	Other spun man-made fiber yarns	444,855	181,607	254,514	8,734

[1]In order to avoid disclosure of individual company information, the approximate magnitude of the withheld information is as follows: (a) over 2,500 thousand pounds (b) 1,000 - 2,499 thousand pounds

(NA) Not available. (X) Not applicable.

[1]To the extent that finished yarns are made from purchased yarn (code 2269---), the industry and product class totals contain some duplication.

[2]The 1958 data for total production and total shipments include estimated data for yarns spun on the woolen and worsted systems. The 1958 data for transfers and produced and consumed are limited to yarns spun on the cotton system.

[3]Carded yarns bleached or mercerized from purchased yarns are included with the data for combed yarns.

[4]For 1963, spun noncellulosic yarns finished from purchased yarns are included with code 2269025.

[5]For 1958, all finished noncellulosic yarns are included with finished rayon and/or acetate yarns.

[6]Quantity estimated based on the quantity-value relationship reported for other yarns.

1963 CENSUS OF MANUFACTURES

MC63(P)-22E-2

INDUSTRY SERIES

preliminary report

Throwing and winding mills

SIC Code 2282

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Throwing and Winding Mills shipped products valued at $321 million, an increase of 84 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 15 percent from 1958 and 6 percent from 1962 to a total of 13.7 thousand employees in 1963. Value added by manufacture amounted to $93 million in 1963, an increase of 37 percent from 1958 and 5 percent from 1962.

Throwing and Winding Mills include establishments engaged in throwing, twisting, winding, or spooling yarn wholly or chiefly by weight of cotton, man-made fibers, or silk. Establishments primarily engaged in dyeing or finishing purchased yarns or finishing yarns on a commission basis are classified in Industry 2269, Finishing Plants, N.E.C.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

Table 1.--GENERAL STATISTICS FOR THROWING AND WINDING MILLS IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2282)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1958 through 1963 are not comparable with those for earlier years.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963, value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Throwing and Winding Mills consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Throwing and Winding Mills amounted to $321 million. Of this total, $15 million were products primary to other industries; and $19 million were receipts for miscellaneous activities. The industry shipments of primary products represent 95 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 95 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $331 million of throwing and winding mill products were shipped by all producers of these products. Of this total, $287 million, or 87 percent, were shipped by plants classified in Industry 2282, Throwing and Winding Mills, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 77.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.--GENERAL STATISTICS FOR THROWING AND WINDING MILLS BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2282)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)		($1,000)

(NA) Not available. (X) Not applicable.

[1]For both 1963 and 1958, data for textured yarn exclude production and shipments by establishments producing filament yarn and classified in Industries 2823, Cellulosic Man-Made Fibers, and 2824, Synthetic Organic Fibers, Noncellulosic. In 1963, these establishments reported production of approximately 80 million pounds of textured yarn in Census Annual Survey MA-22F, "Yarn Production." The production aggregate for this product as published in Current Industrial Reports Series, MA-22F, for 1963 is 162,468 thousand pounds. This report also furnishes more detailed data for this product.

[2]Production and quantity of shipments data estimated based on the quantity-value relationship reported for other products.

[3]For yarns thrown on commission, the figures represent commission receipts rather than the value of the yarns thrown. Commission throwsters generally reported their production and such figures are included in the total production column. However, production estimates are not included for commission throwsters that reported receipts of approximately $4 million and did not report production data.

U.S. DEPARTMENT OF COMMERCE

1963 CENSUS OF MANUFACTURES

MC63(P)-22E-3

INDUSTRY SERIES

preliminary report

Wool yarn mills SIC Code 2283

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Wool Yarn Mills shipped products valued at $419 million, an increase of 53 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 8 percent from 1958 to a total of 17.2 thousand employees in 1963. Value added by manufacture amounted to $116 million in 1963, an increase of 27 percent from 1958.

Wool Yarn Mills include establishments engaged primarily in spinning, twisting, winding or spooling yarn (including carpet and rug yarns) wholly or chiefly by weight of wool, mohair, or similar animal fibers. Establishments primarily engaged in dyeing or finishing purchased yarn or finishing yarn on a commission basis are classified in Industry 2231, Wool Weaving and Finishing Mills.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957

Table 1.—GENERAL STATISTICS FOR WOOL YARN MILLS IN THE UNITED STATES: 1963 AND 1958

(SIC code 2283)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	139	116	17,233	66,030	15,594	31,730	54,636	116,142	305,967	418,963	6,988
1958[3]	150	122	15,977	54,202	14,675	29,057	45,078	91,212	181,244	273,584	5,149

[1] Includes expenditures for plants under construction but not in operation.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3] A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1963 and 1958 are not comparable with those for earlier years.

edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958 and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Wool Yarn Mills consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Wool Yarn Mills amounted to $419 million. Of this total, $65 million were products primary to other industries; and $20 million were receipts for miscellaneous activities. The industry shipments of primary products represent 84 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 85 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $406 million of wool yarns were shipped by all producers of these products. Of this total, $334 million, or 82 percent, were shipped by plants classified in Industry 2283, Wool Yarn Mills, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 78.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments producing wool yarns also report their production annually on Census Form MA-22F, Yarn Production. The 1963 data as previously published for this survey are shown in footnote 1 of table 3A.

In view of the differences between these figures, a review was undertaken of the data reported in each survey. Most of the difference is due to the omission of several plants from the annual yarn survey. These plants have been added to the MA-22F survey for 1964, and revised detailed data for 1963 will be included in the 1964 release for yarn production. The remaining differences are the result of reporting variations for individual plants furnishing data in both surveys. These are being reviewed and may result in some revisions which will be included in the final census of manufactures report or in the 1964 Annual Yarn Production report.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in

tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

M63(P)-22E-1

INDUSTRY SERIES

preliminary report

Thread mills SIC Code 2284

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Thread Mills shipped products valued at $194 million, an increase of 9 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 13 percent from 1958. Value added by manufacture amounted to $75 million in 1963, an increase of 16 percent from 1958.

Thread Mills include establishments engaged primarily in the manufacture of thread from natural or man-made fiber except flax (Industry 2299) and wool (Industry 2283). Important products of this industry include sewing, crochet, darning, embroidery, tatting, hand knitting, and other handicraft threads.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963 but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE THREAD MILLS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2284)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	68	36	10,021	37,248	8,736	17,412	28,798	75,478	119,045	193,838	3,298
1958[r]	87	50	11,529	36,478	10,023	19,083	27,893	64,809	113,576	178,186	1,819

1947[3]	89	58	14,652	33,240	13,126	26,494	26,930	67,372	86,897	154,269	(NA)
1939[3]	87	(NA)	(NA)	(NA)	14,382	(NA)	11,458	27,122	29,164	56,286	(NA)

(NA) Not available. [r]Revised.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

March 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Thread Mills consist not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Thread Mills amounted to $194 million. Of this total, $13 million were products primary to other industries; and $7 million were receipts for miscellaneous activities. The industry shipments of primary products represented 93 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 90 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $194 million of thread were shipped by all producers of these products. Of this total, $174 million, or 90 percent, were shipped by plants classified in Industry 2284, Thread Mills, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 91.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which

show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE THREAD MILLS INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2284)

Geographic area	1963											1958[r]	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)		($1,000)
United States, total	68	36	10,021	37,248	8,736	17,412	28,798	75,478	119,045	193,838	3,298	11,529	64,809

1963 CENSUS OF MANUFACTURES

MC63(P)-22F-1

INDUSTRY SERIES

preliminary report

Felt goods, n. e. c. SIC Code 2291

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Felt Goods, N.E.C., Industry shipped products valued at $131 million, an increase of 37 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 6 percent from 1958 and 18 percent from 1962 to a total of 5 thousand employees in 1963. Value added by manufacture amounted to $56 million in 1963, an increase of 26 percent from 1958 and 15 percent from 1962.

The Felt Goods, N.E.C., Industry includes establishments engaged primarily in the manufacture of pressed felt, regardless of fiber, by means of heat, moisture, and pressure; and those making punched felt for rugs, cushions, and other products from hair, jute, wool, or other fibers by the needle loom process. Establishments primarily engaged in manufacturing woven wool felts and wool hair cloth are classified in Industry 2231, Wool Weaving and Finishing, and those manufacturing felt hats in Group 235, Hats, Caps, and Millinery.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report

Table 1.—GENERAL STATISTICS FOR THE FELT GOODS, N.E.C., INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2291)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)

1962[2].....	(NA)	(NA)	4,119	22,680	3,388	7,170	16,966	48,420	65,948	114,827	2,811	5
1961[2].....	(NA)	(NA)	4,120	21,047	3,387	7,110	15,648	45,487	56,719	101,274	1,819	5
1960[2].....	(NA)	(NA)	4,480	22,671	3,657	7,764	16,606	51,029	56,272	106,209	(2,884)	4
1959[2].....	(NA)	(NA)	5,048	24,526	4,186	8,906	18,085	52,629	60,889	114,024	(2,458)	3
1958.....	66	28	4,573	21,268	3,625	7,704	15,355	44,443	50,210	95,435	1,099	(X)
1954[3].....	72	33	5,987	23,376	5,182	10,767	18,083	42,610	59,502	101,703	1,623	(X)
1947[3].....	46	31	4,737	14,177	4,167	8,777	11,109	24,881	34,883	59,764	(NA)	(X)
1939[3].....	37	(NA)	3,770	4,870	3,346	(NA)	3,857	10,526	13,048	23,574	(NA)	(X)

Note: A review of the 1958 reports indicates that approximately 30 small establishments producing cotton batting or fabricated felt products from purchased felt were erroneously included in this industry. These establishments accounted for approximately 5 percent of the 1958 employment and 3 percent of the industry's value of shipments.

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See the annual survey of manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

June 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Felt Goods, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Felt Goods, N.E.C., Industry amounted to $131 million. Of this total, $23 million were products primary to other industries; and $10 million were receipts for miscellaneous activities. The industry shipments of primary products represent 81 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 89 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $119 million of felt goods, n.e.c., were shipped by all producers of these products. Of this total, $99 million or 83 percent, were shipped by plants classified in Industry 2291, Felt Goods, N.E.C., while the remainder was shipped by plants classified in other industries. The comparable ratio for 1958 was 86.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments producing felt goods, except woven felts and hats, also report their production quarterly on Census Form M22T, Broad Fabrics (Except Knit), Woven, Nonwoven, and Felts. The 1963 data as previously published for this survey are shown in table 3 together with the comparable totals reported in the census of manufacturers.

In view of the differences between these figures, a detailed review was undertaken of the data reported in each survey. Most of the difference is due to misclassification of products by companies reporting in the current survey. In addition, several plants producing felts were not included in the M22T survey. There were also some reporting differences for plants furnishing data in both surveys. The plants omitted from the M22T survey have been added to this survey for 1965, and revised data for 1964 will be included in the first quarter 1965 release for felts, except woven felts, and hats.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-22F-7

INDUSTRY SERIES

preliminary report

Lace goods SIC Code 2292

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Lace Goods Industry shipped products valued at $54 million, a decrease of 15 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 24 percent from 1958 to a total of 5.1 thousand employees in 1963. Value added by manufacture amounted to $33 million in 1963, a decrease of 4 percent from 1958.

The Lace Goods Industry includes establishments engaged primarily in the manufacture of lace machine products and in the dyeing and finishing of lace products.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE LACE GOODS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2292)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	149	50	5,096	20,311	4,436	8,361	16,367	33,047	22,269	53,906	664
1958	208	66	6,689	25,764	5,776	10,406	19,452	34,247	26,658	63,282	1,194
1954[3]	138	62	7,442	26,117	6,568	12,521	20,492	37,571	23,775	61,767	1,941

1939[3]	63	(NA)	8,341	10,792	7,254	(NA)	8,107	15,353	8,785	24,138	(NA)

(NA) Not available.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

March 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958 and 1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Lace Goods Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Lace Goods Industry amounted to $54 million. Of this total, $8 million were receipts for miscellaneous activities. The industry shipments of primary products represented 99 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 98 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $49 million of lace goods were shipped by all producers of these products. Of this total, $46 million, or 94 percent, were shipped by plants classified in Industry 2292, Lace Goods, while the remainder was shipped by plants classified in other industries. The 1958 percentage was 95.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the

United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-22F-3

INDUSTRY SERIES

preliminary report

Padding and upholstery filling

SIC Code 2293

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Padding and Upholstery Filling Industry shipped products valued at $155 million, an increase of 11 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 3 percent from 1958 to a total of 6.9 thousand employees in 1963. Value added by manufacture amounted to $64 million in 1963, an increase of 12 percent from 1958.

The Padding and Upholstery Filling Industry includes establishments engaged primarily in the manufacture of batting, padding, wadding, and filling for upholstery, pillows, quilts, and apparel from curled hair, cotton mill waste, moss, hemp tow, flax tow, kapok, and related materials.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

and Hawaii are included for 1958 and 1963 but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Padding and Upholstery Filling Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Padding and Upholstery Filling Industry amounted to $155 million. Of this total, $22 million were products primary to other industries; and $12 million were receipts for miscellaneous activities. The industry shipments of primary products represent 84 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $139 million of padding and upholstery filling were shipped by all producers of these products. Of this total, $120 million, or 86 percent, were shipped by plants classified in Industry 2293, Padding and Upholstery Filling, while the remainder was shipped by plants classified in other industries. The comparable ratio for 1958 was 88.

GENERAL STATISTICS

The general statistics (employment, payrolls cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued.

Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Processed textile waste SIC Code 2294

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Processed Textile Waste Industry shipped products valued at $72 million, a decrease of 23 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 13 percent from 1958 to a total of 4.0 thousand employees in 1963. Value added by manufacture amounted to $29 million in 1963, a decrease of 7 percent from 1958.

The Processed Textile Waste Industry includes establishments engaged primarily in processing textile mill waste for spinning, padding, batting, or other uses; in recovering textile fibers from clippings and rags; in cutting flock from waste, recovered fibers, or new fiber stock; and in manufacturing oakum and twisted jute packing. Establishments primarily engaged in cleaning and sorting wiping rags or waste are classified in nonmanufacturing industries.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report

Table 1.—GENERAL STATISTICS FOR THE PROCESSED TEXTILE WASTE INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2294)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new [2]
	Total [1]	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963 [3]	134	56	4,015	16,902	3,360	7,063	11,970	28,844	43,417	72,107	1,144

(NA) Not available.

[1] A review of the reports submitted for 1958 indicated that a number of small establishments were misclassified as to industry and included in this industry. This would not significantly affect the statistics other than the number of establishments.

[2] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4] Data for Alaska and Hawaii are not included.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963 but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Textile Waste Processors consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Textile Waste Processors amounted to $72 million. Of this total, $5 million were products primary to other industries; and $11 million were receipts for miscellaneous activities. The industry shipments of primary products represent 92 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 96 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $60 million of processed textile waste products were shipped by all producers of these products. Of this total, $56 million, or 93 percent, were shipped by plants classified in Industry 2294, Processed Textile Waste, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was also 93 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued.

Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-22F-5

INDUSTRY SERIES

preliminary report

Coated fabric, not rubberized

SIC Code 2295

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Coated Fabric, Not Rubberized, Industry shipped products valued at $419 million, an increase of 70 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 30 percent from 1958 and 5 percent from 1962 to a total of 13.2 thousand employees in 1963. Value added by manufacture amounted to $174 million in 1963, an increase of 73 percent from 1958 and 10 percent from 1962.

The Coated Fabric, Not Rubberized, Industry includes establishments engaged primarily in the manufacture of coated and impregnated textiles, and in the special finishing of textiles such as varnishing and waxing. Establishments primarily engaged in rubberizing purchased fabrics are classified in Industry 3069, Rubber Products, N.E.C., and those primarily engaged in dyeing and finishing textiles, in Group 226, Dyeing and Finishing Textiles, Except Wool Fabrics and Knit Goods.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification

Table 1.—GENERAL STATISTICS FOR THE COATED FABRIC, NOT RUBBERIZED, INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

(SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Coated Fabric, Not Rubberized, Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Coated Fabric, Not Rubberized, Industry amounted to $419 million. Of this total, $62 million were products primary to other industries; and $13 million were receipts for miscellaneous activities. The industry shipments of primary products represented 85 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 82 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $413 million of coated fabric, not rubberized, were shipped by all producers of these products. Of this total, $345 million, or 83 percent, were shipped by plants classified in Industry 2295, Coated Fabric, Not Rubberized, while the remainder was shipped by plants classified in other industries. The comparable ratio for 1958 was 80.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued.

Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE COATED FABRIC, NOT RUBBERIZED, INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2295)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Tire cord and fabric

SIC Code 2296

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Tire Cord and Fabric Industry shipped products valued at $376 million, approximately the same as 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 25 percent from 1958 to a total of 9 thousand employees in 1963. Value added by manufacture amounted to $72 million in 1963, an increase of 3 percent from 1958 and a decrease of 2 percent from 1962.

The Tire Cord and Fabric Industry includes establishments engaged primarily in the manufacture of tire cord and fabric for use in reinforcing rubber tires, industrial belting, fuel cells, and similar uses.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

Table 1.—GENERAL STATISTICS FOR THE TIRE CORD AND FABRIC INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2296)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)	
1963	20	19	9,163	35,140	8,347	16,388	30,041	72,251	303,588	375,689	3,043	(X)

1958[3]	23	23	12,214	36,063	11,322	20,960	32,233	69,844	300,829	375,790	6,029	(X)

(NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] A revision in the definition for this industry was introduced in the 1957 Standard Industrial Classification so that data for prior years are not available.

February 1965

BUREAU OF THE CENSUS, Richard M. Scammon, Director

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963, value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Tire Cord and Fabric Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Tire Cord and Fabric Industry amounted to $376 million. Of this total, $46 million were products primary to other industries; and $10 million were receipts for miscellaneous activities. The industry shipments of primary products represented 87 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 85 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $349 million of tire cord and tire fabric were shipped by all producers of these products. Of this total, $319 million, or 91 percent, were shipped by plants classified in Industry 2296, Tire Cord and Fabric, while the remainder was shipped by plants classified in other industries. The comparable ratio for 1958 was 94.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

INDUSTRY SERIES

preliminary report

Scouring and combing plants

SIC Code 2297

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Scouring and Combing Plants shipped products valued at $115 million, an increase of 31 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 5 percent from 1958 to a total of 5.8 thousand employees in 1963. Value added by manufacture amounted to $43 million in 1963, an increase of 18 percent from 1958.

Scouring and Combing Plants include establishments engaged primarily in processing textile fibers to prepare them for spinning. Important processes included in this industry are wool scouring and carbonizing, and combing and converting top.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

1939[3] [4]	49	(NA)	(NA)	(NA)	6,731	(NA)	6,696	13,015	21,682	34,697	(NA)

(NA) Not available.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

[4] Data for 1939 include information for "Topmakers" who do not perform any manufacturing operations but sell scoured wool or tops and noils which have been produced for their account by others on a contract or commission basis. The figures for 1947-1963 exclude such topmakers and are thus not completely comparable with earlier information.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as the Scouring and Combing Plants consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Scouring and Combing Plants amounted to $115 million. Of this total, $4 million were products primary to other industries; and $39 million were receipts for miscellaneous activities primarily commission scouring and combing wool owned by others. The industry shipments of primary products represented 95 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $108 million of scouring and combing mill products were shipped by all producers of these products. Of this total, $72 million, or 68 percent, were shipped by plants classified in industry 2297, Scouring and Combing Plants, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 59 percent.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments producing tops and noils also report their production monthly on Census Form M22D, Consumption of Fibers in Woolen Spinning and Production of Top, Noils and Sales Yarn. The 1963 data as previously published for this survey are shown in table 3B while the comparable totals reported in the Census of Manufactures are shown in table 3A.

The differences between the totals shown in these tables are generally due to reporting variations for individual plants furnishing data in both surveys. However, the difference shown for top other than wool resulted from the omission of several plants from the monthly survey. These plants are being added to the monthly survey, and revised data will be included in the 1964 Current Industrial Reports Series M22D.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3C. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were

used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.--GENERAL STATISTICS FOR SCOURING AND COMBING PLANTS, BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2297)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)		($1,000)
United States, total	67	37	5,780	24,729	5,153	10,596	19,797	42,541	73,650	115,149	3,337	6,075	36,073
New England	31	19	3,185	14,329	2,889	5,863	11,623	25,287	26,444	50,511	1,633	3,686	22,085
Massachusetts	18	11	2,304	10,569	2,082	4,331	8,467	18,965	24,780	42,491	989	2,523	17,528
Middle Atlantic	15	9	1,106	5,273	930	1,881	3,864	8,854	36,611	45,830	(1)	1,216	7,915
Pennsylvania	10	7	665	3,547	526	1,076	2,451	5,868	26,490	31,979	(1)	1,128	7,738
All other divisions	21	9	1,489	5,127	1,334	2,852	4,310	8,400	10,595	18,808	(D)	1,173	6,073

Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in this or associated industries or areas, or (b) because the industry was of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on this industry.)

(D) Withheld to avoid disclosing figures for individual companies.

[1]Less than $500 thousand.

Table 3A.--QUANTITY AND VALUE OF SCOURING AND COMBING MILL PRODUCTS SHIPPED BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Includes quantity and value of these products reported not only by establishments classified as Scouring and Combing Plants but also by establishments making these items as "secondary" products in other industries. See text under "Value of Shipments")

PUBLICATION PROGRAM 1963 CENSUSES OF MANUFACTURES AND MINERAL INDUSTRIES

Results of the 1963 Censuses of Manufactures and Mineral Industries will be issued initially in preliminary reports which will furnish summary data. These reports will be superseded by more detailed final reports. An outline of the publication program is shown below.

PRELIMINARY REPORTS

Summary Series

Manufactures (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. General statistics will also be presented for industries grouped according to market categories—durable and nondurable goods industries. A second report will provide general statistics without industry detail for regions, States, and large standard metropolitan statistical areas.

Mineral Industries (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. A second report will provide general statistics by 2-digit industry group for regions and States.

Industry Series

Manufactures (about 370 reports). Separate reports for virtually all of the 430 manufacturing industries will give industry totals for general statistics for the United States and for regions and States. A product table in each report will give the quantity and value of shipments of the products classified in the industry for the United States.

Mineral Industries (about 45 reports). Separate reports for industries or for groups of industries for all of the 50 mineral industries will present general statistics for the United States and for regions and States. A product table will give the quantity and value of shipments of the products classified in the industry for the United States and for regions and States.

Area Series

Manufactures (51 reports). A separate report for each State and the District of Columbia will present general statistics for the State and for the larger standard metropolitan statistical areas within the State by 2-digit and selected 3-digit industries, and for most individual counties on an "all manufacturing" basis.

Subject Series

Manufactures (2 reports). One report will provide data on the number of establishments, employment, and value added by manufacturing for each 4-digit industry according to employment size of the establishment in each industry. A separate report will provide statistics on inventories for each 4-digit industry on a national basis; State data on inventories will also be provided.

Mineral Industries (one report). This report will provide number of establishments, employment, and value added in mining for each 4-digit industry according to employment size of the establishment in each industry.

FINAL REPORTS

All preliminary reports will be superseded by comparable final reports. After separate final reports have been issued, they will be assembled and reissued in cloth bindings as follows:

Manufactures

Volume I, Summary Statistics

Volume II, Industry Statistics
Part 1, Major Groups 20-28
Part 2, Major Groups 29-39

Volume III, Area Statistics

Mineral Industries

Volume I, General Summary and Industry Statistics

Volume II, Area Statistics

1963 CENSUS OF MANUFACTURES IN PUERTO RICO

A separate 1963 Census of Manufactures was conducted jointly by the Puerto Rico Planning Board, Government of the Commonwealth of Puerto Rico, and the U.S. Bureau of the Census. A report of the findings will include statistics of manufacturing activity by industry and geographic area on value added by manufacture, employment, payrolls, inventories, capital expenditures, etc.

Additional Information and Order Forms

A more detailed description of the publication program of the 1963 censuses, including tentative publication dates, is available free of charge. Separate announcement and order forms for the preliminary reports of the censuses of manufactures and mineral industries are also available free of charge. Requests for order forms should specify which report series is desired. All requests should be addressed to the Publications Distribution Section, Bureau of the Census, Washington, D.C., 20233.

Current Business Reports

Listed below are selected Bureau of the Census publications which are based on data collected in various recurring current surveys of the Bureau. While generally they are limited to businesses within the scope of the Business Census, there are some exceptions, particularly County Business Patterns.

County Business Patterns (CBP)

Data on mid-March employment and January-March payrolls taxable under the Federal Insurance Contributions Act are published in these reports for the United States, States, counties, and standard metropolitan statistical areas. These statistics are shown for many kinds of business under the following broad industry groups: Agricultural services, forestry, fisheries; mining; contract construction; manufacturing; public utilities; wholesale trade; retail trade; finance, insurance, and real estate; and services. Beginning with 1964 data, CBP reports are to be issued annually with the report for the first quarter 1964 scheduled for release about mid-1965. Previously published data are available for the first quarter of 1962 and selected prior years. These reports are published in 15 parts (individually priced)—1 or more for each of the 9 geographic divisions and a United States Summary. (They may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.)

Retail Trade Reports

(All reports in this series sold as a single subscription for $6.00 per year ($4.00 additional for foreign mailing) by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.)

(a) Weekly Retail Sales.—Issued each Thursday, this report presents estimated weekly sales of retail stores in the United States, by kind-of-business groups and for all kinds of business combined, for weeks of the current month to date and all weeks of the previous month. Percentage changes in sales in the most recent week, the most recent 4-week period, and comparable periods a year ago are also shown. (Single copies available at 10 cents from the Bureau of the Census.)

(b) Advance Monthly Retail Sales.—Issued about 10 days after the close of the data month, this report presents monthly estimates of sales of retail stores by kind-of-business groups and for all kinds of business combined. Data are shown for current month, preceding month, and same month a year ago, both unadjusted and adjusted for seasonal variations and trading-day differences. (Single copies available at 10 cents from the Bureau of the Census.)

(c) Monthly Retail Trade.—This report includes estimated dollar sales and end-of-month accounts receivable, by kind of business, for all retail stores and for stores of organizations operating 11 or more retail stores, for the United States for the current month, with comparisons for previous months. Data are shown both unadjusted and adjusted for seasonal variation and trading-day differences. (Single copies available at 10 cents from the U.S. Government Printing Office.)

(d) Monthly Retail Trade—Area Sales Supplement.—This supplement to the Monthly Retail Trade Report provides estimates of sales of retail stores by geographic regions, divisions, and selected States, and standard metropolitan statistical areas, for the current month, with comparisons for previous months. (Single copies available at 10 cents from the Bureau of the Census.)

(e) Retail Trade—Annual Report.—This report provides annual retail sales by kind of business and per capita sales of selected kinds of business, for the United States, geographic regions, divisions, and selected States. United States figures by kind of business are given on the cost value of year-end merchandise inventories, sales-inventory ratios, and year-end accounts receivable balances, by charge and installment accounts. Separate figures also are provided for retail stores and organizations operating 11 or more retail stores and, for the food and general merchandise groups, for organizations operating 4 or more retail stores. (Single copies are available at 20 cents from the Bureau of the Census.)

Monthly Wholesale Trade Report

This report includes estimated dollar sales, end-of-month inventories, and stock-sales ratios of merchant wholesalers, by kind of business for the current month, with comparisons for previous months. Dollar volume sales estimates are shown by geographic division in total and for durable and nondurable kind-of-business subtotals. Sales and inventory trends (percent changes) are shown by detailed kinds of business at the national level and for selected categories by geographic division. Measures of sampling variability are given. United States data are shown unadjusted for seasonal variations and, in the case of sales, also for trading-day differences. (This report is sold for $1.50 per year (50 cents additional for foreign mailing) by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Single copies available at 15 cents from the U.S. Government Printing Office.)

Other Current Business Reports

Canned Food Report.— This report is issued as of five dates—January 1, April 1, June 1, July 1, and November 1—to show total stocks of wholesale distributors and canners, including warehouses of retail multiunit organizations, of selected canned food items (vegetables, fruits, juices, fish). In all reports, data are shown in actual cases for total stocks and for canners' carry-over, pack, and total supply. In the January 1 report separate data are shown for the No. 10 can size, as well as for warehouse stocks of retail multiunit organizations. Data on canners are furnished by the canners' association. (This series of reports, sold at $1.00 for one season's (5) reports or 25 cents for a single copy, may be obtained from the Bureau of the Census.)

Green Coffee Inventories and Roastings.—This quarterly report provides estimates of green coffee inventories held by roasters, importers, and dealers, the quantity of green coffee roasted, and the amount roasted for soluble use, by quarters, for the current and previous three years. Also included are quarterly imports of green coffee during the same period. (These data issued as a press release, available without charge from the Bureau of the Census.)

Reports ordered from the Bureau of the Census should be addressed as follows:

1963 CENSUS OF MANUFACTURES

MC63(P)-22F-8

INDUSTRY SERIES

preliminary report

Cordage and twine

SIC Code 2298

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Cordage and Twine Industry shipped products valued at $145 million, an increase of 2 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 9 percent from 1958 and 1 percent from 1962 to a total of 8.8 thousand employees in 1963. Value added by manufacture amounted to $56 million in 1963, a decrease of 14 percent from 1958 and 11 percent from 1962.

The Cordage and Twine Industry includes establishments engaged primarily in the manufacture of rope, cable, cordage, twine, and related products from abaca (manila), sisal henequen, hemp, cotton, paper, jute, man-made fibers, and other fibers.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE CORDAGE AND TWINE INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2298)

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

March 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Cordage and Twine Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Cordage and Twine Industry amounted to $145 million. Of this total, $13 million were products primary to other industries; and $9 million were receipts for miscellaneous activities. The industry shipments of primary products represented 91 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $141 million of cordage and twine were shipped by all producers of these products. Of this total, $123 million, or 87 percent, were shipped by plants classified in Industry 2298, Cordage and Twine, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 93.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which

show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Textile goods, n.e.c. SIC Code 2299

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Textile Goods, N.E.C., Industry shipped products valued at $169 million, an increase of 25 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 9 percent from 1958 and an increase of 2 percent from 1962 to a total of 7 thousand employees in 1963. Value added by manufacture amounted to $78 million in 1963, an increase of 29 percent from 1958 and 21 percent from 1962.

The Textile Goods, N.E.C., Industry includes establishments engaged primarily in the manufacture of bonded fiber fabrics except felt, nonwoven ribbons, linen goods, and jute goods except felt, and other textile goods, n.e.c.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

Table 1.—GENERAL STATISTICS FOR THE TEXTILE GOODS, N.E.C., INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2299)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)	
1963.....	122	54	7,176	34,561	5,728	11,470	22,617	78,258	91,234	168,926	5,274	(X)

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the annual survey of manufactures volumes for further discussion of the sampling estimate.

[3]A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1958 through 1963 are not comparable with those for earlier years.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS,

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963, value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Textile Goods, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Textile Goods, N.E.C., Industry amounted to $169 million. Of this total, $27 million were products primary to other industries; and $13 million were receipts for miscellaneous activities. The industry shipments of primary products represent 83 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 84 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $165 million of textile goods, n.e.c., were shipped by all producers of these products. Of this total, $129 million, or 78 percent, were shipped by plants classified in Industry 2299, Textile Goods, N.E.C., while the remainder was shipped by plants classified in other industries. The comparable ratio for 1958 was 86.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments producing bonded fiber fabrics also report their production annually on Census Form MA-22T, Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts. The 1963 data as previously published for this survey are shown in table 3 together with the comparable totals reported in the census of manufactures.

In view of the differences between these figures, a review was undertaken of the data reported in each survey. The discrepancy is the result of the omission of some plants from the annual commodity survey. These plants are being added to the MA-22T survey for 1964 and revised detailed data for 1963 will be included in the 1964 report for nonwoven fabrics.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE TEXTILE GOODS, N.E.C., INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2299)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture ($1,000)	Cost of materials ($1,000)	Value of shipments ($1,000)	Capital expenditures, new ($1,000)	All employees, number	Value added by manufacture ($1,000)
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)						
United States, total	122	54	7,176	34,561	5,728	11,470	22,617	78,258	91,234	168,926	5,274	7,862	60,841

n.e.c. Not elsewhere classified. (NA) Not available. (X) Not applicable.

[1]The products of this industry only include textile goods not classified in other industries. Separate reports are being issued for the other textile industries such as weaving mills, knitting mills, finishing plants, carpet mills, yarn mills, etc.

[2]Includes some duplication since some nonwoven ribbons are made from purchased nonwoven fabrics.

[3]The 1958 data for nonwoven fabrics are included with product code 2299000. This combination was made because the data were unsatisfactorily reported due to problems associated with the product definitions.

[4]Differences between the data collected in the census of manufactures and in the Current Annual Survey MA-22T, "Broad Fabrics (Except Knit): Woven, Nonwoven, and Felts," are discussed in the text.

[5]Separate data were not collected prior to 1963.

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Men's and boys' suits and coats

SIC Code 2311

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Men's and Boys' Suits and Coats Industry shipped products valued at $1,510 million, an increase of 17 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed no change since 1958 and amounted to 122 thousand employees in 1963. Value added by manufacture amounted to $822 million in 1963, an increase of 28 percent from 1958.

The Men's and Boys' Suits and Coats Industry includes establishments engaged primarily in the manufacture of men's, youths', and boys' suits, coats, and overcoats. Establishments primarily engaged in manufacturing uniforms are also included in this industry. Establishments primarily engaged in manufacturing men's work garments are classified in Industry 2328, Work Clothing.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE MEN'S AND BOYS' SUITS AND COATS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2311)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	1,105	682	122,059	491,804	108,470	197,433	395,633	822,367	709,966	1,509,893	6,890
1958	1,365	763	122,205	407,986	107,215	184,782	321,525	642,510	651,039	1,295,362	4,906
1954[4]	1,310	687	119,001	374,795	106,720	187,579	301,062	527,234	630,794	1,172,979	3,466
1947[4]	1,814	(NA)	147,099	397,151	133,181	259,677	332,007	660,206	752,576	1,412,782	10,747
1939[4]	1,848	(NA)	(NA)	(NA)	116,852	(NA)	123,326	236,511	309,400	545,911	(NA)

(NA) Not available.

[1] See text regarding comparability of 1963 data with earlier years.

[2] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4] Data for Alaska and Hawaii are not included.

June 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3A or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in a decrease of 12 million dollars, or approximately 1.9 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Men's and Boys' Suits and Coats Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Men's and Boys' Suits and Coats Industry amounted to $1,510 million. Of this total, $74 million were products primary to other industries; and $299 million were receipts for miscellaneous activities, primarily for contract work done for others. The industry shipments of primary products represent 94 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 93 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $1,184 million of men's and boys' suits and coats were shipped by all producers of these products. Of this total, $1,137 million, or 96 percent were shipped by plants classified in Industry 2311, Men's and Boys' Suits and Coats, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 97.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments shipping men's and boys' suits and coats also report annually on Census Form MA-23A, Annual Apparel Survey. The 1963 data compiled from this survey are shown in table 3A, together with the comparable totals reported in the census of manufactures. The more detailed cuttings data for 1958 and 1963 as reported on Census Annual Form MA-23A are shown in table 3B.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in

tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

	As reported in the census of manufactures	443	9,209	310	7,615
	As report on Census Annual Form MA-23A	[5]	[2]	[3]	(NA)
23113 75	Men's and boys' separate tailored uniform coats and jackets:				
	As reported in the census of manufactures	686	16,764	1,244	14,254
	As reported on Census Annual Form MA-23A	[5]	[2]	[3]	(NA)
23110 00	Men's and boys' suits, coats, and overcoats, not specified by kind	(X)	26,143	(X)	18,060
23119 11	Receipts for contract work on men's and boys' suits, tailored sport and dress coats, overcoats, and jackets done for others on their materials	(X)	[6]251,185	(X)	[6]216,196

Note: Quantity data collected on Census Annual Form MA-23A represent cuttings rather than shipments. Differences between the data collected in the census of manufactures and the Current Annual Apparel Survey, MA-23A, are discussed in the text. More detailed cuttings data are shown in table 3B.

(NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text).

[2]For 1963, value of shipments data were not collected separately in the annual apparel survey for men's and boys' uniform garments but were included with the value of shipments for each related nonuniform category. For both 1963 and 1958, the quantity data for boys' tailored uniform clothing are included with men's tailored uniform clothing. For 1958, these quantity data exclude the production of uniform clothing made on contract by private companies from materials owned by the United States Government.

[3]Current survey data for 1958 were revised based on the 1958 Census of Manufactures.

[4]For 1963, separate value of shipments data were not collected for boys' suits, topcoats, and dress and sport coats, except uniform, on Census Annual Form MA-23A. The total value of shipments reported on Annual Form MA-23A for 1963 was $94,409 thousand.

[5]For 1963, separate quantity data were not collected for men's and boys' uniform overcoats and topcoats and uniform coats and jackets on Census Annual Form MA-23A. The combined quantity reported was 1,128 thousand units.

[6]Contract receipts are not included in the total shown for men's and boys' suits, coats, and overcoats. For 1963, contract receipts include all receipts for work on men's and boys' suits, tailored sport and dress coats, overcoats, and jackets done for others on their materials regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2311, Men's and Boys' Suits and Coats.

Table 3B.—QUANTITY OF MEN'S AND BOYS' SUITS AND COATS CUT BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(As reported annually on Census Form MA-23A, Apparel)

Product code	Product	Total cuttings (1,000 units)	
		1963	1958

23111 55	Made from wool blends	1,562	(2)
23111 56	Made from other fabrics	165	(2)
	Priced from $50.00 and over per unit, total	581	(2)
23111 57	Made from all wool	279	(2)
23111 58	Made from wool blends	210	(2)
23111 59	Made from other fabrics	92	(2)
	Men's and boys' uniform suits, total	336	(3)
23111 61	Made under State and Federal Government contracts	21	(3)
23111 62	All other tailored uniform suits	315	(3)
	Men's overcoats, topcoats, and tailored car and suburban coats, except uniform, total	4,279	4,870
23112 11	Overcoats (outer fabric over 22 oz. per yard)	391	391
	Topcoats, including reversibles, zipper-lined, and weather-repellent wool topcoats (22 oz. or less per yard), total	[4]2,420	3,123
23112 16	50 percent or more wool	2,115	2,832
23112 17	50 percent or more man-made fibers	165	140
23112 18	All other fabrics	140	151
23112 19	Suburban and car coats (tailored)	1,468	1,327
23112 30	Stormcoats	(4)	29
	Men's and boys' uniform overcoats, topcoats, and jackets, total	1,128	(3)
23115 13	Made under State and Federal Government contracts	799	(3)
23115 14	All other tailored uniform coats	329	(3)
	Men's tailored separate dress and sport coats, including sport and leisure jackets, and excluding uniform coats, total	11,175	8,470
23113 15	All wool	4,749	6,513
23113 16	Wool blends	2,845	1,585
23113 17	All other fabrics	3,581	372
	Boys' suits (including students', cadets', and junior boys') except wash suits and uniform suits, total	6,103	3,532
23114 11	50 percent or more wool	2,589	1,735
23114 12	50 percent or more man-made fibers	2,365	1,052
23114 13	All other fabrics	1,149	745
23114 14	Boys' overcoats, topcoats, stormcoats, and tailored suburban and car coats	1,068	1,363
	Boys' tailored dress and sport coats, including sport and leisure jackets, total	3,505	3,119
23114 15	50 percent or more wool	2,302	2,254
23114 16	50 percent or more man-made fibers	845	440
23114 17	All other fabrics	358	425

[1]Cuttings as reported for 1963 and 1958 by product code on Census Annual Form MA-23A.

[2]Data for men's suits were collected by price line beginning in 1959. The fabric and weight classifications were revised from those used previously beginning in 1962. Therefore, there are no comparable 1958 data by price line, fabric, and weight classifications.

[3]For 1958, data for men's and boys' uniform suits, overcoats, and topcoats were not collected on Census Annual Form MA-23A.

[4]Excludes data for stormcoats which are withheld to avoid disclosing figures for individual companies.

PUBLICATION PROGRAM 1963 CENSUSES OF MANUFACTURES AND MINERAL INDUSTRIES

Results of the 1963 Censuses of Manufactures and Mineral Industries will be issued initially in preliminary reports which will furnish summary data. These reports will be superseded by more detailed final reports. An outline of the publication program is shown below.

PRELIMINARY REPORTS

Summary Series

Manufactures (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. General statistics will also be presented for industries grouped according to market categories—durable and nondurable goods industries. A second report will provide general statistics without industry detail for regions, States, and large standard metropolitan statistical areas.

Mineral Industries (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. A second report will provide general statistics by 2-digit industry group for regions and States.

Industry Series

Manufactures (about 370 reports). Separate reports for virtually all of the 430 manufacturing industries will give industry totals for general statistics for the United States and for regions and States. A product table in each report will give the quantity and value of shipments of the products classified in the industry for the United States.

Mineral Industries (about 45 reports). Separate reports for industries or for groups of industries for all of the 50 mineral industries will present general statistics for the United States and for regions and States. A product table will give the quantity and value of shipments of the products classified in the industry for the United States and for regions and States.

Area Series

Manufactures (51 reports). A separate report for each State and the District of Columbia will present general statistics for the State and for the larger standard metropolitan statistical areas within the State by 2-digit and selected 3-digit industries, and for most individual counties on an "all manufacturing" basis.

Subject Series

Manufactures (2 reports). One report will provide data on the number of establishments, employment, and value added by manufacturing for each 4-digit industry according to employment size of the establishment in each industry. A separate report will provide statistics on inventories for each 4-digit industry on a national basis; State data on inventories will also be provided.

Mineral Industries (one report). This report will provide number of establishments, employment, and value added in mining for each 4-digit industry according to employment size of the establishment in each industry.

FINAL REPORTS

All preliminary reports will be superseded by comparable final reports. After separate final reports have been issued, they will be assembled and reissued in cloth bindings as follows:

Manufactures

Volume I, Summary Statistics

Volume II, Industry Statistics
Part 1, Major Groups 20-28
Part 2, Major Groups 29-39

Volume III, Area Statistics

Mineral Industries

Volume I, General Summary and Industry Statistics

Volume II, Area Statistics

1963 CENSUS OF MANUFACTURES IN PUERTO RICO

A separate 1963 Census of Manufactures was conducted jointly by the Puerto Rico Planning Board, Government of the Commonwealth of Puerto Rico, and the U.S. Bureau of the Census. A report of the findings will include statistics of manufacturing activity by industry and geographic area on value added by manufacture, employment, payrolls, inventories, capital expenditures, etc.

Additional Information and Order Forms

A more detailed description of the publication program of the 1963 censuses, including tentative publication dates, is available free of charge. Separate announcement and order forms for the preliminary reports of the censuses of manufactures and mineral industries are also available free of charge. Requests for order forms should specify which report series is desired. All requests should be addressed to the Publications Distribution Section, Bureau of the Census, Washington, D.C., 20233.

1963 CENSUS OF MANUFACTURES

MC63(P)-23A-2

INDUSTRY SERIES

preliminary report

Men's dress shirts and nightwear

SIC Code 2321

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Men's Dress Shirts and Nightwear Industry shipped products valued at $1,313 million, an increase of 35 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 9 percent from 1958 to a total of 113 thousand employees in 1963. Value added by manufacture amounted to $605 million in 1963, an increase of 43 percent from 1958.

The Men's Dress Shirts and Nightwear Industry includes establishments engaged primarily in the manufacture of men's, youths', and boys' shirts, including polo and sport shirts, collars, and nightwear cut and sewed from purchased woven or knit fabric. Establishments primarily engaged in manufacturing work shirts are classified in Industry 2328, Work Clothing. Knitting mills primarily engaged in manufacturing nightwear are classified in Industry 2254, Knit Underwear Mills, while knitting mills primarily engaged in manufacturing knit shirts are classified in Industry 2253, Knit Outerwear Mills.

This report does not include figures for administrative offices, warehouses, garages, or

Table 1.—GENERAL STATISTICS FOR THE MEN'S DRESS SHIRTS AND NIGHTWEAR INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2321)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture [1]	Cost of materials	Value of shipments [1]	Capital expenditures, new [2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	839	568	113,007	330,438	105,218	193,997	273,539	605,374	725,022	1,312,692	8,867
1958	880	606	103,948	254,873	94,919	169,536	210,913	423,100	546,247	969,902	5,687
1954[4]	971	676	108,304	236,726	100,262	181,083	196,683	370,129	544,064	923,577	6,370

1939[4]	590	(NA)	75,008	53,666	70,453	(NA)	44,942	83,727	108,640	192,367	(NA)

(NA) Not available.

[1] See text regarding comparability of 1963 data with earlier years.

[2] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4] Data for Alaska and Hawaii are not included.

May 1965

other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3A or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in a decrease of 9.6 million dollars, or approximately 2.3 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Men's Dress Shirts and Nightwear Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Men's Dress Shirts and Nightwear Industry amounted to $1,313 million. Of this total, $188 million were products primary to other industries; and $237 million were receipts for miscellaneous activities primarily for contract work done for others. The industry shipments of primary products represent 83 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 90 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $1,101 million of men's and boys' dress shirts and nightwear were shipped by all producers of these products. Of this total, $888 million, or 81 percent, were shipped by plants classified in Industry 2321, Men's Dress Shirts and Nightwear, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was also 81.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Manufacturers and jobbers of men's and boys' dress shirts and nightwear also report their cuttings and shipments of products annually on Census

Form MA-23A, Apparel. The 1963 product detail as collected on Census Form MA-23A is shown in table 3B.

The 1963 data as collected on Census Form MA-23A are also shown in summary table 3A together with the comparable totals reported in the census of manufactures. The data vary as a result of reporting differences for individual plants furnishing data in both surveys.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

	Receipts for contract work on men's dress shirts and nightwear done for others on their materials	(X)	[4]205,132	(X)	[4]156,006

Note: Differences between the data collected in the census of manufactures and the Current Annual Survey MA-23A, Apparel, are discussed in the text. More detailed cuttings data are shown in table 3B.

(NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report "Value of Shipments" in 1963 and "Value of Production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text). The quantity data reported on Census Annual Form MA-23A represent cuttings.

[2]Current survey data for 1958 were revised based on the 1958 Census of Manufactures.

[3]The total for men's and boys' shirts includes 804 thousand dozen uniform shirts as reported on Census Annual Form MA-23A. These figures are not included in the separate data shown for men's and boys' woven dress and sport shirts as reported on Census Annual Form MA-23A.

[4]Contract receipts are not included in the total shown for men's and boys' shirts (except work shirts) and nightwear. For 1963, contract receipts include all receipts for work on men's and boys' shirts, (except work shirts) and nightwear done for others on their materials regardless of the industry classification of the establishments. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2321, Men's Dress Shirts and Nightwear.

Table 3B.—QUANTITY OF MEN'S DRESS SHIRTS AND NIGHTWEAR CUT BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(As reported annually on Census Form MA-23A, Apparel)

Product code	Product	Total quantity of cuttings (1,000 dozens)	
		1963	1958

(NA) Not available.
[1]Cuttings are shown as reported in 1963 and 1958 by product code on Census Annual Form MA-23A.
[2]For 1958, men's and boys' uniform shirts were included with men's and boys' dress and business shirts.

PUBLICATION PROGRAM 1963 CENSUSES OF MANUFACTURES AND MINERAL INDUSTRIES

Results of the 1963 Censuses of Manufactures and Mineral Industries will be issued initially in preliminary reports which will furnish summary data. These reports will be superseded by more detailed final reports. An outline of the publication program is shown below.

PRELIMINARY REPORTS

Summary Series

Manufactures (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. General statistics will also be presented for industries grouped according to market categories—durable and nondurable goods industries. A second report will provide general statistics without industry detail for regions, States, and large standard metropolitan statistical areas.

Mineral Industries (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. A second report will provide general statistics by 2-digit industry group for regions and States.

Industry Series

Manufactures (about 370 reports). Separate reports for virtually all of the 430 manufacturing industries will give industry totals for general statistics for the United States and for regions and States. A product table in each report will give the quantity and value of shipments of the products classified in the industry for the United States.

Mineral Industries (about 45 reports). Separate reports for industries or for groups of industries for all of the 50 mineral industries will present general statistics for the United States and for regions and States. A product table will give the quantity and value of shipments of the products classified in the industry for the United States and for regions and States.

Area Series

Manufactures (51 reports). A separate report for each State and the District of Columbia will present general statistics for the State and for the larger standard metropolitan statistical areas within the State by 2-digit and selected 3-digit industries, and for most individual counties on an "all manufacturing" basis.

Subject Series

Manufactures (2 reports). One report will provide data on the number of establishments, employment, and value added by manufacturing for each 4-digit industry according to employment size of the establishment in each industry. A separate report will provide statistics on inventories for each 4-digit industry on a national basis; State data on inventories will also be provided.

Mineral Industries (one report). This report will provide number of establishments, employment, and value added in mining for each 4-digit industry according to employment size of the establishment in each industry.

FINAL REPORTS

All preliminary reports will be superseded by comparable final reports. After separate final reports have been issued, they will be assembled and reissued in cloth bindings as follows:

Manufactures

Volume I, Summary Statistics

Volume II, Industry Statistics
Part 1, Major Groups 20-28
Part 2, Major Groups 29-39

Volume III, Area Statistics

Mineral Industries

Volume I, General Summary and Industry Statistics

Volume II, Area Statistics

1963 CENSUS OF MANUFACTURES IN PUERTO RICO

A separate 1963 Census of Manufactures was conducted jointly by the Puerto Rico Planning Board, Government of the Commonwealth of Puerto Rico, and the U.S. Bureau of the Census. A report of the findings will include statistics of manufacturing activity by industry and geographic area on value added by manufacture, employment, payrolls, inventories, capital expenditures, etc.

Additional Information and Order Forms

A more detailed description of the publication program of the 1963 censuses, including tentative publication dates, is available free of charge. Separate announcement and order forms for the preliminary reports of the censuses of manufactures and mineral industries are also available free of charge. Requests for order forms should specify which report series is desired. All requests should be addressed to the Publications Distribution Section, Bureau of the Census, Washington, D.C., 20233.

1963 CENSUS OF MANUFACTURES

MC63(P)-23A-3

INDUSTRY SERIES

preliminary report

Men's and boys' underwear

SIC Code 2322

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Men's and Boys' Underwear Industry shipped products valued at $134 million, an increase of 10 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 2 percent from 1958 to a total of 12 thousand employees in 1963. Value added by manufacture amounted to $63 million in 1963, an increase of 22 percent from 1958.

The Men's and Boys' Underwear Industry includes establishments engaged primarily in the manufacture of men's and boys' underwear cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing underwear are classified in Industry 2254.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963 but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE MEN'S AND BOYS' UNDERWEAR INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2322)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	80	63	12,084	32,566	11,305	20,821	28,156	62,770	74,905	134,347	1,077
1958	91	73	12,326	30,285	11,108	19,338	25,111	51,621	70,439	121,646	1,006
1954[4]	82	60	9,385	18,923	8,827	15,325	16,289	31,453	55,157	86,282	1,168
1947[4]	103	69	7,269	11,330	6,929	12,326	9,847	20,348	29,405	49,753	(5)
1939[4]	54	(NA)	6,901	4,313	6,543	(NA)	3,728	6,415	10,278	16,693	(NA)

(NA) Not available.

[1] See text regarding comparability of 1963 data with earlier years.

[2] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period.

[4] Data for Alaska and Hawaii are not included.

[5] Less than $500 thousand.

March 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958 and 1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not singificantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments or value added data shown in table 1.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Men's and Boys' Underwear Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Men's and Boys' Underwear Industry amounted to $134 million. Of this total, $29 million were products primary to other industries; and $4 million were receipts for miscellaneous activities. The industry shipments of primary products represented 88 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 89 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $341 million of men's and boys' underwear were shipped by all producers of these products. Of this total, $115 million, or 34 percent, were shipped by plants classified in Industry 2322, Men's and Boys' Underwear, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 38.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment

as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE MEN'S AND BOYS' UNDERWEAR INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2322)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture[1]

(X) Not applicable.

[1]Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text).

[2]For Industry 2322, the value data were collected in the 1958 and 1963 Censuses of Manufactures while the quantity figures were obtained from the Annual Apparel Survey, MA-23A. The product codes are directly comparable to the product codes in the Current Industrial Reports Series MA-23A, except 2322141, "Men's and boys' undershorts made from woven fabrics," which is directly comparable to the 1958 Census of Manufactures product code.

[3]For 1958 includes 43 thousand dozen men's and boys' woven union suits. Separate data for this product were not collected for 1963.

MC63(P)-23A-4

INDUSTRY SERIES

preliminary report

Men's and boys' neckwear

SIC Code 2323

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Men's and Boys' Neckwear Industry shipped products valued at $121 million, an increase of 18 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 8 percent from 1958 to a total of 8.4 thousand employees in 1963. Value added by manufacture amounted to $57 million in 1963, an increase of 17 percent from 1958.

The Men's and Boys' Neckwear Industry includes establishments engaged primarily in the manufacture of men's, youths', and boys' neckties, scarfs, and mufflers cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing neckties, scarfs and mufflers are classified in Industry 2253.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE MEN'S AND BOYS' NECKWEAR INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2323)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	340	117	8,385	30,874	6,872	11,541	20,567	57,394	62,508	121,205	546
1958	362	111	7,734	26,835	6,177	10,786	17,538	48,938	53,169	102,405	584
1954[4]	403	127	9,483	27,797	8,051	13,789	19,056	49,351	57,327	107,556	(5)
1947[4]	413	134	10,744	25,367	9,246	16,942	18,485	50,708	62,980	113,688	(5)
1939[4]	381	(NA)	11,367	10,955	9,603	(NA)	7,346	19,795	26,598	46,393	(NA)

(NA) Not available.

[1]See text regarding comparability of 1963 data with earlier years.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

[5]Less than $500 thousand.

February 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3A or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in a decrease of $1 million or approximately 2 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Men's and Boys' Neckwear Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Men's and Boys' Neckwear Industry amounted to $121 million. Of this total, $2 million were products primary to other industries; and $15 million were receipts for miscellaneous activities. The industry shipments of primary products represented 99 percent of the total manufactured products shipments, primary and secondary. The 1958 ratio was 97 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $107 million of men's and boys' neckwear were shipped by all producers of these products. Of this total, $105 million, or 98 percent, were shipped by plants classified in Industry 2323, Men's and Boys' Neckwear, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was also 98.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted

aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-23A-5

INDUSTRY SERIES

preliminary report

Separate trousers

SIC Code 2327

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Separate Trousers Industry shipped products valued at $820 million, an increase of 81 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 42 percent from 1958 to a total of 73.5 thousand employees in 1963. Value added by manufacture amounted to $378 million in 1963, an increase of 81 percent from 1958.

The Separate Trousers Industry includes establishments engaged primarily in the manufacture of men's, youths', and boys' separate trousers and slacks. Establishments primarily engaged in manufacturing complete suits are classified in Industry 2311, and work pants in Industry 2328.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963 but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE SEPARATE TROUSERS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2327)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	729	421	73,463	222,752	67,600	125,802	185,057	378,402	448,076	819,680	6,428
1958	748	367	51,632	134,027	47,229	85,290	109,510	209,050	243,407	452,414	3,970
1954[4]	798	410	51,652	118,688	48,315	86,421	99,562	180,384	219,846	402,055	2,776
1947[4]	973	(NA)	47,279	91,400	44,006	83,265	75,620	159,439	174,600	334,039	(NA)
1939[4]	659	(NA)	(NA)	(NA)	31,327	(NA)	22,201	39,528	43,240	82,768	(NA)

(NA) Not available.

[1]See text regarding comparability of 1963 data with earlier years.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3A or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in a decrease of 3 million dollars, or approximately 1.4 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Separate Trousers Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Separate Trousers Industry amounted to $820 million. Of this total, $123 million were products primary to other industries; and $180 million were receipts for miscellaneous activities primarily for contract work done for others. The industry shipments of primary products represented 81 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 89 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $669 million of men's and boys' separate trousers were shipped by all producers of these products. Of this total, $516 million, or 77 percent, were shipped by plants classified in Industry 2327, Separate Trousers, while the remainder was shipped by plants classified in other industries The comparable percentage in 1958 was 71.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Manufacturers and jobbers of men's and boys' separate trousers also report their shipments of products annually on Census Form MA-23A, Apparel. The 1963 product detail as collected on Census Form MA-23A is shown in table 3C.

The 1963 data as collected on Census Form MA-23A are also shown in summary in table 3A together with the comparable totals reported in the census of manufactures. The data vary as a result of reporting differences for individual plants furnishing data in both surveys.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE SEPARATE TROUSERS INDUSTRY, BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2327)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture[1]

Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in this or associated industries or areas, or (b) because the industry was of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on this industry.)

[1]See text regarding comparability of 1963 and 1958 data.

[2]Less than $500 thousand.

Table 3A.—QUANTITY AND VALUE OF MEN'S AND BOYS' SEPARATE TROUSERS SHIPPED BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Includes quantity and value of these products reported not only by establishments classified in the Separate Trousers Industry but also by establishments making these items as "secondary" products in other industries. See text under "Value of Shipments")

Product code	Product	Total shipments including interplant transfers[1]			
		1963		1958	
		Quantity (1,000 units)	Value ($1,000)	Quantity (1,000 units)	Value ($1,000)
2327- --	Men's and boys' separate trousers:				
	As reported in the census	r192,353	r669,321	117,217	436,259
	As reported on Census Annual Form MA-23A	r194,534	r660,050	(2)	431,529
	Separate trousers, pants, slacks, and short pants, excluding uniform:				
23271 12	Men's:				
	As reported in the census	r124,731	499,029	73,404	321,135
	As reported on Census Annual Form MA-23A	r125,110	(NA)	(2)	(NA)
23271 14	Boys:				
	As reported in the census	63,312	141,304	40,402	93,533
	As reported on Census Annual Form MA-23A	65,114	(NA)	(2)	(NA)
23271 51	Men's and boys' separate uniform trousers:				
	As reported in the census	4,310	28,988	3,411	21,591
	As reported on Census Annual Form MA-23A	4,310	(NA)	(2)	(NA)
23279 11	Receipts for contract work on separate dress and sport trousers done for others on their materials	(X)	[3]163,778	(X)	[3]96,166

Note: Differences between the data collected in the census of manufactures and the Current Annual Survey MA-23A are discussed in the text. More detailed cuttings data are shown in table 3C.

(NA) Not available. (X) Not applicable. rRevised.

[1]Establishments in this industry were requested to report "Value of shipments" in 1963 and "Value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text.) The quantity data reported for Census Annual Form MA-23A represent cuttings.

[2]Current survey data for 1958 were revised based on the 1958 Census of Manufactures.

[3]Contract receipts are not included in the total shown for men's and boys' separate trousers. For 1963, contract receipts include all receipts for work on separate dress and sport trousers done for others on their materials, regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2327, Men's and Boys' Separate Trousers.

Table 3B.—INDEXES OF PRODUCTION AND UNIT VALUE FOR MEN'S AND BOYS' SEPARATE TROUSERS SHIPPED BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Indexes 1954 = 100)

Product code	Product and year	Production	Unit value
2327	Men's and boys' separate trousers.....1963...	201	90
	1958...	121	98

Table 3C.—QUANTITY OF SEPARATE TROUSERS CUT BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(As reported annually on Census Form MA-23A-Apparel)

Product code	Product	Total cuttings (1,000 units)	
		1963	1958
	Separate trousers, pants, slacks, and short pants, excluding uniform[1]	190,224	113,808
	Men's dress and sport trousers, excluding dress shorts, total	r116,733	[2]73,405
	More than 50 percent wool	15,442	[2]16,155
	Wood blends containing 50 percent or less wool	4,836	[3]
	More than 50 percent cotton	r57,138	[2]26,445

23271 52	50 percent or more cotton	38,433	19,452
23271 53	All other fabrics	17,271	11,302
	Dress shorts, total	5,482	5,574
23271 62	50 percent or more cotton	4,885	4,931
23271 63	All other fabrics	597	643
	Men's and boys' separate uniform trousers	4,310	(NA)
23271 71	Made under State and Federal Government contracts	1,340	(NA)
23271 75	All other tailored uniform trousers	2,970	(NA)

(NA) Not available. rRevised.

[1]Production as reported by product code in 1963 on Census Annual Form MA-23A.

[2]For 1958, men's dress shorts were included with men's dress and sport trousers.

[3]Wool blends containing 50 percent or less wool and cotton blends, 50 percent or more cotton, were not collected separately in 1958 and were included in other fabrics.

PUBLICATION PROGRAM 1963 CENSUSES OF MANUFACTURES AND MINERAL INDUSTRIES

Results of the 1963 Censuses of Manufactures and Mineral Industries will be issued initially in preliminary reports which will furnish summary data. These reports will be superseded by more detailed final reports. An outline of the publication program is shown below.

PRELIMINARY REPORTS

Summary Series

Manufactures (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. General statistics will also be presented for industries grouped according to market categories—durable and nondurable goods industries. A second report will provide general statistics without industry detail for regions, States, and large standard metropolitan statistical areas.

Mineral Industries (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. A second report will provide general statistics by 2-digit industry group for regions and States.

Industry Series

Manufactures (about 370 reports). Separate reports for virtually all of the 430 manufacturing industries will give industry totals for general statistics for the United States and for regions and States. A product table in each report will give the quantity and value of shipments of the products classified in the industry for the United States.

Mineral Industries (about 45 reports). Separate reports for industries or for groups of industries for all of the 50 mineral industries will present general statistics for the United States and for regions and States. A product table will give the quantity and value of shipments of the products classified in the industry for the United States and for regions and States.

Area Series

Manufactures (51 reports). A separate report for each State and the District of Columbia will present general statistics for the State and for the larger standard metropolitan statistical areas within the State by 2-digit and selected 3-digit industries, and for most individual counties on an "all manufacturing" basis.

Subject Series

Manufactures (2 reports). One report will provide data on the number of establishments, employment, and value added by manufacturing for each 4-digit industry according to employment size of the establishment in each industry. A separate report will provide statistics on inventories for each 4-digit industry on a national basis; State data on inventories will also be provided.

Mineral Industries (one report). This report will provide number of establishments, employment, and value added in mining for each 4-digit industry according to employment size of the establishment in each industry.

FINAL REPORTS

All preliminary reports will be superseded by comparable final reports. After separate final reports have been issued, they will be assembled and reissued in cloth bindings as follows:

Manufactures

Volume I, Summary Statistics

Volume II, Industry Statistics
Part 1, Major Groups 20-28
Part 2, Major Groups 29-39

Volume III, Area Statistics

Mineral Industries

Volume I, General Summary and Industry Statistics

Volume II, Area Statistics

1963 CENSUS OF MANUFACTURES IN PUERTO RICO

A separate 1963 Census of Manufactures was conducted jointly by the Puerto Rico Planning Board, Government of the Commonwealth of Puerto Rico, and the U.S. Bureau of the Census. A report of the findings will include statistics of manufacturing activity by industry and geographic area on value added by manufacture, employment, payrolls, inventories, capital expenditures, etc.

Additional Information and Order Forms

A more detailed description of the publication program of the 1963 censuses, including tentative publication dates, is available free of charge. Separate announcement and order forms for the preliminary reports of the censuses of manufactures and mineral industries are also available free of charge. Requests for order forms should specify which report series is desired. All requests should be addressed to the Publications Distribution Section, Bureau of the Census, Washington, D.C., 20233.

1963 CENSUS OF MANUFACTURES

MC63(P)-23A-6

INDUSTRY SERIES

preliminary report

Work clothing SIC Code 2328

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Work Clothing Industry shipped products valued at $814 million, an increase of 18 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 4 percent from 1958 to a total of 62 thousand employees in 1963. Value added by manufacture amounted to $328 million in 1963, an increase of 28 percent from 1958.

The Work Clothing Industry includes establishments engaged primarily in the manufacture of men's and boys' work shirts, pants, and other work clothing and washable service apparel.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963.

Table 1.—GENERAL STATISTICS FOR THE WORK CLOTHING INDUSTRY IN THE UNITED STATES: 1963 AND 1958

(SIC code 2328)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	438	352	62,243	178,872	57,486	104,924	149,179	327,787	501,541	814,454	5,843
1958[4]	500	396	64,780	154,834	59,328	104,481	132,570	255,481	434,820	689,819	3,452

[1] See text regarding comparability of 1963 data with earlier years.

[2] Includes expenditures for plants under construction but not in operation.

[3] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4] A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that the industry data are not comparable with information collected for prior years. The definition for Industry 2328 was revised to include men's and boys' work clothing and washable service apparel as well as work shirts. Under the previous classification system, the old S.I.C. Industry 2328 covered only work shirts, while men's and boys' work clothing (except work shirts) and washable service apparel were included in the old S.I.C. Industry 2329, Men's and Boys' Clothing, N.E.C.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958 and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "Value of shipments" in 1963 and "Value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3A or in the industry's value of shipments or value added data shown in table 1.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Work Clothing Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Work Clothing Industry amounted to $814 million. Of this total, $125 million were products primary to other industries; and $109 million were receipts for miscellaneous activities including commission receipts for work done for others. The industry shipments of primary products represent 82 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 84 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $636 million of work clothing were shipped by all producers of these products. Of this total, $580 million, or 91 percent, were shipped by plants classified in Industry 2328, Work Clothing, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 95.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments producing work clothing also report their cuttings of these products annually on Census Form MA-23A, Apparel. The summary data as collected in the apparel survey and as collected in the census of manufactures are shown in table 3A.

The minor variation in the two sets of data is caused by small reporting differences for a number of plants reporting in both surveys. The more detailed data collected in the annual apparel survey are shown in table 3B.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports

will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE WORK CLOTHING INDUSTRY, BY GEOGRAPHIC AREAS: 1963 AND 1958

Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in this or associated industries or areas, or (b) because the industry was of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on this industry.)

[1] See text regarding comparability of 1963 and 1958 data.

[2] Less than $500 thousand.

Table 3A.—QUANTITY AND VALUE OF WORK CLOTHING SHIPPED BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Includes quantity and value of these products reported not only by establishments classified in the Work Clothing Industry but also by establishments making these items as "secondary" products in other industries. See text under "Value of Shipments")

Product code	Product	Total shipments including interplant transfers[1]			
		1963		1958	
		Quantity (1,000 doz.)	Value ($1,000)	Quantity (1,000 doz.)	Value ($1,000)
2328- --	Work clothing, total	23,527	635,713	20,825	526,141
23281 13	Men's and boys' work shirts:				
	As reported in the census of manufactures	3,858	87,287	4,147	78,304
	As reported on Census Annual Form, MA-23A	3,835	87,361	(2)	(2)
23282 12	Men's and boys' work clothing (excluding work shirts) and washable service apparel:				
	As reported in the census of manufactures	19,669	548,426	16,678	447,837
	As reported on Census Annual Form, MA-23A	19,368	542,598	(2)	(2)
23289 15	Receipts for contract work on work shirts, work clothing, and washable service apparel done for others on their material	(X)	[3]83,361	(X)	[3]55,995

Note: Differences between the data collected in the census of manufactures and the Current Annual Survey MA-23A are discussed in the text. More detailed cuttings data are shown in table 3B.

(X) Not applicable.

[1]Establishments in this industry were requested to report "Value of shipments" in 1963 and "Value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text). The quantity data reported on Census Annual Form MA-23A represent cuttings.

[2]Current survey data for 1958 were revised based on the 1958 Census of Manufactures.

[3]Contract receipts are not included in the total shown for work clothing. For 1963, contract receipts include all receipts for work on work shirts, work clothing, and washable service apparel done for others on their materials regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2328, Work Clothing.

Table 3B.—QUANTITY OF WORK CLOTHING CUT BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Includes cuttings not only by establishments classified in the Work Clothing Industry but also by establishments making these items as "secondary" products in other industries)

Product code	Product	Quantity of cuttings (1,000 dozens)[1]	
		1963	1958
2328- --	Work clothing, total	23,203	20,825

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Men's and boys' clothing, n.e.c.

SIC Code 2329

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Men's and Boys' Clothing, N.E.C., Industry shipped products valued at $404 million, an increase of 10 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 11 percent from 1958 to a total of 36 thousand employees in 1963. Value added by manufacture amounted to $184 million in 1963, an increase of 22 percent from 1958.

The Men's and Boys' Clothing, N.E.C., Industry includes establishments engaged primarily in the manufacture of men's, youths', and boys' clothing, not elsewhere classified. Establishments engaged primarily in manufacturing polo and sport shirts are classified in Industry 2321; separate trousers in Industry 2327; work clothing in Industry 2328; and leather and sheeplined garments in Industry 2386. Knitting mills engaged primarily in manufacturing outerwear are classified in Industry 2253.

A revision in the definition of the Men's and Boys' Clothing, N.E.C., Industry was introduced in the 1957 Standard Industrial Classification. This revision excludes the output of men's and boys' work clothing and washable service apparel, which are now included in Industry 2328, Work Clothing, As a result, 1963 data for Industry 2329, Men's and Boys' Apparel, N.E.C., are not comparable with statistics for this industry for years prior to 1958.

Table 1.—GENERAL STATISTICS FOR THE MEN'S AND BOYS' CLOTHING, N.E.C., INDUSTRY IN THE UNITED STATES: 1963 AND 1958

(SIC code 2329)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	554	366	35,932	115,643	32,299	57,107	92,752	183,570	223,374	404,014	2,825
1958[4]	539	324	32,392	93,119	28,606	52,439	73,847	149,951	216,599	365,963	2,369

[1] See text regarding comparability of 1963 data with earlier years.

[2] Includes expenditures for plants under construction but not in operation.

In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4] A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that the industry data are not comparable with the information collected for prior years. The definition for Industry 2329 was revised to exclude the output of men's and boys' work clothing and washable service apparel. These products are now included in Industry 2328, Work Clothing.

August 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS, A. Ross Eckler, Director

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958 and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3A or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in a decrease of 1.7 million dollars, or approximately 1 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Men's and Boys' Clothing, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Men's and Boys' Clothing, N.E.C., Industry amounted to $404 million. Of this total, $60 million were products primary to other industries; and $72 million were receipts for miscellaneous activities including commission receipts for work done for others. The industry shipments of primary products represent 82 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 78 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $601 million of men's and boys' clothing, n.e.c., were shipped by all producers of these products. Of this total, $272 million, or 45 percent, were shipped by plants classified in Industry 2329, Men's and Boys' Clothing, N.E.C., while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 57.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Manufacturers and jobbers of men's and boys' clothing, n.e.c., also report their shipments of products annually on Census Form MA-23A, Apparel.

In view of the differences between the figures for men's and boys' sweaters, a review was undertaken of the data reported in each survey. This analysis revealed that a number of producers were omitted from the annual survey. These plants are being added to the MA-23A survey for 1964 and revised detailed data for 1963 will be included in the 1964 report.

The remaining differences are the result of reporting variations for individual plants furnishing data in both surveys.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in

tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE MEN'S AND BOYS' CLOTHING, N.E.C., INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2329)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture[1]

Note: Differences between the data collected in the census of manufactures and the Current Annual Survey MA-23A are discussed in the text. More detailed cuttings data are shown in table 3B.

(NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report "Value of Shipments" in 1963 and "Value of Production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text). The quantity data reported for Census Annual Form MA-23A represent cuttings.

[2]Establishments engaged primarily in the manufacture of men's and boys' suits, coats, and overcoats are classified in Industry 2311; polo and sport shirts in Industry 2321; underwear in Industry 2322; neckwear in Industry 2323; separate trousers in Industry 2327; work clothing in Industry 2328; robes in Industry 2384; raincoats in Industry 2385; and leather and sheeplined garments in Industry 2386.

[3]Current survey data for 1958 were revised based on the 1958 Census of Manufactures.

[4]Contract receipts are not included in the total shown for men's and boys' clothing, n.e.c. For 1963, contract receipts include all receipts for work on men's and boys' clothing, n.e.c., for others on their materials regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2329, Men's and Boys' Clothing, N.E.C.

Table 3B.—QUANTITY OF MEN'S AND BOYS' CLOTHING, N.E.C., CUT BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(As reported annually on Census Form MA-23A, Apparel)

[2]Boys' nylon sweaters included with boys' sweaters made from other yarns.

BCD...

a unique tool for economic analysis

BUSINESS CYCLE DEVELOPMENTS is published monthly for specialists concerned with the analysis of current business conditions. It summarizes many of the available economic time series in convenient form for short-term evaluation and interpretation and supplements other Department of Commerce reports on the economy. The features of this report are:

- The arrangement of series according to their usual timing relations during the course of the business cycle.
- The inclusion of special analytical measures and historical cyclical comparisons that help in evaluating the current stage of the business cycle.
- The speed with which the data are collected, assembled, and published. BCD is issued about the 22d of each month covering data for the preceding month.

About 90 principal indicators and over 300 components are used for the different measures shown. The movements of the series are shown against the background of the expansions and contractions of the general business cycle so that "leads" and "lags" can readily be detected and unusual cyclical developments spotted. Since almost all of the basic data presented in this report are available in other published sources, the value of BCD lies in its analytical arrangement and speed of publication.

The presentation and classification of the time series in the BCD report follows the business indicators approach. The classification of series and the business cycle turning dates are those designed by the National Bureau of Economic Research which, in recent years, has been a leader in this field of investigation.

For sale by the Government Printing Office, Washington, D.C. 20402. $6 a year ($1.50 additional for foreign mailing). Single copies, 60¢ each.

1963 CENSUS OF MANUFACTURES

MC63(P)-23B-1

INDUSTRY SERIES

preliminary report

Blouses SIC Code 2331

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Blouse Industry shipped products valued at $613 million, an increase of 35 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 23 percent from 1958 to a total of 58 thousand employees in 1963. Value added by manufacture amounted to $298 million in 1963, an increase of 49 percent from 1958.

The Blouse Industry includes establishments engaged primarily in the manufacture of women's, misses', and juniors' blouses, waists, and shirts. Knitting mills primarily making blouses are classified in Industry 2253, Knit Outerwear Mills.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.--GENERAL STATISTICS FOR THE BLOUSE INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2331)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	1,191	721	58,310	179,419	52,811	93,940	146,293	298,399	314,499	612,649	4,376
1958	1,260	735	47,484	125,501	41,867	72,572	98,251	200,164	25,185	454,103	2,277
1954[4]	1,245	700	42,980	99,818	39,567	67,901	82,201	165,913	211,332	377,353	2,445

1939[4]	302	(NA)	10,950	10,164	9,673	(NA)	7,392	16,853	24,878	41,731	(NA)

(NA) Not available.

[1] See text regarding comparability of 1963 data with earlier years.

[2] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4] Data for Alaska and Hawaii are not included.

July 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments or value added by manufacture data shown in table 1.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Blouse Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Blouse Industry amounted to $613 million. Of this total, $42 million were products primary to other industries; and $161 million were receipts for miscellaneous activities primarily for contract work done for others. The industry shipments of primary products represent 91 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 89 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $548 million of blouses were shipped by all producers of these products. Of this total, $409 million, or 75 percent, were shipped by plants classified in Industry 2331, Blouses, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 78.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments shipping women's, misses', and juniors' blouses also report annually on Census Form MA-23A, Annual Apparel Survey. The 1963 data compiled from this survey are shown in table 3, together with the comparable totals reported in the census of manufactures.

In view of the differences between these figures, a review was undertaken of the data reported in each survey. This analysis revealed that a significant number of producers were omitted from the annual survey. These plants are being added to the MA-23A Survey for 1964 and revised detailed data for 1963 will be included in the 1964 report.

The remaining variations are the result of reporting differences for individual plants furnishing data in both surveys. These are being reviewed with the companies and any revisions that may be necessary to the current survey data will also be included in the 1964 report. Any revisions that may be necessary for the census of manufactures report will be included in the final report for this industry.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE BLOUSE INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2331)

Geographic area	1963											1958

23319 11	Receipts for contract work on blouses, waists, and shirts, done for others on their materials	(X)	[4]152,939	(X)	[4]110,050

Note: Differences between the data collected in the census of manufactures and the current annual survey MA-23A are discussed in the text.
(NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text). The quantity data reported for Census Annual Form MA-23A represent cuttings.

[2]Current survey data for 1958 were revised based on the 1958 Census of Manufactures.

[3]For 1963, a significant number of firms classified in Industry 2331, Blouses, provided no information on their detailed type of activity (manufacturer, jobber, or contractor), dollar value of their shipments of blouses, or receipts for work done on blouses from materials owned by others. The figure given is an estimate based on their 1963 payroll, against which industry averages were applied.

[4]Contract receipts are not included in the total shown for women's blouses. For 1963, contract receipts include all receipts for work on women's blouses done for others on their materials, regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2331, Blouses.

1963 CENSUS OF MANUFACTURES

MC63(P)-23B-2

INDUSTRY SERIES

preliminary report

Dresses SIC Code 2335

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Dress Industry shipped products valued at $2,408 million, an increase of 18 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 9 percent from 1958 and 8 percent from 1962 to a total of 200.8 thousand employees in 1963. Value added by manufacture amounted to $1,183 million in 1963, an increase of 22 percent from 1958 and 15 percent from 1962.

The Dress Industry includes establishments engaged primarily in the manufacture of women's, misses', and juniors' dresses, including ensemble dresses, whether sold by the piece or by the dozen. Dresses made in knitting mills are classified in Industry 2253, Knit Outerwear Mills.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE DRESS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2335)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]	Standard error of estimate (percent) for number of employees column[3]

(NA) Not available. (X) Not applicable. [r] Revised.

[1] See text regarding comparability of 1963 data with earlier years.

[2] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[4] Data for Alaska and Hawaii are not included.

June 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1954-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments or value added data shown in table 1.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Dress Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Dress Industry amounted to $2,408 million. Of this total, $74 million were products primary to other industries; and $461 million were receipts for miscellaneous activities, primarily contract work. The industry shipments of primary products represent 96 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 97 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $1,953 million of dresses were shipped by all producers of these products. Of this total, $1,873 million, or 96 percent, were shipped by plants classified in Industry 2335, Dresses, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 98 percent.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments shipping women's, misses' and juniors' dresses also report their shipments of products annually on Census Form MA-23A, Apparel. The 1963 data as collected on Census Form MA-23A are shown in table 3 together with comparable data reported in the census of manufactures.

In view of the differences between these figures, a review was undertaken of the data reported in each survey. This analysis revealed that a significant number of producers were omitted from the annual survey. These plants are being added to the MA-23A survey for 1964 and revised detailed data for 1963 will be included in the 1964 report.

The remaining differences are the result of reporting differences for individual plants furnishing data in both surveys. These are being reviewed with the companies and any revisions that may be necessary to the current survey data will also be included in the 1964 report. Any revisions that may be necessary for the census of manufactures report will be included in the final report for this industry.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE DRESS INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2335)

- Represents zero. (X) Not applicable.

[1]Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text). The quantity data reported on Census Annual Form MA-23A, Apparel, represent cuttings rather than shipments. The reason for the differences between the census and current survey data is discussed in the text.

[2]Current survey data for 1958 were revised based on the 1958 Census of Manufactures.

[3]Comparable data for 1958 are not available. The price-line limits of the 1963 intervals vary from $3.00 to $5.00 from those used in 1958. The magnitude of change in comparability may be obtained from Current Industrial Reports Series M23A(62)-2, Annual Apparel Survey, page 7. 1958 data for the old price lines are shown in the 1958 Census of Manufactures report.

[4]For 1963, a significant number of firms classified in Industry 2335, Dresses, provided no detailed information on their type of activity (manufacturer, jobber, or contractor), dollar value of their shipments of dresses, or receipts for work done on dresses from materials owned by others. The figure given is an estimate based on their 1963 payroll, against which industry averages were applied.

[5]Contract receipts are not included in the total shown for women's, misses', and juniors' dresses. For 1963, contract receipts include all receipts for work on women's, misses', and juniors' dresses done for others on their materials regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2335, Dresses.

1963 CENSUS OF MANUFACTURES

MC63(P)-23B-3

INDUSTRY SERIES

preliminary report

Women's suits, coats and skirts

SIC Code 2337

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Women's Suits, Coats and Skirts Industry shipped products valued at $1,522 million, an increase of 23 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 6 percent from 1958 to a total of 89 thousand employees in 1963. Value added by manufacture amounted to $638 million in 1963, an increase of 24 percent from 1958.

The Women's Suits, Coats and Skirts Industry includes establishments engaged primarily in the manufacture of women's, misses', and juniors' suits, skirts, and coats except fur coats and raincoats. Establishments primarily engaged in manufacturing fur garments are classified in Industry 2371, raincoats in Industry 2385, and knitting mills primarily engaged in manufacturing knit outerwear in Industry 2253.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957

Table 1.—GENERAL STATISTICS FOR THE WOMEN'S SUITS, COATS AND SKIRTS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2337)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1] ($1,000)	Cost of materials ($1,000)	Value of shipments[1] ($1,000)	Capital expenditures, new[2] ($1,000)
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)				
1963[3]	2,512	1,377	88,853	362,314	75,957	134,231	272,251	638,061	884,598	1,522,348	12,276

(NA) Not available.

[1]See text regarding comparability of 1963 data with earlier years.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

July 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1939 and 1947, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3A or in the industry's value of shipments and value added by manufacture shown in table 1.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Women's Suits, Coats and Skirts Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Women's Suits, Coats and Skirts Industry amounted to $1,522 million. Of this total, $121 million were products primary to other industries; and $221 million were receipts for miscellaneous activities. The industry shipments of primary products represent 91 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 93 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $1,265 million of women's suits, coats and skirts were shipped by all producers of these products. Of this total, $1,180 million, or 93 percent, were shipped by plants classified in Industry 2337, Women's Suits, Coats and Skirts, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was also 93.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments shipping women's suits, coats and skirts also report annually on Census Form MA-23A, Annual Apparel Survey. The 1963 data compiled from this survey are shown in table 3A, together with the comparable totals reported in the Census of Manufactures. The more detailed cuttings data for 1958 and 1963 as reported on Census Annual Form MA-23A are shown in table 3B.

In view of the differences between the totals obtained from the two reports, a review was undertaken of the data reported in each survey. The greatest part of the difference was accounted for

by the omission of a number of firms from the Annual Apparel Survey. These plants are being added to the MA-23A survey for 1964 and revised detailed data for 1963 will be included in the 1964 report.

The remaining variations are the result of reporting differences for individual plants furnishing data in both surveys. These are being reviewed with the companies and any revisions that may be necessary to the current survey data will also be included in the 1964 report. Any revisions that may be necessary for the census of manufactures report will be included in the final report for this industry.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE WOMEN'S SUITS, COATS AND SKIRTS INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2337)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)		($1,000)

Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in this or associated industries or areas, or (b) because the industry was of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on this industry.)

(D) Withheld to avoid disclosing figures for individual companies.

[1]See text regarding comparability of 1963 data with 1958.

[2]Less than $500 thousand.

Table 3A.—QUANTITY AND VALUE OF WOMEN'S SUITS, COATS AND SKIRTS SHIPPED BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Includes quantity and value of these products reported not only by establishments classified in the Women's Suits, Coats and Skirts Industry but also by establishments making these items as "secondary" products in other industries. See text under "Value of Shipments")

Note: Differences between the data collected in the census of manufactures and the Current Annual Survey MA-23A are discussed in the text. More detailed cuttings data are shown in table 3B.

- Represents zero. (NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report value of shipments in 1963 and value of production in 1958. This change does not significantly affect the comparability of the data for the two years (see text). The quantity data reported on Census Annual Form MA-23A, Apparel, represent cuttings.

[2]Current survey data for 1958 were revised, based on the 1958 Census of Manufactures.

[3]Quantity estimated, based on establishments reporting detailed data.

[4]For 1963, a significant number of firms classified in Industry 2337, Women's Suits, Coats and Skirts, provided no detailed information on their type of activity (manufacturer, jobber, or contractor), dollar value of their shipments of Women's Suits, Coats and Skirts, or receipts for work done on Women's Suits, Coats and Skirts from materials owned by others. The figure given is an estimate based on their 1963 payroll, against which industry averages were applied.

[5]Contract receipts are not included in the total shown for women's suits, coats and skirts. For 1963, contract receipts include all receipts for work on women's suits, coats and skirts done for others on their materials regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2337, Women's Suits, Coats and Skirts.

Table 3B.—QUANTITY OF WOMEN'S SUITS, COATS AND SKIRTS CUT BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Includes quantity of products cut not only by establishments classified in the Women's Suits, Coats and Skirts Industry but also by establishments making these items as "secondary" products in other industries)

PUBLICATION PROGRAM 1963 CENSUSES OF MANUFACTURES AND MINERAL INDUSTRIES

Results of the 1963 Censuses of Manufactures and Mineral Industries will be issued initially in preliminary reports which will furnish summary data. These reports will be superseded by more detailed final reports. An outline of the publication program is shown below.

PRELIMINARY REPORTS

Summary Series

Manufactures (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. General statistics will also be presented for industries grouped according to market categories—durable and nondurable goods industries. A second report will provide general statistics without industry detail for regions, States, and large standard metropolitan statistical areas.

Mineral Industries (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. A second report will provide general statistics by 2-digit industry group for regions and States.

Industry Series

Manufactures (about 370 reports). Separate reports for virtually all of the 430 manufacturing industries will give industry totals for general statistics for the United States and for regions and States. A product table in each report will give the quantity and value of shipments of the products classified in the industry for the United States.

Mineral Industries (about 45 reports). Separate reports for industries or for groups of industries for all of the 50 mineral industries will present general statistics for the United States and for regions and States. A product table will give the quantity and value of shipments of the products classified in the industry for the United States and for regions and States.

Area Series

Manufactures (51 reports). A separate report for each State and the District of Columbia will present general statistics for the State and for the larger standard metropolitan statistical areas within the State by 2-digit and selected 3-digit industries, and for most individual counties on an "all manufacturing" basis.

Subject Series

Manufactures (2 reports). One report will provide data on the number of establishments, employment, and value added by manufacturing for each 4-digit industry according to employment size of the establishment in each industry. A separate report will provide statistics on inventories for each 4-digit industry on a national basis; State data on inventories will also be provided.

Mineral Industries (one report). This report will provide number of establishments, employment, and value added in mining for each 4-digit industry according to employment size of the establishment in each industry.

FINAL REPORTS

All preliminary reports will be superseded by comparable final reports. After separate final reports have been issued, they will be assembled and reissued in cloth bindings as follows:

Manufactures

Volume I, Summary Statistics

Volume II, Industry Statistics
Part 1, Major Groups 20-28
Part 2, Major Groups 29-39

Volume III, Area Statistics

Mineral Industries

Volume I, General Summary and Industry Statistics

Volume II, Area Statistics

1963 CENSUS OF MANUFACTURES IN PUERTO RICO

A separate 1963 Census of Manufactures was conducted jointly by the Puerto Rico Planning Board, Government of the Commonwealth of Puerto Rico, and the U.S. Bureau of the Census. A report of the findings will include statistics of manufacturing activity by industry and geographic area on value added by manufacture, employment, payrolls, inventories, capital expenditures, etc.

Additional Information and Order Forms

A more detailed description of the publication program of the 1963 censuses, including tentative publication dates, is available free of charge. Separate announcement and order forms for the preliminary reports of the censuses of manufactures and mineral industries are also available free of charge. Requests for order forms should specify which report series is desired. All requests should be addressed to the Publications Distribution Section, Bureau of the Census, Washington, D.C., 20233.

INDUSTRY SERIES

preliminary report

Women's outerwear, n.e.c.

SIC Code 2339

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Women's Outerwear, N.E.C., Industry shipped products valued at $720 million, an increase of 41 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 30 percent from 1958 to a total of 58 thousand employees in 1963. Value added by manufacture amounted to $325 million in 1963, an increase of 42 percent from 1958.

The Women's Outerwear, N.E.C., Industry includes establishments engaged primarily in the manufacture of women's, misses', and juniors' outerwear other than blouses, dresses, suits, skirts, and coats cut and sewed from purchased woven or knit fabric. Important products of this industry are bathing suits, sweaters, and washable service apparel. Knitting mills primarily engaged in manufacturing outerwear are classified in Industry 2253, Knit Outerwear Mills.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report

Table 1.—GENERAL STATISTICS FOR THE WOMEN'S OUTERWEAR, N.E.C., INDUSTRY IN THE UNITED STATES FOR 1963 AND 1958

(SIC code 2339)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1] ($1,000)	Cost of materials ($1,000)	Value of shipments[1] ($1,000)	Capital expenditures, new[2] ($1,000)
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)				
1963[3]	1,278	695	57,564	193,174	50,079	90,839	146,036	324,595	393,333	720,391	6,843
1958[4]	1,155	553	44,146	132,013	37,696	68,999	96,918	229,368	282,662	509,569	3,577

[1]See the text regarding comparability of 1963 data with 1958.

[2]Includes expenditures for plants under construction but not in operation.

[3]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4]A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1963 and 1958 are not comparable with those for earlier years.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

Figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

Value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in 1958. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3A or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in a decrease of 1.9 million dollars, or approximately 1 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Women's, Outerwear, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Women's, Outerwear, N.E.C., Industry amounted to $720 million. Of this total, $99 million were products primary to other industries; and $133 million were receipts for miscellaneous activities. The industry shipments of primary products represented 83 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 81 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $907 million of women's, misses' and juniors' outerwear, n.e.c., were shipped by all producers of these products. Of this total, $489 million, or 54 percent, were shipped by plants classified in Industry 2339, Women's, Outerwear, N.E.C., while the remainder was shipped by plants classified in other industries.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments shipping Women's, Misses' and Juniors' Outerwear, N.E.C., also report their shipments of products annually on Census Form MA-23A, Apparel. The 1963 data as collected on Census Form MA-23A are shown in table 3A together with the comparable totals reported in the census of manufactures. Detailed cuttings data are shown in table 3B.

In view of the differences between these figures, a review was undertaken of the data reported in each survey. This analysis revealed that a significant number of producers were omitted from the annual survey. These plants are being added to the MA-23A survey for 1964 and revised detailed data for 1963 will be included in the 1964 report.

The remaining differences are the result of reporting differences for individual plants furnishing data in both surveys. These are being reviewed with the companies and any revisions that may be necessary to the current survey data will also be included in the 1964 report. Any revisions that may be necessary for the census of manufactures report will be included in the final report for this industry.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Note: Differences between the data collected in the census of manufactures and the Current Annual Apparel Survey MA-23A are discussed in the text. More detailed cuttings data are shown in table 3B.

n.e.c. Not elsewhere classified. (NA) Not available. (X) Not applicable. rRevised.

[1]Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text). The quantity data reported on Census Annual Form MA-23A, Apparel, represent cuttings.

[2]Does not include the following types of outerwear which are being published in separate reports for the industries indicated:

Women's, misses', and juniors' blouses, waists and shirts	SIC 2331
Women's, misses', and juniors' dresses	SIC 2335
Women's, misses', and juniors' coats, suits, separate jackets and skirts	SIC 2337

[3]For 1963 and 1958, quantity and value data for aprons, hoovers, and smocks are included in the census of manufactures, but excluded from Census Annual Form MA-23A.

[4]Current survey data for 1958 were revised based on the 1958 Census of Manufactures.

[5]Contract receipts are not included in the total shown for women's, misses', and juniors' outerwear, n.e.c. For 1963, contract receipts include all receipts for work on women's, misses', and juniors' outerwear, n.e.c., done for others on their materials regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2339, Women's, Misses', and Juniors' Outerwear, N.E.C.

Table 3B.—QUANTITY OF WOMEN'S, MISSES', AND JUNIORS' OUTERWEAR, N.E.C., CUT BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Includes quantity of products cut not only by establishments classified in the Women's, Misses', and Juniors' Outerwear, N.E.C., Industry but also by establishments making these items as "secondary" products in other industries)

Product code	Product	Total cuttings[1]	
		1963	1958
		Quantity (1,000 dozen)	Quantity (1,000 dozen)

PUBLICATION PROGRAM 1963 CENSUSES OF MANUFACTURES AND MINERAL INDUSTRIES

Results of the 1963 Censuses of Manufactures and Mineral Industries will be issued initially in preliminary reports which will furnish summary data. These reports will be superseded by more detailed final reports. An outline of the publication program is shown below.

PRELIMINARY REPORTS

Summary Series

Manufactures (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. General statistics will also be presented for industries grouped according to market categories—durable and nondurable goods industries. A second report will provide general statistics without industry detail for regions, States, and large standard metropolitan statistical areas.

Mineral Industries (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. A second report will provide general statistics by 2-digit industry group for regions and States.

Industry Series

Manufactures (about 370 reports). Separate reports for virtually all of the 430 manufacturing industries will give industry totals for general statistics for the United States and for regions and States. A product table in each report will give the quantity and value of shipments of the products classified in the industry for the United States.

Mineral Industries (about 45 reports). Separate reports for industries or for groups of industries for all of the 50 mineral industries will present general statistics for the United States and for regions and States. A product table will give the quantity and value of shipments of the products classified in the industry for the United States and for regions and States.

Area Series

Manufactures (51 reports). A separate report for each State and the District of Columbia will present general statistics for the State and for the larger standard metropolitan statistical areas within the State by 2-digit and selected 3-digit industries, and for most individual counties on an "all manufacturing" basis.

Subject Series

Manufactures (2 reports). One report will provide data on the number of establishments, employment, and value added by manufacturing for each 4-digit industry according to employment size of the establishment in each industry. A separate report will provide statistics on inventories for each 4-digit industry on a national basis; State data on inventories will also be provided.

Mineral Industries (one report). This report will provide number of establishments, employment, and value added in mining for each 4-digit industry according to employment size of the establishment in each industry.

FINAL REPORTS

All preliminary reports will be superseded by comparable final reports. After separate final reports have been issued, they will be assembled and reissued in cloth bindings as follows:

Manufactures

Volume I, Summary Statistics

Volume II, Industry Statistics
Part 1, Major Groups 20-28
Part 2, Major Groups 29-39

Volume III, Area Statistics

Mineral Industries

Volume I, General Summary and Industry Statistics

Volume II, Area Statistics

1963 CENSUS OF MANUFACTURES IN PUERTO RICO

A separate 1963 Census of Manufactures was conducted jointly by the Puerto Rico Planning Board, Government of the Commonwealth of Puerto Rico, and the U.S. Bureau of the Census. A report of the findings will include statistics of manufacturing activity by industry and geographic area on value added by manufacture, employment, payrolls, inventories, capital expenditures, etc.

Additional Information and Order Forms

A more detailed description of the publication program of the 1963 censuses, including tentative publication dates, is available free of charge. Separate announcement and order forms for the preliminary reports of the censuses of manufactures and mineral industries are also available free of charge. Requests for order forms should specify which report series is desired. All requests should be addressed to the Publications Distribution Section, Bureau of the Census, Washington, D.C., 20233.

1963 CENSUS OF MANUFACTURES

MC63(P)-23C-1

INDUSTRY SERIES

preliminary report

Women's and children's underwear

SIC Code 2341

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Women's and Children's Underwear Industry shipped products valued at $970 million, an increase of 19 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 4 percent over 1958 to a total of 77 thousand employees in 1963. Value added by manufacture amounted to $427 million in 1963, an increase of 23 percent over 1958.

The Women's and Children's Underwear Industry includes establishments engaged primarily in the manufacture of women's, misses', children's, and infants' underwear and nightwear cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing underwear and nightwear are classified in Industry 2254, Knit Underwear Mills.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

Table 1.—GENERAL STATISTICS FOR THE WOMEN'S AND CHILDREN'S UNDERWEAR INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2341)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)

1939[4]	759	(NA)	(NA)	(NA)	39,859	(NA)	27,582	59,006	101,452	160,458	(NA)

(NA) Not available.

[1]See text regarding comparability of 1963 data with earlier years.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3A or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in a decrease of 3 million dollars, or less than 1 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Women's and Children's Underwear Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Women's and Children's Underwear Industry amounted to $970 million. Of this total, $58 million were products primary to other industries; and $114 million were receipts for miscellaneous activities. The industry shipments of primary products represent 93 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 96 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $942 million of women's, misses', juniors', children's, and infants' underwear and nightwear were shipped by all producers of these products. Of this total, $798 million, or 85 percent, were shipped by plants classified in Industry 2341, Women's and Children's Underwear, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 83.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments shipping women's and children's underwear and nightwear also report annually on Census Form MA-23A, Annual Apparel Survey. The 1963 data compiled from this survey are shown in

table 3A, together with the comparable totals reported in the census of manufactures. The more detailed cuttings data for 1958 and 1963 as reported on Census Annual Form MA-23A are shown in table 3B.

In view of the differences in the originally tabulated totals between the two reports, a review was undertaken of the data reported in each survey. The greatest part of the difference was accounted for by the omission of a number of firms from the Annual Apparel Survey. The data obtained from these plants were added to the annual apparel survey information for 1963 and are now included in tables 3A and 3B. This information is, therefore, not completely comparable to the previously published 1962 data issued in Current Industrial Reports Series M23A, Apparel. Revisions to the 1962 data will be shown in the final 1963 publication of this series which will be issued in the next few months.

There are also some reporting differences for establishments reporting in both surveys. Significant differences were resolved and may also affect the 1962 data.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE WOMEN'S AND CHILDREN'S UNDERWEAR INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2341)

Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in this or associated industries or areas, or (b) because the industry was of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on this industry.)

(D) Withheld to avoid disclosing figures for individual companies.

Note: Differences between the data collected in the census of manufactures and the Current Annual Survey MA-23A are discussed in the text. More detailed cuttings data are shown in table 3B.

(NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report "Value of shipments" in 1963 and "Value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text).

[2]Current survey data for 1958 were revised based on the 1958 Census of Manufactures.

[3]Quantity estimates based on the unit-value relationship reported for other products in the product class.

[4]The total for knit and woven nightwear as reported in the census is not completely comparable to the total reported on Census Annual Form MA-23A due to the inclusion of the value of lounging pajamas in the census total. These garments are not included in the MA-23A total since they are not collected in that survey. The remaining difference is accounted for by reporting differences between the two surveys.

[5]Contract receipts are not included in the total shown for women's and children's underwear. For 1963, contract receipts include all receipts for work on women's, misses', juniors', children's, and infants' underwear and nightwear done for others on their materials regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2341, Women's and Children's Underwear.

Table 3B.--QUANTITY OF WOMEN'S AND CHILDREN'S UNDERWEAR CUT BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Includes quantity of these products cut not only by establishments classified in the Women's and Children's Underwear Industry but also by establishments making these items as "secondary" products in other industries)

1963 CENSUS OF MANUFACTURES

MC63(P)-23C-2

INDUSTRY SERIES

preliminary report

Corsets and allied garments

SIC Code 2342

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Corsets and Allied Garments Industry shipped products valued at $593 million, an increase of 27 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 2 percent from 1958 to a total of 37 thousand employees in 1963. Value added by manufacture amounted to $310 million in 1963, an increase of 25 percent over 1958.

The Corsets and Allied Garments Industry includes establishments engaged primarily in the manufacture of corsets, corset accessories, and allied garments. Establishments primarily engaged in manufacturing surgical and orthopedic appliances are classified in Industry 3842, Surgical Appliances and Supplies.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing

Table 1.—GENERAL STATISTICS FOR THE CORSETS AND ALLIED GARMENTS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2342)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	350	233	37,034	139,542	31,288	56,557	95,295	309,615	290,702	592,603	3,508
1958	414	279	37,808	121,939	31,563	56,139	82,600	248,543	220,899	467,485	3,354
1954[4]	491	320	38,807	108,509	33,724	60,333	78,977	214,611	181,760	397,193	3,001

1939[4]	272	(NA)	23,061	25,147	18,765	(NA)	15,734	44,313	40,105	84,418	(NA)

(NA) Not available.

[1]See text regarding comparability of data with earlier years.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments shown in table 1. However, it does have a somwehat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in an increase of .8 million dollars, or less than 1 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classifiedin the Corsets and Allied Garments Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Corsets and Allied Garments Industry amounted to $593 million. Of this total, $59 million were products primary to other industries; and $21 million were receipts for miscellaneous activities. The industry shipments of primary products represent 95 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 96 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $531 million of corsets and allied garments were shipped by all producers of these products. Of this total, $513 million, or 97 percent, were shipped by plants classified in Industry 2342, Corsets and Allied Garments, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 98.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports

will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

23429 11	Receipts for contract work on corsets and allied garments[7]	(X)	33,948	(X)	34,751

(NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report "Value of shipments" in 1963 and "Value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text).

[2]For 1963, detailed quantity data were collected on Census Form MA-23J, Annual Survey of Brassieres, Corsets, and Allied Garments Shipments. Since this survey was begun in 1960, comparable data are not available for 1958. The 1958 data shown in this report are as collected in the census of manufactures for that year.

[3]Prices represent manufacturer's wholesale list price.

[4]For 1958, quantity and value data for brassieres and bandeaux were collected by type of fabric and are not available in the detail shown for 1963.

[5]On Census Annual Form MA-23J, value of shipments data were collected for corsets, girdles, and foundation garments, including surgical corsets and garter belts. This was reported for 1963 at $240,558 thousand and appears to be consistent with the value figure collected in the census after adjustments for the noncomparable items.

[6]For 1963, includes surgical corsets reported on Census Form MA-23J. Shipments data for surgical corsets, as published in table 3 of the 1963 preliminary report for Surgical Appliances and Supplies, SIC code 3842, show 74 thousand dozens valued at $6,479 thousand for 1963, and 46 thousand dozens valued at $2,717 for 1958.

[7]Contract receipts are not included in the total shown for corsets and allied garments. For 1963, contract receipts include all receipts for contract work on corsets and allied garments done for others on their materials, regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2342, Corsets and Allied Garments.

1963 CENSUS OF MANUFACTURES

MC63(P)-23C-3

INDUSTRY SERIES

preliminary report

Millinery SIC Code 2351

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Millinery Industry shipped products valued at $162 million, a decrease of 15 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 21 percent from 1958 to 1963 to a total of 14 thousand employees in 1963. Value added by manufacture amounted to $92 million in 1963, a decrease of 15 percent from 1958.

The Millinery Industry includes establishments engaged primarily in the manufacture of women's, misses', children's, and infants' millinery. Establishments primarily engaged in manufacturing millinery braid and trimmings are classified in Industry 2396.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

and Hawaii are included for 1958 and 1963 but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1954-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958 and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in an increase of $.3 million, or less than 1 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Millinery Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Millinery Industry amounted to $162 million. Of this total, $1 million were products primary to other industries; and $4 million were receipts for miscellaneous activities. The industry shipments of primary products represented 99 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was also 99 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $158 million of millinery were shipped by all producers of these products. Of this total, $157 million, or 99 percent, were shipped by plants classified in Industry 2351, Millinery, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was also 99.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities

of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.--GENERAL STATISTICS FOR THE MILLINERY INDUSTRY BY REGIONS AND STATES: 1963 AND 1958

(SIC code 2351)

Region and State	1963											1958

1963 CENSUS OF MANUFACTURES

MC63(P)-23C-4

INDUSTRY SERIES

preliminary report

Hats and caps SIC Code 2352

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Hats and Caps Industry shipped products valued at $168 million, a decrease of 2 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 6 percent from 1958 to 1963 to a total of 17 thousand employees in 1963. Value added by manufacture amounted to $91 million in 1963, virtually the same as in 1958.

The Hats and Caps Industry includes establishments engaged primarily in the manufacture of men's, youths', and boys' hats, caps, and hat bodies. Knitting mills primarily engaged in manufacturing caps are classified in Industry 2253.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963 but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE HATS AND CAPS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2352)

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (October). The figures for production workers, 1954-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in a decrease of .4 million dollars, or less than 1 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Hats and Caps Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Hats and Caps Industry amounted to $168 million. Of this total, $3 million were products primary to other industries; and $10 million were receipts for miscellaneous activities. The industry shipments of primary products represented 98 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 98 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $158 million of Hats and Caps were shipped by all producers of these products. Of this total, $155 million, or 98 percent, were shipped by plants classified in Industry 2352, Hats and Caps, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was also 98.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similiar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

INDUSTRY SERIES

preliminary report

Children's dresses and blouses

SIC Code 2361

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Children's Dress and Blouse Industry shipped products valued at $437 million, an increase of 23 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 2 percent from 1958 to a total of 35.4 thousand employees in 1963. Value added by manufacture amounted to $202 million in 1963, an increase of 21 percent from 1958.

The Children's Dress and Blouse Industry includes establishments engaged primarily in the manufacture of girls', children's, and infants' dresses, blouses, waists and shirts cut and sewed from purchased woven or knit fabric. Knitting mills engaged primarily in manufacturing outerwear are classified in Industry 2253, Knit Outerwear Mills.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE CHILDREN'S DRESS AND BLOUSE INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2361)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1] ($1,000)	Cost of materials ($1,000)	Value of shipments[1] ($1,000)	Capital expenditures, new[2] ($1,000)
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)				
1963[3]	665	409	35,437	113,848	31,640	55,384	89,244	202,057	237,129	437,231	2,661
1958	802	487	36,123	100,818	31,870	57,111	78,341	167,094	188,437	355,372	1,854
1954[4]	764	442	32,525	78,244	29,410	52,459	61,892	127,773	165,091	292,822	1,451

(NA) Not available.

[1] See text regarding comparability of 1963 data with earlier years.

[2] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4] Data for Alaska and Hawaii are not included.

August 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3A or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in an increase of 0.6 million dollars, or less than 1 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Children's Dress and Blouse Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Children's Dress and Blouse Industry amounted to $437 million. Of this total, $37 million were products primary to other industries; and $68 million were receipts for miscellaneous activities. The industry shipments of primary products represent 90 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 96 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $410 million of children's dresses and blouses were shipped by all producers of these products. Of this total, $332 million, or 81 percent, were shipped by plants classified in Industry 2361, Children's Dresses and Blouses, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 83.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments shipping children's dresses and blouses also report their shipments of products annually on Census Form MA-23A, Apparel. The 1963 summary data compiled from this survey are shown in table 3A, together with the comparable totals reported in the census of manufactures. The more detailed cuttings data as collected on Census Form MA-23A are shown in table 3B.

In view of the differences in the figures obtained from the two reports, a review was undertaken of the data reported in each survey. This analysis revealed that a number of producers were omitted from the annual survey. These plants are being added to the MA-23A survey for 1964 and revised detailed data for 1963 will be included in the 1964 report.

The greater part of the differences is the result of reporting variations for individual plants furnishing data in both surveys. These are being reviewed with the companies and any revisions that may be necessary to the current survey data will also be included in the 1964 report. Any revisions that may be necessary for the census of manufactures report will be included in the final report for the industry.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE CHILDREN'S DRESS AND BLOUSE INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2361)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new	All employees, number	Value added by manufacture[1]

	As reported on Census Annual Form MA-23A	6,468	60,371	(2)	(2)
23619 13	Receipts for contract work on girls', children's, and infants' dresses, blouses, waists and shirts	(X)	[5]61,086	(X)	[5]64,769

(NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text).

[2]1958 data were adjusted based on the Census of Manufactures.

[3]Quantity for this item was estimated based on the unit price relationship for all other items in this product class.

[4]These figures revise the previously published figures shown for this product in the preliminary report for Industry 2253, Knit Outerwear Mills.

[5]Contract receipts are not included in the total shown for children's dresses and blouses. For 1963, contract receipts include all receipts for work on children's dresses and blouses done for others on their materials regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2361, Children's Dresses and Blouses.

[1]Production as reported by product code in 1963 and 1958 on Census Annual Form MA-23A.

1963 CENSUS OF MANUFACTURES

MC63(P)-23C-6

INDUSTRY SERIES

preliminary report

Children's coats and suits

SIC Code 2363

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Children's Coat and Suit Industry shipped products valued at $163 million, a decrease of less than 1 percent since 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 8 percent from 1958 to a total of 11.8 thousand employees in 1963. Value added by manufacture amounted to $73 million in 1963, an increase of 6 percent from 1958.

The Children's Coat and Suit Industry includes establishments engaged primarily in the manufacture of girls', children's, and infants' coats and suits, cut and sewed from purchased woven or knit fabric. Knitting mills engaged primarily in manufacturing outerwear are classified in Industry 2253, Knit Outerwear Mills.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date.

Table 1.—GENERAL STATISTICS FOR THE CHILDREN'S COAT AND SUIT INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2363)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	284	150	11,828	42,931	10,378	18,529	32,902	72,619	88,793	162,758	1,139
1958	370	210	12,798	42,435	10,967	19,488	31,527	68,205	95,330	163,821	783
1954[4]	407	214	14,399	44,980	12,849	22,692	35,598	72,003	100,982	173,754	574
1947[4 5]	473	(NA)	11,008	22,524	9,834	20,020	19,411	50,841	63,358	114,199	(NA)

(NA) Not available.

[1]See text regarding comparability of 1963 data with earlier years.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1947 and is not available by 4-digit industry for 1954.

[3]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

[5]Comparable data for 1939 are not available due to a change in the Standard Industrial Classification.

August 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished product inventories. For 1958, the finished products inventories adjustment would result in a decrease of $1 million or approximately 2 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Children's Coat and Suit Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Children's Coat and Suit Industry amounted to $163 million. Of this total, $14 million were products primary to other industries; and $25 million were receipts for miscellaneous activities. The industry shipments of primary products represent 91 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 95 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $148 million of children's coats and suits were shipped by all producers of these products. Of this total, $124 million, or 84 percent, were shipped by plants classified in Industry 2363, Children's Coats and Suits, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 85.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments shipping children's coats and suits also report annually on Census Form MA-23A, Annual Apparel Survey. The 1958 and 1963 data compiled from this survey are shown in table 3, together with the comparable totals reported in the census of manufactures.

In view of the differences between the originally tabulated totals obtained from the two reports, a review was undertaken of the data reported in each survey. Part of the difference was accounted for by the omission of a number of firms

from the annual apparel survey. The data obtained from these plants were added to the annual apparel survey information for 1963 and are now included in table 3. The remaining differences are the result of reporting variations for individual plants furnishing data in both surveys. These are being reviewed with the companies and any revisions that may be necessary to the current survey data will also be included in the 1964 report. Any revisions that may be necessary for the census of manufactures report will be included in the final report for this industry.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE CHILDREN'S COAT AND SUIT INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2363)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new	All employees, number	Value added by manufacture[1]

(X) Not applicable.
[1]See text regarding comparability of 1963 data with 1958.
[2]Detailed quantity data represent cuttings as reported on Census Annual Form MA-23A.
[3]1958 data were adjusted based on the census of manufactures.
[4]Production data for girls', children's, and infants' coats are reported in units on Census Annual Form MA-23A but have been converted to dozens on this table to be consistent with all other cuttings data shown on this table.
[5]Contract receipts are not included in the total shown for children's coats and suits. For 1963, contract receipts include all receipts for work on children's coats and suits for others on their material regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2363, Children's Coats and Suits.

1963 CENSUS OF MANUFACTURES

MC63(P)-23C-7

INDUSTRY SERIES

preliminary report

Children's outerwear, n. e. c.

SIC Code 2369

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Children's Outerwear, N.E.C., Industry shipped products valued at $417 million, an increase of 29 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 7 percent from 1958 to a total of 34 thousand employees in 1963. Value added by manufacture amounted to $187 million in 1963, an increase of 28 percent from 1958.

The Children's Outerwear, N.E.C., Industry includes establishments engaged primarily in the manufacture of girls', children's, and infants' outerwear, other than dresses, blouses, coats and suits, cut and sewed from purchased woven or knit fabric. Knitting mills primarily engaged in manufacturing outerwear are classified in Industry 2253, Knit Outerwear Mills.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification

Table 1.—GENERAL STATISTICS FOR THE CHILDREN'S OUTERWEAR, N.E.C., INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2369)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	623	359	34,160	106,897	30,377	55,913	84,206	186,794	232,096	417,070	2,779
1958	756	377	31,888	87,931	28,187	50,548	68,716	146,050	177,763	324,052	2,384
1954[4]	812	394	30,613	73,079	27,826	49,851	58,313	120,704	163,456	286,439	1,818
1947[4]	547	(NA)	14,781	35,084	13,291	(NA)	25,896	50,645	60,864	111,509	(NA)

(NA) Not available.

[1]See text regarding comparability of 1963 data with earlier years.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1947 and is not available by 4-digit industry for 1954.

[3]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

June 1965

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

(SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3A or in the industry's value of shipments and value added data shown in table 1.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Children's Outerwear, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Children's Outerwear, N.E.C., Industry amounted to $417 million. Of this total, $72 million were products primary to other industries; and $53 million were receipts for miscellaneous activities primarily for contract work done for others. The industry shipments of primary products represent 80 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 79 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $436 million of children's outerwear, n.e.c., were shipped by all producers of these products. Of this total, $292 million, or 67 percent, were shipped by plants classified in Industry 2369, Children's Outerwear, N.E.C., while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 63.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Manufacturers and jobbers of children's outerwear also report their shipments of products annually on Census Form MA-23A, Apparel. The 1963 product detail as collected on Census Form MA-23A is shown in table 3B.

The 1963 data as collected on Census Form MA-23A are also shown in summary in table 3A together with the comparable totals reported in the census of manufactures. The data vary as a result of reporting differences for individual plants furnishing data in both surveys.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

	As reported on Census Annual Form MA-23A	15,588	(NA)	(3)	(NA)
23690 49	Other woven fabric outerwear, including skirts, robes (terry cloth, quilted), headwear, toddlers' wash suits, neckwear, etc.:				
	As reported in the census of manufactures	2,117	58,688	1,930	(NA)
	As reported on Census Annual Form MA-23A	[4]2,143	(NA)	(3)	(NA)
	Girls', children's, and infants' outerwear made from knit fabric	(X)	131,612	(X)	95,762
22531 62 23690 72	Sweaters, jackets, jerseys, pull-overs, and sacques as reported in the census of manufactures	2,902	61,446	3,065	58,652
22531 62	Made in knitting mills	2,215	50,612	(NA)	51,625
23690 72	Made in cut-and-sew shops	687	10,834	(NA)	7,027
	As reported on Census Annual Form MA-23A	2,893	61,609	(3)	(NA)
22533 61 23690 79	Other knit outerwear, including play garments, creepers, rompers, and swimwear	(X)	70,166	(X)	37,110
22533 61	Made in knitting mills	(X)	29,498	(X)	18,091
23690 79	Made in cut-and-sew shops	(X)	40,668	(X)	19,019
23690 00	Girls', children's, and infants' outerwear, n.e.c., not specified by kind	(X)	15,647	(X)	14,305
23699 11	Receipts for contract work on children's outerwear, n.e.c., done for others on their materials	(X)	[5]46,271	(X)	[5]22,528

Note: Differences between the data collected in the census of manufactures and the Current Annual Survey MA-23A are discussed in the text. Quantity data collected on Form MA-23A represent cuttings rather than shipments. More detailed cuttings data are shown in table 3B.

n.e.c. Not elsewhere classified. (NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text). The quantity data reported for Census Annual Form MA-23A represent cuttings.

[2]Establishments primarily engaged in the manufacture of girls', children's, and infants' dresses, blouses, waists, and shirts are classified in Industry 2361, and coats and suits in Industry 2363.

[3]For 1958, the census product data were obtained from the Annual Apparel Survey MA-23A, and the summary value figures were collected in the census of manufactures.

[4]For 1963, cuttings include 554 thousand dozen of other woven fabric outerwear reported on Census Annual Form MA-23A which have not been published separately for prior years.

[5]Contract receipts are not included in the total shown for children's outerwear, n.e.c. For 1963, contract receipts include all receipts for work on children's outerwear, n.e.c., done for others on their materials regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2369, Children's Outerwear, N.E.C.

Table 3B.—QUANTITY OF CHILDREN'S OUTERWEAR, N.E.C., CUT BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(As reported annually on Census Form MA-23A, Apparel)

Product code	Product	Total cuttings (thousand dozens)	
		1963	1958
	Girls', children's, and infants' outerwear made from woven fabric:		
	Playsuits, sunsuits, wash suits, overalls, and coveralls, except slacks, dungarees, and jeans:		
23690 42	Girls', sub-teens, and teen-age play garments, (sizes 7-16)	3,265	3,076
23690 46	Children's play garments, (sizes 2-8)	4,773	3,420
23690 47	Toddlers' play garments, excluding wash suits (sizes 1-4)	1,480	842
23690 95	Toddlers' wash suits (sizes 1-4)	262	646
23690 48	Infants' creepers and rompers, including crawler-type overalls and coveralls (sizes 0-2)	1,226	1,587
	Slacks:

PUBLICATION PROGRAM 1963 CENSUSES OF MANUFACTURES AND MINERAL INDUSTRIES

Results of the 1963 Censuses of Manufactures and Mineral Industries will be issued initially in preliminary reports which will furnish summary data. These reports will be superseded by more detailed final reports. An outline of the publication program is shown below.

PRELIMINARY REPORTS

Summary Series

Manufactures (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. General statistics will also be presented for industries grouped according to market categories—durable and nondurable goods industries. A second report will provide general statistics without industry detail for regions, States, and large standard metropolitan statistical areas.

Mineral Industries (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. A second report will provide general statistics by 2-digit industry group for regions and States.

Industry Series

Manufactures (about 370 reports). Separate reports for virtually all of the 430 manufacturing industries will give industry totals for general statistics for the United States and for regions and States. A product table in each report will give the quantity and value of shipments of the products classified in the industry for the United States.

Mineral Industries (about 45 reports). Separate reports for industries or for groups of industries for all of the 50 mineral industries will present general statistics for the United States and for regions and States. A product table will give the quantity and value of shipments of the products classified in the industry for the United States and for regions and States.

Area Series

Manufactures (51 reports). A separate report for each State and the District of Columbia will present general statistics for the State and for the larger standard metropolitan statistical areas within the State by 2-digit and selected 3-digit industries, and for most individual counties on an "all manufacturing" basis.

Subject Series

Manufactures (2 reports). One report will provide data on the number of establishments, employment, and value added by manufacturing for each 4-digit industry according to employment size of the establishment in each industry. A separate report will provide statistics on inventories for each 4-digit industry on a national basis; State data on inventories will also be provided.

Mineral Industries (one report). This report will provide number of establishments, employment, and value added in mining for each 4-digit industry according to employment size of the establishment in each industry.

FINAL REPORTS

All preliminary reports will be superseded by comparable final reports. After separate final reports have been issued, they will be assembled and reissued in cloth bindings as follows:

Manufactures

Volume I, Summary Statistics

Volume II, Industry Statistics
Part 1, Major Groups 20-28
Part 2, Major Groups 29-39

Volume III, Area Statistics

Mineral Industries

Volume I, General Summary and Industry Statistics

Volume II, Area Statistics

1963 CENSUS OF MANUFACTURES IN PUERTO RICO

A separate 1963 Census of Manufactures was conducted jointly by the Puerto Rico Planning Board, Government of the Commonwealth of Puerto Rico, and the U.S. Bureau of the Census. A report of the findings will include statistics of manufacturing activity by industry and geographic area on value added by manufacture, employment, payrolls, inventories, capital expenditures, etc.

Additional Information and Order Forms

A more detailed description of the publication program of the 1963 censuses, including tentative publication dates, is available free of charge. Separate announcement and order forms for the preliminary reports of the censuses of manufactures and mineral industries are also available free of charge. Requests for order forms should specify which report series is desired. All requests should be addressed to the Publications Distribution Section, Bureau of the Census, Washington, D.C., 20233.

1963 CENSUS OF MANUFACTURES

MC63(P)-20I-2

INDUSTRY SERIES

preliminary report

Fabric dress and work gloves

SIC Code 2381

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Fabric Dress and Work Gloves Industry shipped products valued at $147 million, an increase of 24 percent over 1958 according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 9 percent from 1958 and 17 percent from 1962 to a total of 13 thousand employees in 1963. Value added by manufacture amounted to $63 million in 1963, an increase of 16 percent from 1958 and a decrease of 19 percent from 1962.

The Fabric Dress and Work Gloves Industry includes establishments engaged primarily in the manufacture of dress, semidress, and work gloves and mittens cut and sewed from purchased woven or knit fabric or these materials combined with leather. Knitting mills primarily engaged in manufacturing gloves and mittens are classified in Industry 2259; establishments primarily engaged in manufacturing leather gloves in Industry 3151; and those manufacturing rubber gloves in Industry 3069.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957

Table 1.—GENERAL STATISTICS FOR THE FABRIC DRESS AND WORK GLOVES INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2381)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]	Standard error of estimate (percent) for number of employees column[3]

(NA) Not available. (X) Not applicable.

[1] See text regarding comparability of 1963 data with earlier years.

[2] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figure shown in parentheses has standard error exceeding 15 percent. See the annual survey of manufactures volumes for further discussion of the sampling estimate.

[4] Data for Alaska and Hawaii are not included.

July 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, and 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3A or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in a decrease of 2.3 million dollars, or approximately 4 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Fabric Dress and Work Gloves Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Fabric Dress and Work Gloves Industry amounted to $147 million. Of this total, $12 million were products primary to other industries; and $17 million were receipts for miscellaneous activities including commission receipts for work done for others. The industry shipments of primary products represent 91 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 94 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, representing the value shipped by cut-and-sew ships in table 3A, indicates that $136 million of fabric dress and work gloves were shipped by all producers of these products. Of this total, $118 million, or 87 percent, were shipped by plants classified in Industry 2381, Fabric Dress and Work Gloves, while the remainder was shipped by plants classified in other industries.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments shipping Fabric Dress and Work Gloves also report their shipments of products annually on Census Form MA-23D, Gloves and Mittens. The 1963 data as previously published for this survey are shown in table 3A together with the comparable totals reported in the census of manufactures. The more detailed production data for 1958 and 1963 as reported on Census Annual Form MA-23D are shown in table 3B.

In view of the differences between these figures, a review was undertaken of the data reported in each survey. This analysis revealed that a significant number of producers were omitted from the annual survey. These plants are being added to the MA-23D survey for 1964 and revised detailed data for 1963 will be included in the 1964 report.

The remaining differences are the result of reporting differences for individual plants furnishing data in both surveys. These are being reviewed with the companies and any revisions that may be necessary to the current survey data will also be included in the 1964 report. Any revisions that may be necessary for the Census of Manufactures report will be included in the final report for this industry.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-230-3

INDUSTRY SERIES

preliminary report

Robes and dressing gowns

SIC Code 2384

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Robes and Dressing Gowns Industry shipped products valued at $177 million, an increase of 33 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 14 percent over 1958 to a total of 12 thousand employees in 1963. Value added by manufacture amounted to $70 million in 1963, an increase of 24 percent over 1958.

The Robes and Dressing Gowns Industry includes establishments engaged primarily in the manufacture of men's and women's robes and dressing gowns.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963 but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE ROBES AND DRESSING GOWNS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2384)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	274	147	12,160	38,515	10,730	19,523	29,988	69,829	107,204	176,630	788
1958	278	155	10,625	30,461	9,258	15,975	22,754	56,442	76,203	132,671	(5)
1954[4]	328	157	10,957	27,039	10,043	16,891	21,093	43,229	65,170	109,292	(5)
1947[4]	376	216	10,884	23,353	9,803	17,469	17,630	42,563	60,461	103,024	708
1939[4]	190	(NA)	(NA)	(NA)	5,774	(NA)	4,303	11,740	20,054	31,794	(NA)

(NA) Not available.

[1]See text regarding comparability of 1963 data with earlier years.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

[5]Less than $500 thousand.

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1954, 1958 and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in no significant change.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Robes and Dressing Gowns Industry consists not only of products described above as primary to the industry, but also of the value of secondary products, which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Robes and Dressing Gowns Industry amounted to $177 million. Of this total, $5 million were products primary to other industries; and $20 million were receipts for miscellaneous activities. The industry shipments of primary products represent 97 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 93 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $161 million of Robes and Dressing Gowns were shipped by all producers of these products. Of this total, $152 million, or 94 percent, were shipped by plants classified in Industry 2384, Robes and Dressing Gowns, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 96.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which

show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U. S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

23849 93	Receipts for contract work on robes and dressing gowns done for others on their materials	(X)	[4]15,719	(X)	[4]13,028

(NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report "Value of Shipments" in 1963 and "Value of Production" in 1958. This change does not significantly affect the comparability of the data for the two years. (See text.)

[2]Data not collected by type of fabric in 1958.

[3]For 1963 and 1958, data were collected for robes and dressing gowns separately from breakfast coats, brunch coats, and housecoats. A large number of producers of these two categories of garments were not able to make clear distinctions between them. Therefore, data have been combined for both years.

[4]Contract receipts are not included in the total shown for robes and dressing gowns. For 1963, contract receipts include all receipts for work on robes and dressing gowns done for others on their materials regardless of the industry classification of the establishments. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2384, Robes and Dressing Gowns.

1963 CENSUS OF MANUFACTURES

MC63(P)-24.4

INDUSTRY SERIES

preliminary report

Waterproof outergarments

SIC Code 2385

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Waterproof Outergarments Industry shipped products valued at $229 million, an increase of 57 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 23 percent from 1958 to a total of 16 thousand employees in 1963. Value added by manufacture amounted to $108 million in 1963, an increase of 48 percent from 1958.

The Waterproof Outergarments Industry includes establishments engaged primarily in the manufacture of raincoats from purchased rubberized fabrics and other waterproof outergarments made from such material as pliofilm and cellophane. Establishments primarily engaged in manufacturing oiled fabric work garments are classified in Industry 2328, Work Clothing, and those manufacturing vulcanized rubber garments and garments made from rubberized fabrics produced in the same establishment are classified in Industry 3069, Rubber Products, N.E.C.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing

(NA) Not available.

[1]See text regarding comparability of 1963 data with earlier years.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

June 1965

establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not signigicantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments and value added by manufacture shown in table 1.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Waterproof Outergarments Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Waterproof Outergarments Industry amounted to $229 million. Of this total, $16 million were products primary to other industries; and $29 million were receipts for miscellaneous activities primarily for contract work done for others. The industry shipments of primary products represent 92 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 90 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $198 million of waterproof outergarments were shipped by all producers of these products. Of this total, $184 million, or 93 percent, were shipped by plants classified in Industry 2385, Waterproof Outergarments, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 90 percent.

COMPARISON OF CENSUS AND CURRENT SURVEY DATA

Establishments shipping raincoats and raincapes also report annually on Census Form MA-23A, Annual Apparel Survey. The 1963 data compiled from this survey are shown in table 3, together with the comparable totals reported in the census of manufactures.

In view of the differences in the originally tabulated totals between the two reports, a review was undertaken of the data reported in each survey. The greatest part of the difference was accounted for by the omission of a number of firms producing women's raincoats from the Annual Apparel Survey. The data obtained from these plants were added to the Annual Apparel Survey information for 1963 and are now included in table 3. This information is, therefore, not completely comparable to the previously published 1962 data issued in Current Industrial Reports Series M23A, Apparel. Revisions to the 1962 data will be shown in the final 1963 publication of this series which will be issued in the next few months.

The minor variations in the two sets of data are caused by small reporting differences for a number of plants reporting in both surveys.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE WATERPROOF OUTERGARMENTS INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2385)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture[1]

(NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text).

[2]The quantity data for 1958 are based on the census of manufactures as revised for the Annual Apparel Survey Supplement 1962, Raincoats and Raincapes, Series M23H(62)-3. The total quantity includes 147 thousand dozen raincoats and raincapes not specified by kind which are not included in the detail for men's, women's or children's raincoats.

[3]The detailed quantity data represent cuttings as reported on Census Annual Form MA-23A. The comparability of the census of manufactures and current survey data is discussed in the text.

[4]For 1958, collected as plastic and rubberized.

[5]Included with men's and boys' unlined or lightweight lined, other uncoated fabrics, product code 2385138, in order to avoid disclosing operations of individual companies.

[6]For 1958, collected as cotton gabardine, twill, and poplin (not coated).

[7]For 1958, includes women's, misses', and children's aprons, smocks, and bibs, plastic and rubberized, valued at $2,607 thousand, and all other waterproof outergarments, including dress shields, bathing caps, etc. (except oil and rubber) valued at $8,363 thousand.

[8]Contract receipts are not included in the total shown for waterproof outergarments. For 1963, contract receipts include all receipts for work on waterproof outergarments done for others on their materials, regardless of the industry classification of the establishments. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2385, Waterproof Outergarments.

1963 CENSUS OF MANUFACTURES

MC63(P)-23D-5

INDUSTRY SERIES

preliminary report

Leather and sheeplined clothing

SIC Code 2386

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Leather and Sheeplined Clothing Industry shipped products valued at $56 million, a decrease of 15 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 28 percent from 1958 to a total of 3 thousand employees in 1963. Value added by manufacture amounted to $23 million in 1963, a decrease of 17 percent from 1958.

The Leather and Sheeplined Clothing Industry includes establishments engaged primarily in the manufacture of leather and sheeplined garments. Establishments primarily engaged in manufacturing leather gloves and mittens are classified in Industry 3151, Leather Gloves, and fur garments in Industry 2371, Fur Goods.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

Table 1.--GENERAL STATISTICS FOR THE LEATHER AND SHEEPLINED CLOTHING INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2386)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	110	49	3,322	12,684	2,988	5,714	10,378	23,181	33,172	55,982	312

1939[4]	97	(NA)	5,355	5,878	4,672	(NA)	4,578	8,376	13,766	22,142	(NA)

(NA) Not available.

[1]See text regarding comparability of 1963 data with earlier years.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

and Hawaii are included for 1958 and 1963 but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958 and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments or value added data shown in table 1.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Leather and Sheeplined Clothing Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Leather and Sheeplined Clothing Industry amounted to $56 million. Of this total, $9 million were products primary to other industries; and $4 million were receipts for miscellaneous activities. The industry shipments of primary products represent 94 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 94 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $58 million of leather and sheeplined clothing were shipped by all producers of these products. Of this total, $49 million, or 85 percent, were shipped by plants classified in Industry 2386, Leather and Sheeplined Clothing, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 91.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into

account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.--GENERAL STATISTICS FOR THE LEATHER AND SHEEPLINED CLOTHING INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2386)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new	All employees, number	Value added by manufacture[1]

1963 CENSUS OF MANUFACTURES

MC63(P)-23D-6

INDUSTRY SERIES

preliminary report

Apparel belts SIC Code 2387

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Apparel Belts Industry shipped products valued at $101 million, an increase of 2 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 8 percent from 1958 to a total of 9 thousand employees in 1963. Value added by manufacture amounted to $58 million in 1963, an increase of 7 percent from 1958.

The Apparel Belts Industry includes establishments engaged primarily in the manufacture of men's and women's apparel belts, regardless of material.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from

Table 1.--GENERAL STATISTICS FOR THE APPAREL BELTS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958 and 1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments shown in table 1. However, it does have a somewhat greater effect on the comparability of the 1963 value added data to the value added information published for prior years since an adjustment in prior years was not made for changes in finished products inventories. For 1958, the finished products inventories adjustment would result in a decrease of 1.3 million dollars, or approximately 2 percent.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Apparel Belts Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries) and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Apparel Belts Industry amounted to $101 million. Of this total, $5 million were products primary to other industries; and $7 million were receipts for miscellaneous activities. The industry shipments of primary products represented 89 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $89 million of apparel belts were shipped by all producers of these products. Of this total, $84 million, or 94 percent, were shipped by plants classified in the Industry 2387, Apparel Belts while the remainder were shipped by plants classified in other industries. The comparable ratio for 1958 was 95 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports

will be issued for other industries during the coming months. A series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-23D.7

INDUSTRY SERIES

preliminary report

Apparel, n.e.c. SIC Code 2389

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Apparel, N.E.C., Industry shipped products valued at $95 million, an increase of 1 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 7 percent from 1958 to a total of 7 thousand employees in 1963. Value added by manufacture amounted to $42 million in 1963, an increase of 1 percent from 1958.

The Apparel, N.E.C., Industry includes establishments engaged primarily in the manufacture of suspenders, garters, handkerchiefs, and other apparel, not elsewhere classified, such as academic caps and gowns, vestments, and theatrical costumes.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.--GENERAL STATISTICS FOR THE APPAREL, N.E.C., INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2389)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments[1]	Capital expenditures, new[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	273	104	6,984	24,774	5,981	10,537	18,646	41,519	51,234	95,430	385
1958	309	93	7,525	23,087	6,135	11,012	16,168	41,262	53,250	94,904	517
1954[4]	286	95	7,948	20,796	6,934	12,249	15,054	35,909	48,476	84,389	(NA)

1939[4]	193	(NA)	(NA)	(NA)	8,389	(NA)	6,122	16,365	24,525	40,890	(NA)

(NA) Not available.

[1]See text regarding comparability of 1963 data with earlier years.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

June 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 3 or in the industry's value of shipments and value added data shown in table 1.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Apparel, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Apparel, N.E.C., Industry amounted to $95 million. Of this total, $10 million were products primary to other industries; and $6 million were receipts for miscellaneous activities. The industry shipments of primary products represent 96 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 91 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $102 million of apparel, n.e.c., were shipped by all producers of these products. Of this total, $85 million, or 84 percent, were shipped by plants classified in Industry 2389, Apparel, N.E.C., while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was also 84.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports

will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.--GENERAL STATISTICS FOR THE APPAREL, N.E.C., INDUSTRY, BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2389)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture[1]	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)		($1,000)

23890 91	Academic caps and gowns, and costumes, including theatrical	(X)	15,551	(X)	33,854
23890 98	All other apparel, n.e.c., including ecclesiastical vestments, special garments for fraternal orders, etc	(X)	12,148		
23890 00	Apparel, n.e.c., not specified by kind	(X)	16,010		
23899 93	Receipts for contract work on apparel, n.e.c., done for others on their materials	(X)	[5]2,076	(X)	[5]4,050

n.e.c. Not elsewhere classified. (NA) Not available. (X) Not applicable.

[1]Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in 1958. This change does not significantly affect the comparability of the data for the two years (see text).

[2]Does not include apparel for which data are being published in separate reports such as dresses, suits, coats, shirts, underwear, nightwear, etc.

[3]For 1958, the value of production of suspenders was $3,921 thousand. The value of production of garters, hose supporters, and arm bands was $6,766 thousand. Data for these products were not collected separately for 1963 and are included in product code 2389031.

[4]For 1963, quantity data for garter belts were also reported on Census Form MA-23J, Annual Survey of Brassieres, Corsets, and Allied Garments Shipments. The data vary as a result of reporting differences for individual plants furnishing data in both surveys. Since this survey was begun in 1960, comparable data from the current survey are not available for 1958.

[5]Contract receipts are not included in the total shown for apparel, n.e.c. For 1963, contract receipts include all receipts for work on apparel, n.e.c., done for others on their materials, regardless of the industry classification of the establishment. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in Industry 2389, Apparel, N.E.C.

U.S. DEPARTMENT OF COMMERCE

1963 CENSUS OF MANUFACTURES

MC63(P)-23E.1

INDUSTRY SERIES

preliminary report

Curtains and draperies SIC Code 2391

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Curtains and Draperies Industry shipped products valued at $311 million, an increase of 43 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 34 percent from 1958 to a total of 22 thousand employees in 1963. Value added by manufacture amounted to $133 million in 1963, an increase of 52 percent from 1958.

The Curtains and Draperies Industry includes establishments engaged primarily in the manufacture of curtains and draperies from purchased materials.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963 but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE CURTAINS AND DRAPERIES INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2391)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[2]
	Total[1]	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[3]	1,112	254	21,968	75,138	19,076	35,904	56,715	132,712	181,460	311,048	2,926
1958	783	206	16,366	48,403	14,141	26,814	36,923	87,273	130,865	217,029	1,861
1954[4]	716	182	13,988	36,899	12,350	22,976	27,304	63,816	117,359	180,180	1,208
1947[4]	397	109	7,982	17,081	6,928	(NA)	11,702	34,909	74,731	109,640	748
1939[4]	327	(NA)	(NA)	(NA)	7,691	(NA)	5,310	13,653	32,825	46,478	(NA)

(NA) Not available.

[1]A review of the reports for 1963 indicates that there were approximately 300 small establishments included in this industry that described their activities as custom drapery producers, interior decorator workrooms, etc. Approximately half of these establishments were classified as nonmanufacturers in the 1958 census.

[2]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[3]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[4]Data for Alaska and Hawaii are not included.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Curtains and Draperies Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Curtains and Draperies Industry amounted to $311 million. Of this total, $14 million were products primary to other industries; and $35 million were receipts for miscellaneous activities. The industry shipments of primary products represent 95 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 96 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $275 million of curtains and draperies were shipped by all producers of these products. Of this total, $263 million, or 95 percent, were shipped by plants classified in Industry 2391, Curtains and Draperies, while the remainder was shipped by plants classified in other industries. The comparable ratio for 1958 was 92.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-23E-2

INDUSTRY SERIES

preliminary report

Housefurnishings, n.e.c.

SIC Code 2392

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Housefurnishings, N.E.C., Industry shipped products valued at $699 million, an increase of 13 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 5 percent from 1958 to a total of 39 thousand employees in 1963. Value added by manufacture amounted to $269 million in 1963, an increase of 23 percent from 1958.

The Housefurnishings, N.E.C., Industry includes establishments engaged primarily in the manufacture of housefurnishings from purchased materials. Establishments engaged in the manufacture of curtains and draperies are classified in Industry 2391, Curtains and Draperies.

Establishments primarily producing housefurnishings from fabrics woven at the same establishment are classified in the appropriate weaving industry, generally 2211, Cotton Weaving Mills.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report

Table 1.--GENERAL STATISTICS FOR THE HOUSEFURNISHINGS, N.E.C., INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2392)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	1,208	406	38,723	139,198	32,546	62,361	100,259	269,405	431,171	698,977	12,463

1939[3]	584	(NA)	(NA)	(NA)	20,096	(NA)	13,219	34,219	59,758	93,977	(NA)

(NA) Not available.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

June 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963 but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Housefurnishings, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The industry shipments of primary products represent 87 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 88 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $1,114 million of housefurnishings, n.e.c., were shipped by all producers of these products. Of this total, $567 million, or 51 percent, were shipped by plants classified in Industry 2392, Housefurnishings, N.E.C., while the remainder was shipped by plants classified in other industries.

COMPARABILITY OF CENSUS AND CURRENT SURVEY DATA

The Census Bureau also conducts a number of current surveys of textile mills. The data relating to the product information shown in table 3 are published in the following Current Industrial Reports Series:

M22L - Tufted Textile Products
M23X - Sheets, Pillowcases, and Towels

The tufted bedspreads and bed sets data as published in Series M22L are directly comparable to the information collected in the census of manufactures.

The differences in the two sets of data are primarily due to reporting differences for individual plants furnishing data in both surveys. The census data are believed to more adequately reflect the shipments aggregate.

The sheets, pillowcases, and towels data are also comparable to the information previously published in Series M23X. However, the 1958 data as published in the census were revised when issued in the M23X report. In the 1958 Census, separate reports were received for each manufacturing plant. In some cases, a manufacturing plant produced sheets, pillowcases, or towels on commission for another office of the company or for another company. In such cases, the manufacturing plant reported the quantity of products produced and commission receipts for work performed. Where the other office

for whom the products were made did not perform any manufacturing operations, the establishment, such as a selling office, was excluded from the census of manufactures. Consequently, the 1958 data representing shipments from manufacturing plants understated the shipments data for individual products.

In order to obtain 1958 data comparable to that shown for later years, the 1958 data were revised for plants producing products for the account of nonmanufacturing establishments.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

[1]Data are for cotton bedspreads and bed sets, except tufted.

[2]See text "Comparability of Census and Current Survey Data."

[3]1958 data for tufted bedspreads are from the Current Industrial Reports Series M22L, Tufted Textile Products.

[4]Quantity estimated or partially estimated based on the unit-value relationship reported for other products.

[5]Includes shipments of bedspreads, bed sets, sheets, pillowcases, towels, and other household furnishings not specified by kind.

PUBLICATION PROGRAM 1963 CENSUSES OF MANUFACTURES AND MINERAL INDUSTRIES

Results of the 1963 Censuses of Manufactures and Mineral Industries will be issued initially in preliminary reports which will furnish summary data. These reports will be superseded by more detailed final reports. An outline of the publication program is shown below.

PRELIMINARY REPORTS

Summary Series

Manufactures (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. General statistics will also be presented for industries grouped according to market categories—durable and nondurable goods industries. A second report will provide general statistics without industry detail for regions, States, and large standard metropolitan statistical areas.

Mineral Industries (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. A second report will provide general statistics by 2-digit industry group for regions and States.

Industry Series

Manufactures (about 370 reports). Separate reports for virtually all of the 430 manufacturing industries will give industry totals for general statistics for the United States and for regions and States. A product table in each report will give the quantity and value of shipments of the products classified in the industry for the United States.

Mineral Industries (about 45 reports). Separate reports for industries or for groups of industries for all of the 50 mineral industries will present general statistics for the United States and for regions and States. A product table will give the quantity and value of shipments of the products classified in the industry for the United States and for regions and States.

Area Series

Manufactures (51 reports). A separate report for each State and the District of Columbia will present general statistics for the State and for the larger standard metropolitan statistical areas within the State by 2-digit and selected 3-digit industries, and for most individual counties on an "all manufacturing" basis.

Subject Series

Manufactures (2 reports). One report will provide data on the number of establishments, employment, and value added by manufacturing for each 4-digit industry according to employment size of the establishment in each industry. A separate report will provide statistics on inventories for each 4-digit industry on a national basis; State data on inventories will also be provided.

Mineral Industries (one report). This report will provide number of establishments, employment, and value added in mining for each 4-digit industry according to employment size of the establishment in each industry.

FINAL REPORTS

All preliminary reports will be superseded by comparable final reports. After separate final reports have been issued, they will be assembled and reissued in cloth bindings as follows:

Manufactures

Volume I, Summary Statistics

Volume II, Industry Statistics
Part 1, Major Groups 20-28
Part 2, Major Groups 29-39

Volume III, Area Statistics

Mineral Industries

Volume I, General Summary and Industry Statistics

Volume II, Area Statistics

1963 CENSUS OF MANUFACTURES IN PUERTO RICO

A separate 1963 Census of Manufactures was conducted jointly by the Puerto Rico Planning Board, Government of the Commonwealth of Puerto Rico, and the U.S. Bureau of the Census. A report of the findings will include statistics of manufacturing activity by industry and geographic area on value added by manufacture, employment, payrolls, inventories, capital expenditures, etc.

Additional Information and Order Forms

A more detailed description of the publication program of the 1963 censuses, including tentative publication dates, is available free of charge. Separate announcement and order forms for the preliminary reports of the censuses of manufactures and mineral industries are also available free of charge. Requests for order forms should specify which report series is desired. All requests should be addressed to the Publications Distribution Section, Bureau of the Census, Washington, D.C., 20233.

1963 CENSUS OF MANUFACTURES

MC63(P)-23E-3

INDUSTRY SERIES

preliminary report

Textile bags SIC Code 2393

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Textile Bags Industry shipped products valued at $203 million, a decrease of 1 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 17 percent from 1958 to a total of 7.6 thousand employees in 1963. Value added by manufacture amounted to $57 million in 1963, an increase of 11 percent from 1958.

The Textile Bags Industry includes establishments engaged primarily in the manufacture of cotton, burlap, and other textile bags from purchased fabric.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963.

Table 1.--GENERAL STATISTICS FOR THE TEXTILE BAGS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2393)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	185	89	7,561	29,324	6,451	12,478	21,507	57,096	146,786	203,245	1,900
1958[2]	237	101	9,114	30,047	7,557	14,673	21,942	51,638	153,800	204,379	1,512
1954[3]	268	121	12,109	35,120	9,897	18,748	24,329	55,114	198,980	254,260	3,941
1947[3]	232	(NA)	13,850	28,279	12,129	(NA)	20,984	66,320	289,661	355,981	3,918
1939[3]	216	(NA)	13,903	14,531	11,991	(NA)	10,003	27,895	93,807	121,702	(NA)

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Textile Bags Industry consists not only of products described above as primary to the industry but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Textile Bags Industry amounted to $203 million. Of this total, $28 million were products primary to other industries; and $24 million were receipts for miscellaneous activities. The industry shipments of primary products represented 84 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 83 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $182 million of Textile Bags were shipped by all producers of these products. Of this total, $151 million, or 83 percent, were shipped by plants classified in Industry 2393, Textile Bags, while the remainder was shipped by plants classified in other industries. The comparable ratio for 1958 was 85.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-23E-4

INDUSTRY SERIES

preliminary report

Canvas products

SIC Code 2394

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Canvas Products Industry shipped products valued at $160 million, an increase of 22 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 10 percent from 1958 to a total of 10.9 thousand employees in 1963. Value added by manufacture amounted to $70 million in 1963, an increase of 30 percent from 1958.

The Canvas Products Industry includes establishments engaged primarily in the manufacture of awnings, tents, and other canvas products from purchased canvas.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963 but are not included for 1954 and 1947.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing

Table 1.—GENERAL STATISTICS FOR THE CANVAS PRODUCTS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2394)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	874	122	10,901	43,111	8,742	17,120	29,597	69,836	89,296	159,886	2,071

1947[3]	903	(NA)	10,603	24,751	8,669	(NA)	17,491	41,424	49,684	91,108	1,399

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

April 1965

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Canvas Products Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Canvas Products Industry amounted to $160 million. Of this total, $8 million were products primary to other industries; and $14 million were receipts for miscellaneous activities. The industry shipments of primary products represented 94 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 90 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $154 million of canvas products were shipped by all producers of these products. Of this total, $137 million, or 89 percent, were shipped by plants classified in Industry 2394, Canvas Products, while the remainder was shipped by plants classified in other industries. The comparable ratio for 1958 was 90.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of

Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

INDUSTRY SERIES

Pleating stitching and apparel findings

SIC Codes 2395 and 2396

preliminary report

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Pleating and Stitching Industry shipped products valued at $148 million, and manufacturers in the Apparel Findings Industry had shipments of $567 million according to preliminary results obtained from the 1963 census. For the combined industries, this represented an increase of 66 percent since 1958. Average employment for these two industries showed an increase of 23 percent from 1958 to 40.6 thousand employees in 1963. Value added by manufacture amounted to $320 million in 1963, an increase of 80 percent from 1958.

The Pleating and Stitching Industry includes establishments engaged primarily in pleating, decorative and novelty stitching, and tucking for the trade. Establishments primarily engaged in performing similar services for individuals are classified in service industries.

The Apparel Findings Industry includes establishments engaged primarily in manufacturing apparel findings, trimmings, and related products.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963 but are not included for 1954 and earlier years.

June 1965

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period. The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963, value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in each of the industries mentioned consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Pleating and Stitching Industry amounted to $148 million. Of this total, $9 million were products primary to other industries; and $12 million were receipts for miscellaneous activities. The industry shipments of primary products represent 93 percent of the total manufactured product shipments, primary and secondary.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $129 million of pleating, stitching, etc., was done by all producers of these products. Of this total, $127 million, or 98 percent, was done by plants classified in Industry 2395, Pleating and Stitching, while the remainder was done by plants classified in other industries.

The total value of shipments and other receipts of establishments classified in the Apparel Findings Industry amounted to $567 million. Of this total, $13 million were products primary to other industries; and $19 million were receipts for miscellaneous activities. The industry shipments of primary products represent 94 percent of the total manufactured product shipments, primary and secondary.

The total value of primary products of the industry shipped by all producers, appearing in table 3, indicates that $550 million of apparel findings and related products were shipped by all producers of these products. Of this total, $535 million, or 97 percent, were shipped by plants classified in Industry 2396, Apparel Findings, while the remainder was shipped by plants classified in other industries.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for Industries 2395 and 2396 will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

	1963	708	207	24,397	122,132	20,692	39,831	93,944	227,115	340,492	567,104	8,239
2395 2396	Pleating, stitching, and apparel findings:											
	1963[2]	2,008	449	40,590	176,978	35,232	67,500	139,779	319,580	394,529	715,225	10,930
	1958	2,189	414	32,986	116,993	27,740	50,854	89,548	177,784	247,730	431,890	5,769
	1954[3]	2,462	507	39,392	113,157	34,983	62,322	87,542	180,974	213,126	392,098	9,243
	1947[3]	(NA)	(NA)	36,903	81,475	33,485	(NA)	65,926	148,826	123,899	272,725	3,199
	1939[3]	1,271	(NA)	(NA)	(NA)	19,942	(NA)	17,202	39,136	36,706	75,842	(NA)

Note: The total shown for 1963 and the data for 1958 and prior years are for the combined industries 2395 and 2396. These industries were separately defined for the 1958 Census of Manufactures. However, a large number of establishments, accounting for approximately ten percent of the 1958 shipments, did not report sufficient information to properly classify them into one of the two industries. Therefore, for that Census, the data for the two industries were combined into Census Industry 2398.

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For these industries, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in these or associated industries or areas, or (b) because these industries were of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on these industries.)
[1]Less than $500 thousand.

Table 3.—VALUE OF STITCHINGS, TRIMMINGS, FINDINGS, AND RELATED PRODUCTS SHIPPED BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Includes value of these products reported not only by establishments classified in the Pleating, Stitching, and Apparel Findings Industries but also by establishments making these items as "secondary" products in other industries. See text under "Value of Shipments")

Product code	Product	Value of shipments including interplant transfers ($1,000)	
		1963	1958
2395- -- 2396- --	Stitchings, trimmings, findings, and related products	679,200	400,852
2395- --	Pleating, decorative and novelty stitching, and tucking for the trade, total	128,992	(NA)
23951 --	Embroideries (except Schiffli-machine products), stamped art goods, and art needlework, total	43,815	[1]44,696
23951 12	Embroideries (except Schiffli-machine products)	23,457	[1]37,197
23951 31	Stamped art goods for embroidering and punching	6,543	7,499
23951 00	Embroideries and stamped art goods, not specified by kind	13,815	([2])
23959 --	Commission receipts for embroidering (except Schiffli-machine) tucking, pleating, etc., for the trade, total	53,698	[1]47,414
23959 11	Commission receipts for embroidering (except Schiffli-machine) on materials owned by others	23,227	[1]17,198
23959 31	Commission receipts for contract tucking, pleating, hemstitching, and button holing for the trade	29,281	30,216
23959 00	Commission receipts for embroidering, tucking, stitching, etc., not specified by kind	1,190	-
23950 00	Embroideries, stamped art goods, art needlework, and commission receipts for such work, not specified by kind	31,479	([2])
2396- --	Apparel findings and related products, total	550,208	(NA)
23961 --	Men's, and boys' suit and coat findings, hatters' fur and other hat and cap material, total	43,849	49,422
23961 11	Men's and boys' coat, suit and trouser findings	33,205	35,319
23961 31	Hat bands, hat linings, tip printing and stamping, sweats, cap fronts, etc., made for sale as such	7,032	7,440
23961 51	Hatters' fur cut or blown for sale as such[3]	3,612	6,663
23962 --	Automobile and furniture trimmings, total	359,794	160,564
23962 16	Automobile	359,376	159,099
23962 17	Furniture	418	1,465
23963 --	Other trimmings and findings, total	122,314	(NA)
	Trimmings, except automobile and furniture:		
23963 11	Women's and children's apparel findings	37,771	27,433
23963 13	Other	20,568	10,923
23963 33	Bias binding for the apparel trade and the notion trade (except fused or sealed edge)	15,841	17,565
	Ribbons, fused or sealed edge (not woven with fast edges):		
23963 41	Gift tyings	6,315	(NA)
23963 49	All other	17,488	(NA)
23963 99	All other trimmings and findings, not specified by kind	24,331	([2])
23960 00	Apparel findings and related products, not specified by kind	24,251	[2]42,835

- Represents zero. (NA) Not available.

[1]For 1958, embroideries, code 2395112, include $10,712 thousand which was not differentiated between the value of embroideries shipped and commission receipts for embroidering on materials owned by others.

[2]For 1958, embroideries, stamped art goods, art needlework, trimmings and findings, not specified by kind, are included with apparel findings and related products, not specified by kind (code 2396000).

[3]In 1963, shipments of hatters' fur, cut or blown for sale as such, amounted to 1,379 thousand pounds at a value of $3,612 million; whereas shipments in 1958 amounted to 1,744 thousand pounds at a value of $6,663 million.

PUBLICATION PROGRAM 1963 CENSUSES OF MANUFACTURES AND MINERAL INDUSTRIES

Results of the 1963 Censuses of Manufactures and Mineral Industries will be issued initially in preliminary reports which will furnish summary data. These reports will be superseded by more detailed final reports. An outline of the publication program is shown below.

PRELIMINARY REPORTS

Summary Series

Manufactures (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. General statistics will also be presented for industries grouped according to market categories—durable and nondurable goods industries. A second report will provide general statistics without industry detail for regions, States, and large standard metropolitan statistical areas.

Mineral Industries (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. A second report will provide general statistics by 2-digit industry group for regions and States.

Industry Series

Manufactures (about 370 reports). Separate reports for virtually all of the 430 manufacturing industries will give industry totals for general statistics for the United States and for regions and States. A product table in each report will give the quantity and value of shipments of the products classified in the industry for the United States.

Mineral Industries (about 45 reports). Separate reports for industries or for groups of industries for all of the 50 mineral industries will present general statistics for the United States and for regions and States. A product table will give the quantity and value of shipments of the products classified in the industry for the United States and for regions and States.

Area Series

Manufactures (51 reports). A separate report for each State and the District of Columbia will present general statistics for the State and for the larger standard metropolitan statistical areas within the State by 2-digit and selected 3-digit industries, and for most individual counties on an "all manufacturing" basis.

Subject Series

Manufactures (2 reports). One report will provide data on the number of establishments, employment, and value added by manufacturing for each 4-digit industry according to employment size of the establishment in each industry. A separate report will provide statistics on inventories for each 4-digit industry on a national basis; State data on inventories will also be provided.

Mineral Industries (one report). This report will provide number of establishments, employment, and value added in mining for each 4-digit industry according to employment size of the establishment in each industry.

FINAL REPORTS

All preliminary reports will be superseded by comparable final reports. After separate final reports have been issued, they will be assembled and reissued in cloth bindings as follows:

Manufactures

Volume I, Summary Statistics

Volume II, Industry Statistics
Part 1, Major Groups 20-28
Part 2, Major Groups 29-39

Volume III, Area Statistics

Mineral Industries

Volume I, General Summary and Industry Statistics

Volume II, Area Statistics

1963 CENSUS OF MANUFACTURES IN PUERTO RICO

A separate 1963 Census of Manufactures was conducted jointly by the Puerto Rico Planning Board, Government of the Commonwealth of Puerto Rico, and the U.S. Bureau of the Census. A report of the findings will include statistics of manufacturing activity by industry and geographic area on value added by manufacture, employment, payrolls, inventories, capital expenditures, etc.

Additional Information and Order Forms

A more detailed description of the publication program of the 1963 censuses, including tentative publication dates, is available free of charge. Separate announcement and order forms for the preliminary reports of the censuses of manufactures and mineral industries are also available free of charge. Requests for order forms should specify which report series is desired. All requests should be addressed to the Publications Distribution Section, Bureau of the Census, Washington, D.C., 20233.

INDUSTRY SERIES

preliminary report

Textile products, n. e. c. SIC Code 2399

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Textile Products, N.E.C., Industry shipped products valued at $333 million, an increase of 35 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 19 percent from 1958 to a total of 21 thousand employees in 1963. Value added by manufacture amounted to $142 million in 1963, an increase of 44 percent from 1958.

The Textile Products, N.E.C., Industry includes establishments engaged primarily in the manufacture of fabricated textile products, not elsewhere classified. Establishments primarily producing apparel, curtains, draperies, house-furnishings, bags and canvas products are classified in other industries in Major Group 23.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963.

Table 1.—GENERAL STATISTICS FOR THE TEXTILE PRODUCTS, N.E.C., INDUSTRY IN THE UNITED STATES: 1963 AND 1958

(SIC code 2399)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture ($1,000)	Cost of materials ($1,000)	Value of shipments ($1,000)	Capital expenditures, new[1] ($1,000)
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)				
1963[2]	1,015	248	21,384	77,753	17,832	33,982	55,856	141,675	189,406	332,621	4,541
1958[3]	919	212	17,930	57,786	14,681	27,667	41,272	98,087	146,500	247,113	2,781

[1]Includes expenditures for plants under construction but not in operation.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1963 and 1958 are not comparable with those for earlier years.

June 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

For 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958 and 1963, value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Textile Products, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The industry shipments of primary products represent 84 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 88 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $341 million of fabricated textile products, n.e.c., were shipped by all producers of these products. Of this total, $261 million, or 76 percent, were shipped by plants classified in Industry 2399, Textile Products, N.E.C., while the remainder was shipped by plants classified in other industries. The 1958 ratio was 75.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

INDUSTRY SERIES

preliminary report

Sawmills and planing mills

SIC Code 2421

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Sawmills and Planing Mills shipped products valued at $3,138 million, an increase of 8 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 17 percent from 1958 and 2 percent from 1962 to a total of 205.6 thousand employees in 1963. Value added by manufacture amounted to $1,360 million in 1963, an increase of 14 percent over 1958 and 3 percent over 1962.

Sawmills and Planing Mills include establishments engaged primarily in sawing rough lumber and timber from logs and bolts, or resawing cants and flitches into lumber, including box lumber and softwood cut stock. This industry includes planing mills combined with sawmills and separately operated planing mills which are engaged primarily in producing surfaced lumber and standard workings or patterns of lumber. Establishments primarily engaged in sawing lath, railroad ties and in producing tobacco hogshead stock and snow fence lath are also included in this industry.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report

Table 1.—GENERAL STATISTICS FOR SAWMILLS AND PLANING MILLS IN THE UNITED STATES FOR SELECTED YEARS

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii included for 1963 only.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Sawmills and Planing Mills consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Sawmills and Planing Mills amounted to $3,138 million. Of this total, $340 million were products primary to other industries; and $136 million were receipts for miscellaneous activities. The industry shipments of primary products represent 89 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $2,807 million of sawmill and planing mill products were shipped by all producers of these products. Of this total, $2,662 million, or 95 percent, were shipped by plants classified in Industry 2421, Sawmills and Planing Mills, while the remainder was shipped by plants classified in other industries. The comparable 1958 ratio was 97 percent.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary

products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-24A-3

INDUSTRY SERIES

preliminary report

Hardwood dimension and flooring

SIC Code 2426

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Hardwood Dimension and Flooring Industry shipped products valued at $352 million, an increase of 35 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 14 percent over 1958 and 9 percent over 1962 to a total of 28.7 thousand employees in 1963. Value added by manufacture amounted to $157 million in 1963, an increase of 42 percent over 1958 and 19 percent over 1962.

The Hardwood Dimension and Flooring Industry includes establishments engaged primarily in the manufacture of hardwood dimension lumber and workings therefrom; and other hardwood dimension, semi-fabricated or ready for assembly; and hardwood flooring.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.--GENERAL STATISTICS FOR THE HARDWOOD DIMENSION AND FLOORING INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2426)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]

(NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further explanation of the sampling estimate.

[3] Data for 1963 are not directly comparable with totals shown for previous years. The totals for 1958 through 1962 do not include an undetermined amount for small establishments incorrectly classified in Industry 2421, Sawmills and Planing Mills.

BUREAU OF THE CENSUS, Richard M. Scammon, Director

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Hardwood Dimension and Flooring Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary to other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Hardwood Dimension and Flooring Industry amounted to $352 million. Of this total, $46 million were products primary to other industries; and $14 million were receipts for miscellaneous activities. The industry shipments of primary products represented 87 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 84 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $337 million of hardwood dimension and flooring were shipped by all producers of these products. Of this total, $293 million, or 87 percent, were shipped by plants classified in Industry 2426, Hardwood Dimension and Flooring, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 81.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries, and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary

products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-24A-1

INDUSTRY SERIES

preliminary report

Special product sawmills, n.e.c.

SIC Code 2429

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Special Product Sawmills, N.E.C., Industry shipped products valued at $93 million, an increase of 4 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 2 percent from 1958 to a total of 7.0 thousand employees in 1963. Value added by manufacture amounted to $40 million in 1963, an increase of 12 percent from 1958.

The Special Product Sawmills, N.E.C., Industry includes establishments engaged primarily in the manufacture of excelsior, wood shingles, and cooperage stock, and in sawing special products not elsewhere classified.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE SPECIAL PRODUCT SAWMILLS, N.E.C., INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2429)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	508	105	7,009	25,070	6,458	10,862	22,275	40,391	50,496	93,210	1,903
1958	478	105	7,176	22,097	6,465	10,678	18,804	36,123	56,159	89,381	1,682
1954[3]	448	108	7,324	20,038	6,817	11,261	17,310	(NA)	41,163	74,852	1,448
1947[3]	490	(NA)	15,898	30,153	15,270	(NA)	27,624	47,151	41,743	88,894	(NA)

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

February 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in The Special Product Sawmills, N.E.C. Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary to other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Special Products Sawmill, N.E.C. Industry amounted to $93 million. Of this total, $10 million were products primary to other industries; and receipts for miscellaneous activities. The industry shipments of primary products represented 95 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 93 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $176 million of Special Sawmill Products were shipped by all producers of these products. Of this total, $83 million, or 47 percent, were shipped by plants classified in Industry 2429, Special Product Sawmills, NEC, while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 60 percent. The coverage ratio shown for this industry is unusually low because of the large amount of wood chips manufactured by establishments classified in Industry 2421, Sawmills and Planing Mills. Of the $93 million of wood chips reported in table 3 for 1963, approximately $88 million were produced by establishments classified in Industry 2421.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued.

Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE SPECIAL PRODUCTS SAWMILLS, N.E.C., INDUSTRY BY REGIONS AND STATES: 1963 AND 1958

(SIC code 2429)

Region and State	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture

1963 CENSUS OF MANUFACTURES

MC63(P)-24B.1

INDUSTRY SERIES

preliminary report

Millwork plants SIC Code 2431

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Millwork Plants shipped products valued at $1,269 million, an increase of 21 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 5 percent over 1958 and 10 percent over 1962 to a total of 65 thousand employees in 1963. Value added by manufacture amounted to $524 million in 1963, an increase of 27 percent over 1958 and 23 percent over 1962.

Millwork Plants include establishments engaged primarily in the manufacture of fabricated millwork made from wood, including doors, mouldings and trim, window units and window sash and cabinet work made on a custom basis for household use.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.--GENERAL STATISTICS FOR MILLWORK PLANTS IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2431)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]

- Represents zero. (NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Millwork Plants consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Millwork Plants amounted to $1,269 million. Of this total, $73 million were products primary to other industries; and $131 million were receipts for miscellaneous activities. The industry shipments of primary products represented 94 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $1,136 million of millwork products were shipped by all producers of these products. Of this total, $1,065 million, or 94 percent, were shipped by plants classified in Industry 2431, Millwork Plants, while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 92 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

- Represents zero. (NA) Not available. (S) Does not meet publication standards. (X) Not applicable. rRevised.

[1]Some manufacturers purchase doors made by others and add door frames to them to produce door units. Thus, an undetermined amount of duplication is included in the shipments of wood doors.

[2]Includes doors faced with hard pressed wood fiber board (hardboard).

[3]Includes wood frame window screens only; in 1958, shipments of architectural millwork products were not reported separately.

1963 CENSUS OF MANUFACTURES

MC63(P)-248-2

INDUSTRY SERIES

preliminary report

Veneer and plywood plants

SIC Code 2432

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Veneer and Plywood Plants shipped products valued at $1,332 million, an increase of 51 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 12 percent over 1958 and a decrease of 3 percent from 1962 to a total of 66.4 thousand employees in 1963. Value added by manufacture amounted to $554 million in 1963, an increase of 42 percent over 1958 and 13 percent over 1962.

Veneer and Plywood Plants include establishments engaged primarily in the manufacture of commerical veneer, either face or technical, and those primarily engaged in manufacturing commerical plywood, including nonwood backed or faced veneer and nonwood faced plywood, from veneer produced in the same establishment or from purchased veneer. Establishments primarily engaged in manufacturing prefinished plywood from purchased plywood are also classified in this industry.

Table 1.—GENERAL STATISTICS FOR VENEER AND PLYWOOD PLANTS IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2432)

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Veneer and Plywood Plants consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Veneer and Plywood Plants amounted to $1,332 million. Of this total, $129 million were products primary to other industries; and $26 million were receipts for miscellaneous activities. The industry shipments of primary products represent 90 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $1,263 million of veneer and plywood were shipped by all producers of these products. Of this total, $1,177 million, or 93 percent, were shipped by plants classified in Industry 2432, Veneer and Plywood Plants while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 95 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports

will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR VENEER AND PLYWOOD PLANTS, BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2432)

Geographic area	1963												1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new		All employees, number	Value added by manufacture

1963 CENSUS OF MANUFACTURES

MC63(P)-241.3

INDUSTRY SERIES

preliminary report

Prefabricated wood products

SIC Code 2433

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Prefabricated Wood Products Industry shipped products valued at $405 million, an increase of 26 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 18 percent over 1958 to a total of 15.9 thousand employees in 1963. Value added by manufacture amounted to $157 million in 1963, an increase of 28 percent over 1958.

The Prefabricated Wood Products Industry includes establishments engaged primarily in the manufacture of prefabricated wooden buildings, sections and panels; or in producing laminated or fabricated trusses, arches, and other structural members of lumber. Prefabrication on the site of construction is not included in this industry.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.--GENERAL STATISTICS FOR THE PREFABRICATED WOOD PRODUCTS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2433)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	556	202	15,927	81,293	11,694	22,831	50,233	156,938	250,659	404,809	7,560
1958	374	150	13,550	61,984	9,942	19,303	38,294	122,344	201,436	322,279	4,418
1954[3]	231	111	11,547	45,905	9,216	(NA)	29,125	90,529	154,861	245,457	(NA)
1947[3]	206	122	10,075	27,879	8,381	(NA)	20,384	38,695	64,616	103,311	(NA)
1939[3]	48	(NA)	(NA)	(NA)	1,748	(NA)	1,500	3,627	5,171	8,798	(NA)

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

June 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Prefabricated Wood Products Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Prefabricated Wood Products Industry amounted to $405 million. Of this total, $5 million were products primary to other industries; and $35 million were receipts for miscellaneous activities. The industry shipments of primary products represent 99 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was also 99 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $379 million of Prefabricated Wood Products were shipped by all producers of these products. Of this total, $365 million, or 96 percent, were shipped by plants classified in Industry 2433, Prefabricated Wood Products while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 98 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing

industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-24C-1

INDUSTRY SERIES

preliminary report

Nailed wooden boxes and shook

SIC Code 2441

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Nailed Wooden Boxes and Shook Industry shipped products valued at $206 million, a decrease of 3 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 31 percent from 1958 to a total of 14 thousand employees in 1963. Value added by manufacture amounted to $84 million in 1963, a decrease of 10 percent from 1958.

The Nailed Wooden Boxes and Shook Industry includes establishments engaged primarily in the manufacture of nailed and lock corner wooden boxes and shook for nailed and lock corner boxes.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. These totals include data for Alaska and Hawaii.

Table 1.—GENERAL STATISTICS FOR THE NAILED WOODEN BOXES AND SHOOK INDUSTRY IN THE UNITED STATES: 1963 AND 1958

(SIC code 2441)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2] [3]	653	182	14,467	55,854	12,904	26,242	45,902	83,901	122,104	205,647	6,041
1958[3] [4]	874	247	19,015	62,424	16,688	32,244	50,114	92,322	118,565	211,407	3,251

[1] Includes expenditures for plants under construction but not in operation.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3] A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1963 and 1958 are not comparable with those for earlier years.

[4] Revisions to totals reported for 1958 are due to changes for significantly large plants.

July 1965

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

Figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

Value added by manufacture represents adjusted value added and is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Nailed Wooden Boxes and Shook Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Nailed Wooden Boxes and Shook Industry amounted to $206 million. Of this total, $32 million were products primary to other industries; and $19 million were receipts for miscellaneous activities. The industry shipments of primary products represent 83 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 88 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $187 million of nailed wooden boxes and shook were shipped by all producers of these products. Of this total, $155 million, or 82 percent, were shipped by plants classified in Industry 2441, Nailed Wooden Boxes and Shook, while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 84 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P) 24C-1

INDUSTRY SERIES

preliminary report

Wirebound boxes and crates

SIC Code 2442

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Wirebound Boxes and Crates Industry shipped products valued at $117 million, an increase of 19 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed no change with a total of 10 thousand employees in both 1963 and 1958. Value added by manufacture amounted to $57 million in 1963, an increase of 23 percent from 1958.

The Wirebound Boxes and Crates Industry includes establishments engaged primarily in the manufacture of wirebound boxes and crates made from lumber, veneer or plywood.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Note: As a result of revisions introduced in the 1957 Standard Industrial Classification, comparable historical data are not available for this industry prior to 1958.

[r] Revised.

[1] Includes expenditures for plants under construction but not in operation.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

March 1965

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

Figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Wirebound Boxes and Crates Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary to other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Wirebound Boxes and Crates Industry amounted to $117 million. Of this total, $10 million were products primary to other industries; and $6 million were receipts for miscellaneous activities. The industry shipments of primary products represented 91 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $108 million of wirebound boxes and crates were shipped by all producers of these products. Of this total, $101 million, or 93 percent, were shipped by plants classified in Industry 2442, Wirebound Boxes and Crates while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 92 percent.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary

reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-24C-3

INDUSTRY SERIES

preliminary report

Veneer and plywood containers

SIC Code 2443

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Veneer and Plywood Containers Industry shipped products valued at $28 million, a decrease of 9 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 27 percent from 1958 to a total of 3.9 thousand employees in 1963. Value added by manufacture amounted to $16 million in 1963, a decrease of 13 percent from 1958.

The Veneer and Plywood Containers Industry includes establishments engaged primarily in the manufacture of veneer and plywood containers, except boxes, for shipping and marketing fruits and vegetables, including hampers, stave baskets and berry cups and tills.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE VENEER AND PLYWOOD CONTAINERS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2443)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)

(NA) Not available.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

March 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958 and 1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Veneer and Plywood Containers Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary to other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Veneer and Plywood Containers Industry amounted to $28 million. Of this total, $5 million were products primary to other industries and receipts for miscellaneous activities. The industry shipments of primary products represented 91 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 93 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $29 million of veneer and plywood containers were shipped by all producers of these products. Of this total, $23 million, or 78 percent, were shipped by plants classified in Industry 2443, Veneer and Plywood Containers while the remainder was shipped by plants classified in other industries. The 1958 ratio was 88 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Cooperage SIC Code 2445

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Cooperage Industry shipped products valued at $55 million, a decrease of 21 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 25 percent from 1958 and 10 percent from 1962 to a total of 2.9 thousand employees in 1963. Value added by manufacture amounted to $19 million in 1963, a decrease of 6 percent from 1958 and 10 percent from 1962.

The Cooperage Industry includes establishments engaged primarily in the manufacture of barrels, tubs, hogsheads, and other containers made of staves, except fruit and vegetable baskets.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parenthesis have standard errors exceeding 15 percent. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

BUREAU OF THE CENSUS, Richard M. Scammon, Director

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

The preliminary reports in the 1963 Census of Manufactures include, for each industry, a count of the number of operating establishments with comparable figures for 1958.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels from 1958 to 1963.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Cooperage Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary to other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Cooperage Industry amounted to $55 million. Approximately $5 million of this total were products primary to other industries and receipts for miscellaneous activities. The industry shipments of primary products represented 94 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 95 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $50 million of cooperage products were shipped by all producers of these products. Of this total, $49.7 million, or 99 percent, were shipped by plants classified in Industry 2445, Cooperage, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 98.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. A series of preliminary summary

reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-24C-5

INDUSTRY SERIES

preliminary report

Wood preserving

SIC Code 2491

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Wood Preserving Industry shipped products valued at $248 million, an increase of 22 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 3 percent over 1958 and 5 percent over 1962 to a total of 11.2 thousand employees in 1963. Value added by manufacture amounted to $94 million in 1963, an increase of 29 percent over 1958 and 11 percent over 1962.

The Wood Preserving Industry includes establishments engaged primarily in treating wood, sawed or planed in other establishments, with creosote or other preservatives to prevent decay and to protect against fire and insects. This industry also includes the cutting, treating, and selling of poles, posts, and piling; but establishments primarily engaged in manufacturing other wood products, which they may also treat with preservatives, are not included.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957

Table 1.—GENERAL STATISTICS FOR THE WOOD PRESERVING INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(NA) Not available.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

[4] The statistics for the cost of materials and value of products for 1954 and later years are not comparable with those for 1939-1953. The differences occur because statistics for 1939-1953 included an estimated value of forest products treated but not owned by the reporting establishments, whereas in the period 1954-1963 the statistics include only the value of wood owned by the reporting establishments.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Wood Preserving Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Wood Preserving Industry amounted to $248 million. Of this total, $5 million were products primary to other industries; and $11 million were receipts for miscellaneous activities. The industry shipments of primary products represent 98 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was also 98 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $240 million of treated wood products were shipped by all producers of these products. Of this total, $232 million, or 97 percent, were shipped by plants classified in Industry 2491, Wood Preserving while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 96 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports

will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-24C-6

INDUSTRY SERIES

preliminary report

Wood products, n.e.c. SIC Code 2499

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

A revision to the 1957 Standard Industrial Classification changed the definition of this industry to include hard pressed wood fiber board and fabricated hardboard products. These products were previously classified in Industry 2661, Building Paper and Building Board Mills, and Industry 2649, Paper and Board Products, N.E.C., respectively. Accordingly, the data for 1958 through 1962 have been revised.

During 1963, manufacturers in the Wood Products, N.E.C., Industry shipped products valued at $778 million, an increase of 35 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 15 percent from 1958 and 6 percent from 1962 to a total of 57.6 thousand employees in 1963. Value added by manufacture amounted to $416 million in 1963, an increase of 37 percent from 1958 and 11 percent from 1962.

The Wood Products, N.E.C., Industry includes establishments engaged primarily in turning and shaping wood and manufacturing miscellaneous wood products, not elsewhere classified, such as lasts and related products, cork products, mirror and picture frames, hard pressed wood fiber board, particleboard and fabricated hardboard products.

This report does not include figures for administrative offices, warehouses, garages, or

Table 1.—GENERAL STATISTICS FOR THE WOOD PRODUCTS, N.E.C., INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. [r]Revised.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

[4]Data for 1958 through 1962 have been revised due to a change in the 1957 Standard Industrial Classification definition of this industry. Establishments primarily engaged in the manufacture of hard pressed wood fiber wood, previously classified in Industry 2661, Building Paper and Building Board Mills, are now included in Industry 2499. This revision also classifies establishments primarily engaged in manufacturing fabricated hardboard products in Industry 2499. Such establishments were previously classified in Industry 2649, Paper and Board Products, N.E.C.

August 1965

other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

Figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

Value added by manufacture represents adjusted value added, which is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Wood Products, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Wood Products, N.E.C., Industry amounted to $778 million. Of this total, $72 million were products primary to other industries; and $30 million were receipts for miscellaneous activities. The industry shipments of primary products represent 90 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was also 90 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $784 million of wood products, n.e.c., were shipped by all producers of these products. Of this total, $676 million, or 86 percent, were shipped by plants classified in Industry 2499, Wood Products, N.E.C., while the remainder was shipped by plants classified in other industries. The comparable 1958 ratio was 88 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses

of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

(NA) Not available. (S) Does not meet publication standards. (X) Not applicable. [r]Revised.

[1]Includes 1958 value for fabricated hardboard products, code 2499569 and hard pressed wood fiber board, code 2499611. These products were previously classified in Industry 2649, Converted Paper and Paperboard Products, N.E.C., and Industry 2661, Building Paper and Board Mills, respectively.

[2]Includes approximately $13 million reported by small establishments that were requested to report a breakdown of their shipments by product class only.

[3]Data for these products are available on a quarterly basis for intercensal years in Current Industrial Reports, M34E, Plumbing Fixtures.

[4]Shipments of fabricated hardboard products for 1958 were included with other industrial paper and board products, code 2649569.

[5]Data for these products are available on a monthly basis for intercensal years in Current Industrial Reports, M26A, Pulp, Paper and Board.

[6]Data for these products are available for the intercensal years in Current Industrial Reports, BDSAF 582, Particleboard.

BCD...

a unique tool for economic analysis

BUSINESS CYCLE DEVELOPMENTS is published monthly for specialists concerned with the analysis of current business conditions. It summarizes many of the available economic time series in convenient form for short-term evaluation and interpretation and supplements other Department of Commerce reports on the economy. The features of this report are:

- The arrangement of series according to their usual timing relations during the course of the business cycle.
- The inclusion of special analytical measures and historical cyclical comparisons that help in evaluating the current stage of the business cycle.
- The speed with which the data are collected, assembled, and published. BCD is issued about the 22d of each month covering data for the preceding month.

About 90 principal indicators and over 300 components are used for the different measures shown. The movements of the series are shown against the background of the expansions and contractions of the general business cycle so that "leads" and "lags" can readily be detected and unusual cyclical developments spotted. Since almost all of the basic data presented in this report are available in other published sources, the value of BCD lies in its analytical arrangement and speed of publication.

The presentation and classification of the time series in the BCD report follows the business indicators approach. The classification of series and the business cycle turning dates are those designed by the National Bureau of Economic Research which, in recent years, has been a leader in this field of investigation.

For sale by the Government Printing Office, Washington, D.C. 20402. $6 a year ($1.50 additional for foreign mailing). Single copies, 60¢ each.

INDUSTRY SERIES

preliminary report

Wood furniture, not upholstered

SIC Code 2511

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Wood Furniture, Not Upholstered, Industry shipped products valued at $1,853 million, an increase of 34 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 12 percent over 1958 and 4 percent over 1962 to a total of 140.8 thousand employees in 1963. Value added by manufacture amounted to $993 million in 1963, an increase of 41 percent over 1958 and 10 percent over 1962.

The Wood Furniture, Not Upholstered, Industry includes establishments engaged primarily in the manufacture of nonupholstered wood household furniture commonly used in dwellings such as chairs, tables, bookcases, beds, TV and Hi Fi cabinets, and other case goods. This industry also includes the manufacture of wood kitchen cabinets on a factory basis, as well as infants' and children's wood furniture and outdoor and unpainted furniture.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification

Table 1.—GENERAL STATISTICS FOR THE WOOD FURNITURE, NOT UPHOLSTERED, INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] Does not include number of establishments in Alaska and Hawaii.

[4] Data for Alaska and Hawaii are not included.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

(SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Wood Furniture, Not Upholstered, Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Wood Furniture, Not Upholstered, Industry amounted to $1,853 million. Of this total, $105 million were products primary to other industries; and $76 million were receipts for miscellaenous activities. The industry shipments of primary products represent 96 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 94 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $1,750 million of wood furniture, not upholstered, were shipped by all producers of these products. Of this total, $1,672 million, or 96 percent, were shipped by plants classified in Industry 2511, Wood Furniture, Not Upholstered, while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 94 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports

will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-25A-2

INDUSTRY SERIES

preliminary report

Wood furniture, upholstered

SIC Code 2512

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Wood Furniture, Upholstered, Industry shipped products valued at $974 million, an increase of 25 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 7 percent over 1958 to a total of 67.6 thousand employees in 1963. Value added by manufacture amounted to $496 million in 1963, an increase of 28 percent over 1958 and 4 percent over 1962.

The Wood Furniture, Upholstered, Industry includes establishments engaged primarily in the manufacture of upholstered household furniture on wood frames, or wood frames for upholstered household furniture. Establishments primarily engaged in manufacturing dual purpose sleep furniture, such as studio couches, sofa beds and chair beds are classified in industry 2515, Mattresses and Bedsprings.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification

Table 1.—GENERAL STATISTICS FOR THE WOOD FURNITURE, UPHOLSTERED, INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2512)

(NA) Not available. (X) Not applicable. rRevised.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

(SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Wood Furniture, Upholstered, Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Wood Furniture, Upholstered, Industry amounted to $974 million. Of this total, $74 million were products primary to other industries; and $22 million were receipts for miscellaneous activities. The industry shipments of primary products represent 92 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 91 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry)should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $943 million of Wood Furniture, Upholstered, were shipped by all producers of these products. Of this total, $878 million, or 93 percent, were shipped by plants classified in Industry 2512, Wood Furniture, Upholstered, while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 92 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports

will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-25A-3

INDUSTRY SERIES

preliminary report

Metal household furniture

SIC Code 2514

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Metal Household Furniture Industry shipped products valued at $524 million, an increase of 6 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 3 percent from 1958 to a total of 29.3 thousand employees in 1963. Value added by manufacture amounted to $246 million in 1963, an increase of 26 percent over 1958.

The Metal Household Furniture Industry includes establishments engaged primarily in the manufacture of metal household furniture of a type commonly used in dwellings, whether padded or plain. Establishments primarily engaged in the manufacture of metal porch, lawn and other outdoor furniture are also included in this industry.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

Table 1.—GENERAL STATISTICS FOR THE METAL HOUSEHOLD FURNITURE INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2514)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	514	243	29,340	128,796	24,379	47,898	92,236	246,296	280,924	523,686	6,883
1958	626	272	30,338	124,620	24,576	48,170	89,165	218,667	274,660	496,147	6,266

1939[3]	138	(NA)	(NA)	(NA)	7,633	(NA)	8,490	19,587	20,380	39,967	(NA)

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvas of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

May 1965

and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Metal Household Furniture Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Metal Household Furniture Industry amounted to $524 million. Of this total, $71 million were products primary to other industries; and $11 million were receipts for miscellaneous activities. The industry shipments of primary products represent 86 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 88 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $497 million of metal household furniture were shipped by all producers of these products. Of this total, $442 million, or 89 percent, were shipped by plants classified in Industry 2514, Metal Household Furniture, while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 88 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued.

Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-25A-4

INDUSTRY SERIES

preliminary report

Mattresses and bedsprings

SIC Code 2515

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Mattresses and Bedsprings Industry shipped products valued at $629 million, an increase of 10 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 5 percent from both 1958 and 1962 to a total of 29.9 thousand employees in 1963. Value added by manufacture amounted to $280 million in 1963, an increase of 13 percent over 1958 and 6 percent over 1962.

The Mattresses and Bedsprings Industry includes establishments engaged primarily in the manufacture of innerspring mattresses, box spring mattresses, and noninnerspring mattresses containing felt, foam rubber, or any other filling material; and assembled wire springs for use on beds, couches and cots. This industry also includes establishments primarily engaged in manufacturing dual purpose sleep furniture, such as studio couches, sofa beds, and chair beds regardless of the material used in the frame.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report

Table 1.—GENERAL STATISTICS FOR THE MATTRESSES AND BEDSPRINGS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See the annual survey of manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are included only for 1963.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Mattresses and Bedsprings Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Mattresses and Bedsprings Industry amounted to $629 million. Of this total, $50 million were products primary to other industries; and $32 million were receipts for miscellaneous activities. The industry shipments of primary products represent 92 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 90 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $605 million of mattresses and bedsprings were shipped by all producers of these products. Of this total, $547 million, or 90 percent, were shipped by plants classified in Industry 2515, Mattresses and Bedsprings, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 88 percent.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities

(contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Note: Estimates of monthly shipments of mattresses and bedsprings are published for 1963 and previous years in Current Industrial Reports M25E, Mattresses and Bedsprings.

- Represents zero. (NA) Not available. (S) Does not meet publication standards. (X) Not applicable. rRevised.

1In 1958 shipments of foam core mattresses made of other than rubber latex were not reported separately. It is believed, however, that such shipments were negligible.

INDUSTRY SERIES

Wood office furniture

SIC Code 2521

preliminary report

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Wood Office Furniture Industry shipped products valued at $103 million, an increase of 63 percent over 1958 according to preliminary results obtained from the 1963 census. Average employment in this industry showed and increase of 15 percent from 1958 to a total of 6.7 thousand employees in 1963. Value added by manufacture amounted to $58 million in 1963, an increase of 51 percent over 1958.

The Wood Office Furniture Industry includes establishments engaged primarily in the manufacture of Wood Office Furniture, whether padded, upholstered or plain.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Wood Office Furniture Industry, consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Wood Office Furniture Industry amounted to $103 million. Of this total $8 million were products primary to other industries; and $5 million were receipts for miscellaneous activities. The industry shipments of primary products represented 91 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 89 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure appearing in table 3, indicates that $103 million of wood office furniture were shipped by all producers of these products. Of this total, $90 million, or 87 percent, were shipped by plants classified in Industry 2521, Wood Office Furniture, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 82 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. A series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-258.2

INDUSTRY SERIES

preliminary report

Metal office furniture

SIC Code 2522

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Metal Office Furniture Industry shipped products valued at $390 million, an increase of 36 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 14 percent over 1958 and 6 percent over 1962 to a total of 20 thousand employees in 1963. Value added by manufacture amounted to $227 million in 1963, an increase of 30 percent over 1958 and 4 percent over 1962.

The Metal Office Furniture Industry includes establishments engaged primarily in the manufacture of metal office furniture, whether padded or plain.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

(NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

February 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS, Richard M. Scammon, Director

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Metal Office Furniture Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary to other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Metal Office Furniture Industry amounted to $390 million. Of this total, $48 million were products primary to other industries; and $25 million were receipts for miscellaneous activities. The industry shipments of primary products represented 88 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was also 88 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $357 million of Metal Office Furniture were shipped by all producers of these products. Of this total, $316 million, or 89 percent, were shipped by plants classified in Industry 2522, Metal Office Furniture, while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 86 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-25B-3

INDUSTRY SERIES

preliminary report

Public building furniture

SIC Code 2531

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Public Building Furniture Industry shipped products valued at $265 million, an increase of 27 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 5 percent over 1958 to a total of 16.7 thousand employees in 1963. Value added by manufacture amounted to $140 million in 1963, an increase of 24 percent over 1958.

The Public Building Furniture Industry includes establishments engaged primarily in the manufacture of furniture for schools, theaters, assembly halls, churches and libraries. Establishments primarily engaged in manufacturing seats for public conveyances, as well as seats for automobiles, aircraft and stadiums are also included in this industry.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE PUBLIC BUILDING FURNITURE INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2531)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new [1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963 [2]	425	160	16,676	82,018	13,030	26,351	56,446	139,883	125,088	264,648	4,277
1958 [3]	390	147	15,952	69,342	12,620	25,759	48,401	112,881	97,962	208,406	4,941
1954 [3]	292	119	14,044	52,638	11,556	24,120	38,905	90,168	75,356	163,772	3,781

1939 [3]	106	(NA)	7,062	9,058	5,900	(NA)	6,568	15,241	11,438	26,679	(NA)

(NA) Not available.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Public Building Furniture Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Public Building Furniture Industry amounted to $265 million. Of this total, $30 million were products primary to other industries; and $14 million were receipts for miscellaneous activities. The industry shipments of primary products represented 88 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was also 88 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $260 million of public building furniture were shipped by all producers of these products. Of this total, $221 million, or 85 percent, were shipped by plants classified in Industry 2531, Public Building Furniture, while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 80 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

Partitions and fixtures

SIC Codes 2541 and 2542

preliminary report

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

Due to reportability and classification problems associated with the identification of partitions and fixtures as to wood or metal, general statistics for Industry 2541 have been combined with data for Industry 2542, Metal Partitions and Fixtures, for 1958 through 1962. As a result, comparable historical data are not available for these industries.

During 1963, manufacturers in the Wood Partitions and Fixtures and Metal Partitions and Fixtures Industries shipped products valued at $755 million, an increase of 40 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in these industries showed an increase of 17 percent from 1958 and 6 percent from 1962 to a total of 44 thousand employees in 1963. Value added by manufacture amounted to $427 million in 1963, an increase of 42 percent from 1958 and 10 percent from 1962.

Manufacturers in the Wood Partitions and Fixtures Industry, SIC 2541, shipped products valued at $382 million during 1963. Average employment in this industry amounted to 24 thousand employees, and value added by manufacture amounted to $215 million for the same period.

The Wood Partitions and Fixtures Industry includes establishments engaged primarily in the manufacture of wood shelving, lockers, office and store fixtures, prefabricated partitions, and related fabricated products.

Manufacturers in the Metal Partitions and Fixtures Industry, SIC 2542, shipped products valued at $373 million during 1963. Average employment in this industry amounted to 20 thousand employees and value added by manufacture amounted to $212 million for the same period.

The Metal Partitions and Fixtures Industry includes establishments engaged primarily in the manufacture of metal shelving, lockers, office and store fixtures, prefabricated partitions, and related fabricated products.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees

July 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. *10 cents.*

represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Wood Partitions and Fixtures Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Wood Partitions and Fixtures Industry amounted to $382 million. Of this total, $25 million were products primary to other industries; and $22 million were receipts for miscellaneous activities. The industry shipments of primary products represent 93 percent of the total manufactured product shipments, primary and secondary.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $378 million of wood partitions and fixtures were shipped by all producers of these products. Of this total, $335 million, or 89 percent, were shipped by plants classified in Industry 2541, Wood Partitions and Fixtures, while the remainder was shipped by plants classified in other industries.

The value of shipments reported by establishments classified in the Metal Partitions and Fixtures Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Metal Partitions and Fixtures Industry amounted to $373 million. Of this total, $69 million were products primary to other industries; and $14 million were receipts for miscellaneous activities. The industry shipments of primary products represent 81 percent of the total manufactured product shipments, primary and secondary.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $360 million of metal partitions and fixtures were shipped by all producers of these products. Of this total, $290 million, or 81 percent, were shipped by plants classified in Industry 2542, Metal Partitions and Fixtures, while the remainder was shipped by plants classified in other industries.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued.

Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

(NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the annual survey of manufactures volumes for further discussion of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

25410 36	Center floor tables and gondolas	11,717	[2]87,287
25410 37	Other fixtures and displays	11,062	
25410 38	Store fixtures, retail food stores	17,633	
25410 61	Counters, except bank counters, wood	[2]5,300	
25410 39	Other wood show and display cases, including wall types and tables	20,871	
25410 11	Partitions (prefabricated-assembled or knocked down)	19,410	11,628
25410 15	Shelving and lockers	5,718	6,112
25410 41	Cabinets (floor or wall types), wood	18,721	26,027
25410 71	Plastic laminated fixture tops, including drain boards, sink, cabinet, table, counter and fixture tops	61,271	(3)
25410 98	Other (window backs, telephone booths, miscellaneous display fixtures, cashier stands, clothing racks, wood bank counters, etc.)	33,525	48,483
25410 00	Wood partitions and fixtures not specified by kind	83,141	(1)
2542- --	Metal partitions and fixtures, total	360,267	(1)
	Store fixtures-retail (except food stores):		
25420 63	Custom	21,685	
25420 65	Manufacturers standard	30,794	13,972
25420 67	Store fixtures-retail food stores	18,919	
25420 69	Show and display cases, including wall types and tables, metal	9,789	
	Partitions (prefabricated-assembled or knocked down):		
25420 13	Toilet partitions	15,587	19,955
25420 17	Movable (except free standing)	45,015	37,097
25420 19	Other partitions, including free standing, excluding accordian and folding type doors	7,748	9,732
25420 31	Shelving	82,659	62,762
25420 51	Lockers, metal	30,205	27,456
25420 71	Cabinets (floor or wall types) metal	34,743	22,549
25420 81	Counters, except bank counters, metal	4,456	8,361
25420 98	Other (window backs, telephone booths, miscellaneous display fixtures, cashier stands, clothing racks, metal bank counters, except ornamental metal work, etc.)	37,326	35,704
25420 00	Metal partitions and fixtures, not specified by kind	21,341	(1)
25420 00 25410 00	Partitions and fixtures, not specified by kind	(1)	[1]118,061

[1]The products coded 2541000 and 2542000, Partitions and Fixtures, not specified by kind, were not classified by type of material for 1958. Due to the large value of the "not specified by kind" products, the two industries, 2541, Wood Partitions and Fixtures and 2542, Metal Partitions and Fixtures were combined and the total is reported under the heading 254, Partitions and Fixtures. The 7-digit product codes describe products reported by type, i.e., wood or metal, and those not classified by type are shown as partitions and fixtures, not specified by kind (codes 2541000 and 2542000).

[2]In 1958 manufacturers reported shipments of product code 2541061, Wood Counters, Except Bank Counters, totaling $24,685,000. In 1963 it is believed that substantial shipments were reported under codes 2541032 through 2541039 by manufacturers that reported under code 2541061 in 1958. For this reason 1958 shipments of wood counters, except bank counters have been combined with shipments of all retail store fixtures.

[3]Shipments of plastic laminated fixture tops were not reported separately in 1958.

MC63(P)-35B-6

INDUSTRY SERIES

preliminary report

Venetian blinds and shades

SIC Code 2591

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Venetian Blinds and Shades Industry shipped products valued at $184 million, compared to $186 million in 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 11 percent from 1958 to a total of 10 thousand employees in 1963. Value added by manufacture amounted to $85 million in 1963, an increase of 2 percent over 1958.

The Venetian Blinds and Shades Industry includes establishments engaged primarily in the manufacture of venetian blinds, regardless of the materials used, and shades except canvas shades and awnings.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE VENETIAN BLINDS AND SHADES INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2591)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	714	58	9,841	45,577	7,223	14,344	29,153	84,558	96,749	183,503	3,966
1958	849	84	11,048	42,986	8,087	15,139	28,060	82,543	102,694	185,610	3,271

1939[3]	553	(NA)	(NA)	(NA)	8,661	(NA)	8,488	24,511	29,502	54,013	(NA)

(NA) Not available. r Revised.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

February 1965

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Venetian Blinds and Shades Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary to other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Venetian Blinds and Shades Industry amounted to $184 million. Of this total, $21 million were products primary to other industries; and $28 million were receipts for miscellaneous activities. The industry shipments of primary products represented 86 percent of the total manufactured product shppments, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $151 million of venetian blinds and shades were shipped by all producers of these products. Of this total, $134 million, or 89 percent, were shipped by plants classified in Industry 2591, Venetian Blinds and Shades while the remainder was shipped by plants classified in other industries. The comparable ratio in 1958 was 93 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-26A-1

INDUSTRY SERIES

preliminary report

Paper mills, except building

SIC Code 2621

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Paper Mills, Except Building, Industry shipped products valued at $3,820 million, an increase of 17 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 1 percent from 1958 and 2 percent from 1962 to a total of 130 thousand employees in 1963. Value added by manufacture amounted to $1,853 million in 1963, an increase of 20 percent over 1958 but a 3 percent decline from 1962.

The Paper Mills, Except Building, Industry includes establishments engaged primarily in the manufacture of paper (except building paper, Industry 2661) from wood pulp and other fibers, and which may also manufacture converted paper products (confined almost exclusively to off-machine paper coating). Pulp mills combined with paper mills and not separately reported, are also included in this industry; where separately reported, they are classified in Industry 2611.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification

(NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1963 and 1958 are not comparable with those for earlier years.

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

(SIC) Manual, as amended to date. Data for Alaska and Hawaii are included.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Paper Mills, Except Building, Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Paper Mills, Except Building, Industry amounted to $3,820 million. Of this total, $377 million were products primary to other industries; and $39 million were receipts for miscellaneous activities. The industry shipments of primary products represent 90 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was also 90 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $3,684 million of paper were shipped by all producers of these products. Of this total, $3,404 million, or 95 percent, were shipped by plants classified in Industry 2621, Paper Mills, Except Building, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 92 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary

reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

INDUSTRY SERIES

preliminary report

Paperboard mills

SIC Code 2631

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Paperboard Mills shipped products valued at $2,380 million, an increase of 41 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 14 percent over 1958 and 11 percent over 1962 to a total of 65 thousand employees in 1963. Value added by manufacture amounted to $1,218 million in 1963, an increase of 45 percent over 1958 and 22 percent over 1962.

Paperboard Mills include establishments engaged primarily in the manufacture of paperboard, including paperboard coated on the paperboard machine, from wood pulp and other fibers. Pulp mills combined with paperboard mills, and not separately reported, are also included in this industry; where separately reported, they are classified in Industry 2611.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the annual survey of manufactures volumes for further discussion of the sampling estimate.

[3]A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that comparable data for prior years are not available.

May 1965

and Hawaii are included for 1958 and subsequent years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Paperboard Mills consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Paperboard Mills amounted to $2,380 million. Of this total, $399 million were products primary to other industries; and $11 million were receipts for miscellaneous activities. The industry shipments of primary products represent 83 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 90 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $2,184 million of paperboard were shipped by all producers of these products. Of this total, $1,970 million, or 90 percent, were shipped by plants classified in Industry 2631, Paperboard Mills, while the remainder was shipped by plants classified in other industries. The 1958 ratio was also 90 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued.

Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-26A-3

INDUSTRY SERIES

preliminary report

Building paper and board mills

SIC Code 2661

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in Building Paper and Board Mills shipped products valued at $282 million, a decrease of 15 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 28 percent from 1958, to a total of 12 thousand employees in 1963. Value added by manufacture amounted to $153 million in 1963, a decrease of 13 percent from 1958.

Building Paper and Board Mills include establishments engaged primarily in the manufacture of building paper and building board from wood pulp and other fibrous materials. Pulp mills combined with building paper and building board mills not reported separately, are also included in this industry; where separately reported they are classified in Industry 2611. Due to a change in the Standard Industrial Classification in 1963 Hard Pressed Wood Fiber Board Mills are no longer classified in this industry, but are included with Industry 2499, Wood Products, N.E.C.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establish-

1958[3]	169	87	16,598	82,219	14,086	30,063	66,487	175,368	156,132	329,808	(D)

(D) Withheld to avoid disclosing figures for individual companies.

[1] Includes expenditures for plants under construction but not in operation.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3] A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1963 and 1958 are not comparable with those for earlier years.

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified as Building Paper and Board Mills consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified as Building Paper and Board Mills amounted to $282 million. Of this total, $15 million were products primary to other industries; and $8 million were receipts for miscellaneous activities. The industry shipments of primary products represent 94 percent of the total manufactured product shipments, primary and secondary.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $299 million of building paper and building board were shipped by all producers of these products. Of this total, $258 million, or 86 percent, were shipped by plants classified in Industry 2661, Building Paper and Board Mills while the remainder was shipped by plants classified in other industries.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment" and "value added." Similar preliminary and final reports

will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-26B-L

INDUSTRY SERIES

preliminary report

Paper coating and glazing

SIC Code 2641

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Paper Coating and Glazing Industry shipped products valued at $1,178 million, an increase of 46 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 18 percent over 1958 and 6 percent over 1962 to a total of 33 thousand employees in 1963. Value added by manufacture amounted to $462 million in 1963, an increase of 45 percent over 1958 but a decline of 2 percent from 1962.

The Paper Coating and Glazing Industry includes establishments engaged primarily in the manufacture of coated, glazed, or varnished paper from purchased paper (including interplant transfers). Establishments primarily engaged in coating paper on the paper machine are classified in Industry 2621; those manufacturing carbon paper in Industry 3955; and photographic and blue-print paper in Industry 3861.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Paper Coating and Glazing Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Paper Coating and Glazing Industry amounted to $1,155 million. Of this total, $241 million were products primary to other industries; and $35 million were receipts for miscellaneous activities. The industry shipments of primary products represented 78 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 84 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $1,172 million of coated and glazed paper were shipped by all producers of these products. Of this total, $879 million, or 74 percent, were shipped by plants classified in Industry 2641, Paper Coating and Glazing while the remainder was shipped by plants classified in other industries. The 1958 ratio was 81 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing

industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in this or associated industries or areas, or (b) because the industry was of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on this industry.)

(D) Withheld to avoid disclosing figures for individual companies.

[1]Less than $500 thousand.

Table 3.—QUANTITY AND VALUE OF COATED AND GLAZED PAPER SHIPPED BY ALL PRODUCERS IN THE UNITES STATES: 1963 AND 1958

(Includes quantity and value of these products reported not only by establishments classified in the Paper Coating and Glazing Industry but also by establishments making these items as "secondary" products in other industries. See text under "Value of Shipments")

Product code	Product	Total shipments including interplant transfers			
		1963		1958	
		Quantity[1]	Value ($1,000)	Quantity[1]	Value ($1,000)

1963 CENSUS OF MANUFACTURES

MC63(P)-26B 2

INDUSTRY SERIES

preliminary report

Envelopes SIC Code 2642

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Envelopes Industry shipped products valued at $364 million, an increase of 34 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 17 percent from 1958 and 8 percent from 1962 to a total of 21 thousand employees in 1963. Value added by manufacture amounted to $188 million in 1963, an increase of 36 percent from 1958 and 17 percent from 1962.

The Envelope Industry includes establishments engaged primarily in the manufacture of envelopes of any description from purchased paper and other materials. Establishments primarily engaged in manufacturing papeteries (boxed stationery) are classified in Industry 2649, converted paper products, n.e.c.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE ENVELOPES INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Envelope Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Envelope Industry amounted to $364 million. Of this total, $21 million were products primary to other industries; and $25 million were receipts for miscellaneous activities. The industry shipments of primary products represent 94 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 93 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure appearing in table 3, indicates that $329 million of Envelopes were shipped by all producers of these products. Of this total, $318 million, or 96 percent, were shipped by plants classified in Industry 2642, Envelopes while the remainder was shipped by plants classified in other industries. The 1958 ratio was 94 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in

1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-26B-3

INDUSTRY SERIES

preliminary report

Bags, except textile bags

SIC Code 2643

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Bags, Except Textile Bags, Industry shipped products valued at $1,049 million, an increase of 15 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 7 percent over 1958 and 4 percent over 1962 to a total of 42 thousand employees in 1963. Value added by manufacture amounted to $370 million in 1963, an increase of 20 percent over 1958.

The Bags, Except Textile Bags, Industry includes establishments engaged primarily in the manufacture of bags from paper, cellophane, acetate, polyethylene, pliofilm, foil, and similar sheet or film materials.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.--GENERAL STATISTICS FOR THE BAGS, EXCEPT TEXTILE BAGS, INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2643)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture ($1,000)	Cost of materials ($1,000)	Value of shipments ($1,000)	Capital expenditures, new[1] ($1,000)	Standard error of estimate (percent) for number of employees column[2]

(NA) Not available. (X) Not applicable. rRevised.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Bags, Except Textile Bags, Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Bags, Except Textile Bags Industry amounted to $1,049 million. Of this total, $147 million were products primary to other industries; and $56 million were receipts for miscellaneous activities. The industry shipments of primary products represent 85 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 87 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $958 million of Bags, Except Textile Bags, were shipped by all producers of these products. Of this total, $846 million, or 88 percent, were shipped by plants classified in Industry 2643, Bags, Except Textile Bags, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 89 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in

1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-26B-4

INDUSTRY SERIES

Wallpaper SIC Code 2644

preliminary report

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Wallpaper Industry shipped products valued at $34 million, a decrease of 16 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 23 percent from 1958 to a total of 2 thousand employees in 1963. Value added by manufacture amounted to $19 million in 1963, a decrease of 13 percent from 1958.

The Wallpaper Industry includes establishments engaged primarily in designing, printing and embossing paper, plastic film or combination of both for use on interior walls and ceilings. The paper stock used by this industry is called "hanging paper" and is produced by paper mills classified in Industry 2621. Printed wallcloth is classified in Industry 2295.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent

years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the years 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of non-production workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958 and 1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Wallpaper Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Wallpaper Industry amounted to $34 million. Of this total, less than one million dollars were products primary to other industries; and $2 million were receipts for miscellaneous activities. The industry shipments of primary products represented 91 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 93 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $32 million of wallpaper were shipped by all producers of these products. Of this total, $31 million, or 99 percent, were shipped by plants classified in Industry 2644, Wallpaper, while the remainder was shipped by plants classified in other industries. The 1958 ratio was also 99 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. A series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in

1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-26B-5

INDUSTRY SERIES

preliminary report

Die cut paper and board

SIC Code 2645

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Die Cut Paper and Board Industry shipped products valued at $359 million, an increase of 55 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 19 percent from 1958 to a total of 15 thousand employees in 1963. Value added by manufacture amounted to $164 million in 1963, an increase of 46 percent from 1958.

The Die Cut Paper and Board Industry includes establishments engaged primarily in die cutting purchased paper and paperboard, and in manufacturing cardboard by laminating, and surface coating paperboard.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE DIE CUT PAPER AND BOARD INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2645)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)

1939[3]	121	(NA)	5,670	8,861	4,354	(NA)	5,454	17,194	16,070	33,264	(NA)

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Die Cut Paper and Board Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Die Cut Paper and Board Industry amounted to $359 million. Of this total, $52 million were products primary to other industries; and $22 million were receipts for miscellaneous activities. The industry shipments of primary products represented 76 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $370 million of die cut paper and board were shipped by all producers of these products. Of this total, $285 million, or 85 percent, were shipped by plants classified in Industry 2645, Die Cut Paper and Board, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 80 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. A series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965

through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE DIE CUT PAPER AND BOARD INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2645)

Geographic area	1963											1958

1963 CENSUS OF MANUFACTURES

MC63(P)-26B-6

INDUSTRY SERIES

preliminary report

Pressed and molded pulp goods

SIC Code 2646

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Pressed and Molded Pulp Goods Industry shipped products valued at $113 million, an increase of 44 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 30 percent from 1958 to a total of 6 thousand employees in 1963. Value added by manufacture amounted to $72 million in 1963, an increase of 44 percent over the 1958 figure.

The Pressed and Molded Pulp Goods Industry includes establishments engaged primarily in the manufacture of all kinds of pressed and molded pulp goods such as plates and utensils, and papier-maché articles other than statuary and art goods. Establishments primarily engaged in manufacturing plates and utensils from paper are classified in Industry 2649, Converted Paper Products, Not Elsewhere Classified.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification

Table 1.--GENERAL STATISTICS FOR THE PRESSED AND MOLDED PULP GOODS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2646)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	60	43	5,831	33,285	4,629	9,909	24,613	71,987	42,172	113,280	12,168
1958	55	28	4,472	21,254	3,697	7,781	15,929	49,819	30,157	78,780	2,170
1954[3]	29	16	2,882	11,630	2,401	5,018	9,111	26,012	16,921	42,381	3,215
1947[3]	19	10	1,748	4,910	1,482	3,224	3,870	9,672	6,519	16,191	1,046
1939[3]	14	(NA)	856	1,081	701	(NA)	819	2,304	1,522	3,826	(NA)

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available for 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

(SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Pressed and Molded Pulp Goods Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Pressed and Molded Pulp Goods Industry amounted to $113 million. Of this total, $6 million were products primary to other industries; and $1 million were receipts for miscellaneous activities. The industry shipments of primary products represented 94 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 99 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $108 million of pressed and molded pulp goods were shipped by all producers of these products. Of this total, $106 million, or 98 percent, were shipped by plants classified in Industry 2646, Pressed and Molded Pulp Goods, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 96.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of

such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-26B-7

INDUSTRY SERIES

preliminary report

Sanitary paper products and Converted paper products, n.e.c.

SIC Codes 2647 and 2649

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Sanitary Paper Products and Converted Paper Products, N.E.C., Industries shipped products valued at $1,561 million, an increase of 25 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in these industries was 48 thousand employees, while value added by manufacture amounted to $660 million.

Manufacturers in the Sanitary Paper Products Industry, SIC 2647, shipped products valued at $981 million, during 1963. Average employment in this industry amounted to 19 thousand employees, and value added by manufacture amounted to $366 million for the same period.

The Sanitary Paper Products Industry includes establishments engaged primarily in manufacturing from purchased paper (including interplant transfers) sanitary tissue health products, including sanitary napkins and tampons.

Manufacturers in the Converted Paper Products, N.E.C., Industry, SIC 2649, shipped products valued at $581 million, during 1963. Average employment in this industry amounted to 29 thousand employees and value added by manufacture amounted to $294 million for the same period.

The Converted Paper Products, N.E.C., Industry includes establishments engaged primarily in manufacturing from purchased paper or paperboard (including interplant transfers) miscellaneous converted paper and paperboard products, n.e.c.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in

2649	Converted paper products, n.e.c.: 1963	607	239	29,199	140,438	22,074	43,209	91,976	294,088	287,312	580,637	11,687
2647 2649	Sanitary paper products and converted paper products, n.e.c.:											
	1963[2]	726	316	48,462	253,386	37,850	75,737	178,220	660,059	907,780	1,561,402	28,256
	1958[3]	739	324	46,892	213,489	37,353	71,999	145,481	463,668	784,618	1,245,092	27,194

[1] Includes expenditures for plants under construction but not in operation.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimated and complete convass totals because of sampling fluctuations. For these industries, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3] A revision in the definition of Industry 2649, Converted Paper and Paperboard Products, N.E.C., was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1963 and 1958 are not comparable with those for earlier years. A subsequent revision in 1963 split out the sanitary paper products into a new Industry 2647, Sanitary Paper Products. The residual products remain in Industry 2649.

October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Sanitary Paper Products Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Sanitary Paper Products Industry amounted to $981 million. Of this total, $67 million were products primary to other industries; and $21 million were receipts for miscellaneous activities. The industry shipments of primary products represent 93 percent of the total manufactured product shipments, primary and secondary.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $916 million of sanitary paper health products were shipped by all producers of these products. Of this total, $893 million, or 97 percent, were shipped by plants classified in Industry 2647, Sanitary Paper Products, while the remainder was shipped by plants classified in other industries.

The value of shipments reported by establishments classified in the Converted Paper Products, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Converted Paper Products, N.E.C., Industry amounted to $581 million. Of this total, $115 million were products primary to other industries; and $25 million were receipts for miscellaneous activities. The industry shipments of primary products represent 79 percent of the total manufactured product shipments, primary and secondary.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3B, indicates that $577 million of converted paper products, n.e.c., were shipped by all producers of these products. Of this total, $441 million, or 76 percent, were shipped by plants classified in Industry 2649, Converted Paper Products, N.E.C., while the remainder was shipped by plants classified in other industries.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for these industries will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment" and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses

of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2A.—GENERAL STATISTICS FOR THE SANITARY PAPER PRODUCTS AND CONVERTED PAPER PRODUCTS, N.E.C., INDUSTRIES BY GEOGRAPHIC AREAS: 1963

n.e.c. Not elsewhere classified. (S) Does not meet publication standards. (X) Not applicable. rRevised.

[1]Quantity in short tons of paper and board consumed including finishing room waste.

[2]The value shown for these items is not included in the product class or industry totals, but is a memo item indicating a distribution of the value of shipments by end use for product codes 2649282 and 2649291. However, the value for these items does not equal the previously noted product codes, since not all respondents reported their sales by end use.

[3]Quantity and value for laminated wallboard code 2649561 are included with tiled wallboard code 2649565 for 1963 in order to avoid disclosing data for individual companies.

1963 CENSUS OF MANUFACTURES

MC63(P)-26C-1

INDUSTRY SERIES

preliminary report

Folding paperboard boxes

SIC Code 2651

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Folding Paperboard Boxes Industry shipped products valued at $1,054 million, an increase of 19 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 8 percent over 1958 and 10 percent over 1962 to a total of 50 thousand employees in 1963. Value added by manufacture amounted to $462 million in 1963, an increase of 18 percent over 1958 and 9 percent over 1962.

The Folding Paperboard Boxes Industry includes establishments engaged primarily in the manufacture of folding paperboard boxes from purchased paperboard (including interplant transfers).

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE FOLDING PAPERBOARD BOXES INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2651)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)	
1963.....	628	412	50,056	282,117	40,312	83,267	201,114	462,043	589,152	1,053,573	33,481	(X)
1962[2].....	(NA)	(NA)	45,410	245,881	36,835	75,161	177,087	424,337	531,458	944,519	33,043	3

(NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the annual survey of manufactures volumes for further discussion of the sampling estimate.

[3] A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that data for the industry prior to 1958 are not directly comparable. Details of this revision are described in the 1958 Census of Manufactures Volume II, Industry Statistics.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Folding Paperboard Boxes Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Folding Paperboard Boxes Industry amounted to $1,054 million. Of this total, $137 million were products primary to other industries and $30 million were receipts for miscellaneous activities. The industry shipments of primary products represented 87 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 85 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $1,020 million of folding paperboard boxes were shipped by all producers of these products. Of this total, $887 million, or 87 percent, were shipped by plants classified in Industry 2651, Folding Paperboard Boxes, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 90 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-26C-2

INDUSTRY SERIES

preliminary report

Set-up paperboard boxes

SIC Code 2652

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Set-Up Paperboard Boxes Industry shipped products valued at $230 million, an increase of 5 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 11 percent from 1958 to a total of 21 thousand employees in 1963. Value added by manufacture amounted to $131 million in 1963, an increase of 5 percent over 1958.

The Set-Up Paperboard Boxes Industry includes establishments engaged primarily in the manufacture of folding paperboard boxes from purchased paperboard (including interplant transfers).

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

Table 1.—GENERAL STATISTICS FOR THE SET-UP PAPERBOARD BOXES INDUSTRY IN THE UNITED STATES: 1958 AND 1963

(SIC code 2652)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	505	319	20,946	$4,800	18,067	35,353	63,367	131,045	99,815	230,012	5,227
1958[3]	527	347	23,532	80,924	19,942	38,304	59,368	124,892	95,072	219,240	5,930

[1]Includes expenditures for plants under construction but not in operation.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would by obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1963 and 1958 are not comparable with those for earlier years.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Sep-Up Paperboard Boxes Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Set-Up Paperboard Boxes Industry amounted to $230 million. Of this total, $20 million were products primary to other industries; and $6 million were receipts for miscellaneous activities. The industry shipments of primary products represent 91 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $236 million of set-up paperboard boxes were shipped by all producers of these products. Of this total, $204 million, or 86 percent, were shipped by plants classified in Industry 2652, Set-Up Paperboard Boxes, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 87 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued.

Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-26C-3

INDUSTRY SERIES

preliminary report

Corrugated shipping containers

SIC Code 2653

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Corrugated Shipping Containers Industry shipped products valued at $2,157 million, an increase of 32 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 17 percent over 1958 but approximately the same as 1962 to a total of 83.2 thousand employees in 1963. Value added by manufacture amounted to $793 million in 1963, an increase of 33 percent over 1958.

The Corrugated Shipping Containers Industry includes establishments engaged primarily in manufacturing corrugated and solid fiber boxes and related products from purchased paperboard of fiber stock (including interplant transfers).

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See the annual survey of manufactures volumes for further discussion of the sampling estimate.

[3]A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that comparable data for prior years are not available.

June 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Corrugated Shipping Containers Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Corrugated Shipping Containers Industry amounted to $2,157 million. Of this total, $67 million were products primary to other industries; and $52 million were receipts for miscellaneous activities. The industry shipments of primary products represent 96 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 97 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $2,104 million of corrugated and solid fiber boxes were shipped by all producers of these products. Of this total, $2,037 million, or 97 percent, were shipped by plants classified in Industry 2653, Corrugated Shipping Containers, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 95 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965

through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-36C-4

INDUSTRY SERIES

preliminary report

Sanitary food containers

SIC Code 2654

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Sanitary Food Containers Industry shipped products valued at $900 million, an increase of 32 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 11 percent from 1958 to a total of 33 thousand employees in 1963. Value added by manufacture amounted to $400 million in 1963, an increase of 29 percent from 1958 and 3 percent from 1962.

The Sanitary Food Containers Industry includes establishments engaged primarily in manufacturing food containers from special food board. Important products of this industry include fluid milk containers; folding plastic or paraffin coated cartons for butter, margarine, and shortening; ice cream containers; frozen food containers; liquid tight containers; round nested food containers; paper cups for hot or cold drinks; and pails for food and ice cream.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957

Table 1.—GENERAL STATISTICS FOR THE SANITARY FOOD CONTAINERS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2654)

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

April 1965

edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Sanitary Food Containers Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Sanitary Food Containers Industry amounted to $900 million. Of this total, $76 million were products primary to other industries; and $45 million were receipts for miscellaneous activities. The industry shipments of primary products represent 91 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $847 million of sanitary food containers were shipped by all producers of these products. Of this total, $779 million, or 92 percent, were shipped by plants classified in Industry 2654, Sanitary Food Containers, while the remainder was shipped by plants classified in other industries. The 1958 ratio was also 92.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also

their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A)which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-26C-2

INDUSTRY SERIES

preliminary report

Fiber cans, tubes, drums, etc.

SIC Code 2655

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Fiber Cans, Tubes, Drums, Etc., Industry shipped products valued at $244 million, an increase of 47 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 15 percent from 1958 and 3 percent from 1962 to a total of 12.6 thousand employees in 1963. Value added by manufacture amounted to $119 million in 1963, an increase of 50 percent from 1958 and 14 percent from 1962.

The Fiber Cans, Tubes, and Drums, Etc., Industry includes establishments engaged primarily in the manufacture from purchased material of fiber cans, cones, cores, mailing cases, ribbon-blocks, spools, tools, drums, and similar products with or without metal ends.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Fiber Cans, Tubes, Drums, Etc., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Fiber Cans, Tubes Drums, Etc., Industry amounted to $244 million. Of this total, $6 million were products primary to other industries; and $7 million were receipts for miscellaneous activities. The industry shipments of primary products represent 97 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 98 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $289 million of fiber cans, tubes, drums, etc., were shipped by all producers of these products. Of this total, $231 million, or 80 percent, were shipped by plants classified in Industry 2655, Fiber Cans, Tubes, Drums, Etc., while the remainder was shipped by plants classified in other industries. The 1958 ratio was also 80 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-27A-1

INDUSTRY SERIES

preliminary report

Newspapers SIC Code 2711

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Newspaper Industry had receipts of $4,434 million, an increase of 22 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 3 percent from 1958 and a decrease of 2 percent from 1962 to a total of 305 thousand employees in 1963. Value added by manufacture amounted to $3,157 million in 1963, an increase of 25 percent from 1958 and 3 percent from 1962.

The Newspaper Industry includes establishments engaged primarily in the publishing of newspapers, or in publishing and printing newspapers. Commercial printing is frequently carried on by establishments engaged in publishing and printing newspapers, but even though the commercial printing may be of major importance, such establishments are included in this industry. For the purposes of the census of manufactures, the term "newspaper" includes those publications issued at regular frequencies which contain news of interest to the general public.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report

(NA) Not available. (X) Not applicable. r Revised.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

July 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Newspaper Industry consists not only of receipts for publishing described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Newspapers Industry amounted to $4,434 million. Of this total, $254 million were products primary to other industries; and $39 million were receipts for miscellaneous activities. The industry receipts from primary activities represent 94 percent of the total receipts, both primary and secondary. The 1958 ratio was 96 percent.

Industry 2711, Receipts from Newspaper Publishing (primary activities), in 1963 amounted to 100 percent (coverage ratio), of these products valued at $4,141 million reported to the census. In 1958, the coverage ratio was also 100 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

27114 98	Other newspapers (including those issued more frequently than once a week but less than 4 times a week, also those issued less frequently than once a week)	(X)	[2]76,732	(X)	40,545
27110 00	Newspapers not specified by frequency and receipts undistributed between subscriptions and sales and advertising	(X)	81,744	(NA)	35,165

(NA) Not available. (X) Not applicable.

[1]Circulation data for weekly and other newspapers is not shown because this information was not reported by many small newspapers. However, based on the yearly subscription rate for those reporting circulation it is estimated that the aggregate average circulation per issue for weekly newspapers would be approximately 31,000,000 and newspapers other than daily and weekly, approximately 5,578,000.

[2]Partially estimated.

1963 CENSUS OF MANUFACTURES

MC63(P)-27A-2

INDUSTRY SERIES

preliminary report

Periodicals SIC Code 2721

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Periodicals Industry had receipts of $2,277 million, an increase of 36 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a slight increase from 1958 and a decrease of 3 percent from 1962 to a total of 67 thousand employees in 1963. Value added by manufacture amounted to $1,336 million in 1963, an increase of 43 percent from 1958 and approximately the same as 1962.

The Periodicals Industry includes establishments engaged primarily in publishing periodicals, or in preparing, publishing, and printing periodicals. These establishments carry on the various operations necessary for issuing periodicals, but may or may not perform their own printing.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE PERIODICALS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2721)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture ($1,000)	Cost of materials ($1,000)	Value of shipments ($1,000)	Capital expenditures, new[1] ($1,000)	Standard error of estimate (percent) for number of employees column[2]

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parenthesis have standard errors exceeding 15 percent. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

August 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS, A. Ross Eckler, Director

For sale by the Bureau of the Census, Washington, D.C. 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of receipts reported by establishments classified in the Periodicals Industry consists not only of receipts for publishing described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Periodicals Industry amounted to $2,277 million. Of this total, $202 million were products primary to other industries; and $100 million were receipts for miscellaneous activities. The industry receipts from primary products represent 91 percent of the total receipts, both, primary and secondary. The 1958 ratio was 93 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total receipts by all producers. The latter figure, appearing in table 3, indicates that $2,043 million of receipts from periodicals were reported by all producers of these products. Of this total, $1,974 million, or 97 percent, were receipts by plants classified in Industry 2721, Periodicals, while the remainder was receipts by plants classified in other industries. The 1958 ratio was 97 percent also.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE PERIODICALS INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

1963 CENSUS OF MANUFACTURES

MC63(P)-27A-3

INDUSTRY SERIES

preliminary report

Books, publishing and printing

SIC Code 2731

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, Manufacturers in the Books, Publishing and Printing Industry had receipts of $1,507 million, an increase of 46 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 18 percent from 1958, but a decrease of 4 percent from 1962 to a total of 45 thousand employees in 1963. Value added by manufacture amounted to $985 million in 1963, an increase of 60 percent from 1958 and 3 percent from 1962.

The Books, Publishing and Printing Industry includes establishments engaged primarily in publishing only, or in publishing and printing, books and pamphlets. Establishments primarily engaged in printing and binding (but not publishing) books and pamphlets are classified in Industry 2732, Book Printing.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE BOOKS, PUBLISHING AND PRINTING INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2731)

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See the annual survey of manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Book, Publishing and Printing Industry consists not only of receipts for publishing described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Books, Publishing and Printing Industry amounted to $1,507 million. Of this total, $127 million were products primary to other industries; and $65 million were receipts for miscellaneous activities. The industry receipts from primary activities (books, publishing and printing) represent 91 percent of the total receipts, both, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total receipts by all producers. The latter figure, appearing in table 3, indicates that $1,502 million of receipts from books, publishing and printing were reported by all producers of these products. Of this total, $1,315 million, or 88 percent, were receipts by plants classified in Industry 2731, Books, Publishing and Printing while the remainder were receipts by plants classified in other industries. The 1958 ratio was 90 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965

through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-27A-4

INDUSTRY SERIES

preliminary report

Book printing SIC Code 2732

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Book Printing Industry had receipts of $535 million, an increase of 49 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 24 percent over 1958 and 4 percent over 1962 to a total of 35 thousand employees in 1963. Value added by manufacture amounted to $349 million in 1963, an increase of 54 percent over 1958 and 10 percent over 1962.

The Book Printing Industry includes establishments engaged in printing only or in printing and binding books and pamphlets, but not engaged in publishing. Establishments primarily engaged in publishing, or in publishing and printing books and pamphlets, are classified in Industry 2731. Establishments primarily binding books printed elsewhere, are classified in Industry 2789.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

Table 1.—GENERAL STATISTICS FOR THE BOOK PRINTING INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See the annual survey of manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

May 1965

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Book Printing Industry consists not only of receipts for service described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Book Printing Industry amounted to $535 million. Of this total, $120 million were products primary to other industries; and $10 million were receipts for miscellaneous activities. The industry receipts from primary activities (book printing) represent 77 percent of the total receipts, both primary and secondary. The 1958 ratio was 72 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total receipts by all producers. The latter figure, appearing in table 3, indicates that $598 million of receipts from book printing were reported by all producers of these products. Of this total, $405 million, or 68 percent, were receipts by plants classified in Industry 2732, Book Printing, while the remainder were receipts by plants classified in other industries. The 1958 ratio was 55 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the receipts by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports

will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-27A-5

INDUSTRY SERIES

preliminary report

Miscellaneous publishing

SIC Code 2741

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Miscellaneous Publishing Industry had receipts of $381 million, an increase of 20 percent over 1958, according to preliminary results obtained form the 1963 census. Average employment in this industry showed an increase of 11 percent over 1958 and 4 percent over 1962 to a total of 22 thousand employees in 1963. Value added by manufacture amounted to $259 million in 1963, an increase of 25 percent over 1958 and 3 percent over 1962.

The Miscellaneous Publishing Industry includes establishments engaged primarily in publishing such products as maps, atlases, sheet music, directories, almanacs, catalogs, and cards other than greeting cards or engaged in miscellaneous publishing activities, not elsewhere classified, whether or not engaged in printing.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE MISCELLANEOUS PUBLISHING INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See the annual survey of manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

June 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Miscellaneous Publishing Industry consists not only of receipts for service described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Miscellaneous Publishing Industry amounted to $381 million. Of this total, $12 million were products primary to other industries; and $36 million were receipts for miscellaneous activities. The industry receipts from primary activities in miscellaenous publishing represent 96 percent of the total receipts, both, primary and secondary. The 1958 ratio was 89 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total receipts by all producers. The latter figure, appearing in table 3, indicates that $410 million of receipts from miscellaneous publishing were reported by all producers of these products. Of this total, $333 million, or 81 percent, were receipts by plants classified in Industry 2741, Miscellaneous Publishing, while the remainder were receipts by plants classified in other industries. The 1958 ratio was 87 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the receipts by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965

through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in this or associated industries or areas, or (b) because the industry was of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on this industry.)

[1]Less than $500 thousand.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Miscellaneous Publishing Industry consists not only of receipts for service described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Miscellaneous Publishing Industry amounted to $381 million. Of this total, $12 million were products primary to other industries; and $36 million were receipts for miscellaneous activities. The industry receipts from primary activities in miscellaenous publishing represent 96 percent of the total receipts, both, primary and secondary. The 1958 ratio was 89 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total receipts by all producers. The latter figure, appearing in table 3, indicates that $410 million of receipts from miscellaneous publishing were reported by all producers of these products. Of this total, $333 million, or 81 percent, were receipts by plants classified in Industry 2741, Miscellaneous Publishing, while the remainder were receipts by plants classified in other industries. The 1958 ratio was 87 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the receipts by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965

through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

Commercial printing

SIC Codes 2751 and 2752

(Letterpress, lithography, gravure, and screen process)

preliminary report

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Commercial Printing (letterpress, lithographic, gravure, and screen process), Except Engraving, Industries had receipts of $4,856 million, according to preliminary results obtained from the 1963 Census. Average employment in these industries was 292 thousand employees, while the value added by manufacture amounted to $2,926 million.

Manufacturers in the Commercial Printing, Except Lithographic, Industry, SIC 2751 had receipts during 1963 of $2,688 million. Average employment in this industry amounted to 171 thousand employees, and value added by manufacture amounted to $1,611 million for the same period.

The Commercial Printing, Except Lithographic, Industry includes establishments engaged primarily in commercial or job printing by letterpress, gravure, screen and other printing processes, except lithography. Establishments primarily engaged in printing books (without publishing) and greeting cards, are included in Industries 2732 and 2771, respectively.

The Commercial Printing, Lithographic, Industry had receipts of $2,168 million during 1963. Average employment in this industry amounted to 121 thousand employees, while value added by manufacture amounted to $1,314 million during this same period.

The Commercial Printing, Lithographic, Industry includes establishments engaged primarily in commercial or job printing by the lithographic process. Offset printing, photo-offset printing, and photolithographing are also included in this industry as well as establishments primarily engaged in the making of lithographic plates for others.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Commercial Printing, Except Lithographic, Industry consists not only of receipts for service described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in Commercial Printing, Except Lithographic, Industry amounted to $2,688 million. Of this total, $350 million were products primary to other industries; and $100 million were receipts for miscellaneous activities. The industry receipts from primary activities (commercial printing, except lithographic) represent 86 percent of the total receipts, both primary and secondary.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total receipts by all producers. The latter figure, appearing in table 3A, indicates that $2,756 million of receipts from commercial printing, except lithographic, were reported by all producers of these products. Of this total, $2,238 million, or 81 percent, were receipts by plants classified in Industry 2751, Commercial Printing, Except Lithographic, while the remainder were receipts by plants classified in other industries.

The value of shipments reported by establishments classified in the Commercial Printing, Lithographic, Industry amounted to $2,168 million. Of this total, $70 million were receipts primary to other industries; and $505 million were receipts for miscellaneous activities. The industry receipts from primary activities (commercial lithographic printing) represent 75 percent of the total receipts, both primary and secondary.

Table 3B indicates that $2,022 million of receipts from commercial lithographic printing were reported by all producers of these products. Of this total, $1,593 million, or 79 percent, were receipts by plants classified in Industry 2752, Commercial Printing, Lithographic, while the remainder were receipts by plants classified in other industries.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

The 1963 establishment count and the other general statistics are not directly comparable with previously published data for Industries 2751, Commercial Printing, Except Lithographic, and 2752, Commercial Printing, Lithographic. The historical data are comparable, however, on a combined basis for general statistics. This combination is necessary for prior year data due to misclassification between these two industries in 1958 of a large number of small establishments (generally companies with less than 9 employees). This does not affect significantly the comparability of the detailed product statistics appearing in table 3 of this report. It is expected that revised data for each of these industries for prior years will appear in the final census report.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. A series of preliminary summary

reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in this or associated industries or areas, or (b) because the industry was of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on this industry.)

Table 3A.—VALUE OF COMMERCIAL PRINTING, EXCEPT LITHOGRAPHIC, SHIPPED BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Includes value of receipts reported not only by establishments classified in the Commercial Printing, Except Lithographic, Industry but also by establishments having receipts for these items as secondary activities in other industries. See text under "Value of Shipments")

Product code	Product	Value of receipts including interplant transfers ($1,000)	
		1963	1958
2751- --	Commercial printing, except lithographic, total	2,756,185	r2,454,663
27511 --	Magazines and periodicals printing	620,563	r452,657
27511 15	Magazines and periodicals (exclude magazine and comic supplements for Sunday newspapers)	577,508	r452,657
27511 17	Magazine and comic supplements for Sunday newspapers	43,055	
27512 --	Labels and wrappers printing	295,738	263,144
	Labels custom and stock printed including bordered, made of paper or foil (exclude labels made of fabric) and set-up box labels:		
	Letterpress, including flexographic, printed:		
27512 12	Flat, except pressure sensitive	1117,972	138,473
27512 14	Roll, except pressure sensitive	116,338	15,960
27512 15	Decalcomanias	1,509	1,216
27512 17	Pressure sensitive	130,659	(1)
	Wrappers or wraps, printed rolls and sheets (except oiled, waxed laminated or coated structures):		
27512 31	Cellophane (flexographic printed)	55,714	57,774
27512 33	Paper	19,476	31,350
27512 39	Other, including polyethylene (flexographic printed)	38,716	18,371
27512 00	Labels and wrappers (letterpress printing) not reported separately	15,354	-
27513 --	Catalogs and directories	148,469	139,892
27513 11	Catalogs	70,597	57,160
27513 15	Directories of all types	72,334	64,723
27513 00	Catalogs and directories, not reported separately	5,538	18,009
27514 --	Financial and legal printing (excluding manifold business forms; whether continuous, unit-set or other)	110,364	76,790
27514 23	Financial and legal printing, including insurance forms, security certificates, SEC filings, prospect uses, briefs, etc	58,057	
27514 25	Bank printing, including deposit slips, counter checks, business checks, imprinting of bank checks	28,696	76,790
27514 27	Bank form printing, including printing of pass books, debits and credit slips, ledger and statement sheets, including the printing of installment loan coupon books, etc. (excluding check books)	9,011	
27514 00	financial and legal printing, not reported separately	14,600	
27515 --	Advertising printing	278,146	348,679
	Advertising printing (printing designed to sell products or services):		
27515 11	Direct mail, including circulars, letters, pamphlets, cards, and printed envelopes	125,410	179,837
27515 21	Display advertising (posters, car cards, window, counter and floor displays, and other printed display material)	29,571	28,442
27515 98	Other advertising printing, including brochures, pamphlets, catalog sheets, circular folders, broadsides, announcements, package inserts, etc	78,263	98,914
27515 00	Advertising printing, not specified by kind	44,902	41,486
27516 --	Other general job printing	726,785	r643,165

1963 CENSUS OF MANUFACTURES

MC63(P)-27B3

INDUSTRY SERIES

preliminary report

Engraving and plate printing

SIC Code 2753

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Engraving and Plate Printing Industry had receipts of $110 million, an increase of 26 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 2 percent from 1958 to a total of 9 thousand employees in 1963. Value added by manufacture amounted to $79 million in 1963, an increase of 23 percent over 1958.

The Engraving and Plate Printing Industry includes establishments engaged primarily in engraving and etching steel, copper, wood, or rubber plates, in using these plates to print stationery, visiting and other cards, invitations, maps, etc.; and in making woodcuts for use in printing illustrations, posters, etc. Engraving for purposes other than printing is classified in Industry 3479. Establishments primarily engaged in preparing photoengraved plates (halftones and line cuts) are classified in Industry 2793.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

Table 1.—GENERAL STATISTICS FOR THE ENGRAVING AND PLATE PRINTING INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2753)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	577	104	8,822	50,178	7,009	13,534	37,751	79,360	30,403	109,626	2,830
1958	528	102	9,047	43,115	7,228	13,554	33,348	64,471	23,168	87,202	3,596
1954[3]	567	69	7,510	29,412	6,080	11,963	21,739	43,663	17,630	61,294	1,702

1939[3]	436	(NA)	6,865	10,429	5,353	(NA)	7,156	16,134	6,030	22,164	(NA)

(NA) Not available.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

June 1965

and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Engraving and Plate Printing Industry consists not only of receipts for service described above as primary to the industry, but also of the value of secondary products (which are primary in other industries) and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Engraving and Plate Printing Industry amounted to $110 million. Of this total, $10 million were products primary to other industries; and $5 million were receipts for miscellaneous activities. The industry receipts from primary activities (engraving and plate printing) represent 91 percent of the total receipts, both primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total receipts by all producers. The latter figure, appearing in table 3, indicates that $119 million of receipts from engraving and plate printing were reported by all producers of these products. Of this total, $95 million, or 80 percent, were receipts by plants classified in Industry 2753, Engraving and Plate Printing, while the remainder were receipts by plants classified in other industries. The 1958 ratio was 82 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the receipts by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued.

Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-27B-4

INDUSTRY SERIES

preliminary report

Manifold business forms

SIC Code 2761

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Manifold Business Forms Industry shipped products valued at $621 million, an increase of 53 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 20 percent from 1958 and 4 percent from 1962 to a total of 28 thousand employees in 1963. Value added by manufacture amounted to $367 million in 1963, an increase of 49 percent from 1958 and 11 percent from 1962.

The Manifold Business Forms Industry includes establishments engaged primarily in designing and printing, by any process, special forms for use in the operation of a business, in single and multiple sets, including carbonized or interleaved with carbon or otherwise processed for multiple reproduction.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

(NA) Not available. (X) Not applicable. rRevised.

[1]Includes expenditures for plants under construction but not in operation.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These stimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The rcentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals cause of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See the annual survey of manufactures olumes for further discussion of the sampling estimate.

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Manifold Business Forms Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Manifold Business Forms Industry amounted to $621 million. Of this total, $44 million were products primary to other industries; and $32 million were receipts for miscellaneous activities. The industry shipments of primary products represented 92 percent of the total manufactured proudct shipments, primary and secondary. The 1958 ratio was 91 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $596 million of manifold business forms were shipped by all producers of these products. Of this total, $545 million, or 91 percent, were shipped by plants classified in Industry 2761, Manifold Business Forms while the remainder was shipped by plants classified in other industries. The 1958 ratio was 90 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-27C-1

INDUSTRY SERIES

preliminary report

Greeting card manufacturing

SIC Code 2771

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, establishments in the Greeting Card Manufacturing Industry had receipts of $345 million, an increase of 18 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a slight decline from 1958 to a total of 21 thousand employees in 1963. Value added by manufacture amounted to $203 million in 1963, an increase of 14 percent from 1958.

The Greeting Card Manufacturing Industry includes establishments engaged primarily in the designing, publishing, and printing by any process of greeting cards for all occasions.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE GREETING CARD MANUFACTURING INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2771)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parenthesis have standard errors exceeding 15 percent. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

February 1965

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in The Greeting Card Manufacturing Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of receipts of establishments classified in the Greeting Card Manufacturing Industry amounted to $345 million. Of this total, $25 million were products primary to other industries; and $25 million were receipts for miscellaneous activities. The industry shipments of primary activities (Greeting Card Manufacturing) represented 91 percent of the total receipts, both, primary and secondary. The 1958 ratio was 94 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total receipts by all producers. The latter figure, appearing in table 3, indicates that $308 million of receipts from greeting card manufacturing were reported by all producers of these products. Of this total, $294 million, or 96 percent, were receipts by plants classified in Industry 2771, Greeting Card Manufacturing, while the remainder were receipts by plants classified in other industries. The 1958 ratio was 93 percent.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the receipts by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE GREETING CARD MANUFACTURING INDUSTRY BY REGIONS AND STATES: 1963 AND 1958

(SIC code 2771)

Region and State	1963											1958

1963 CENSUS OF MANUFACTURES

MC63(P)-27C-2

INDUSTRY SERIES

preliminary report

Blankbooks; looseleaf binders

SIC Code 2782

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Blankbooks, Looseleaf Binders Industry had receipts of $267 million, an increase of 22 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a slight increase from 1958 to a total of 18 thousand employees in 1963. Value added by manufacture amounted to $168 million in 1963, an increase of 27 percent over 1958.

The Blankbooks; Looseleaf Binders Industry includes establishments engaged primarily in the manufacturing of blankbooks, looseleaf devices, and library binders.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE BLANKBOOKS, LOOSELEAF BINDERS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2782)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	410	158	17,940	91,181	14,392	28,720	63,971	168,204	101,078	266,788	6,107
1958	434	166	17,872	79,024	13,756	26,838	52,740	132,660	83,325	217,862	6,805
1954[3]	488	122	16,823	60,779	13,281	26,084	41,548	98,895	63,649	162,546	3,087

1939[3]	379	(NA)	(NA)	(NA)	9,090	(NA)	10,974	34,058	16,973	51,031	(NA)

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Blankbooks, Looseleaf Binders Industry consists not only of receipts for products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Blankbooks; Looseleaf Binders Industry amounted to $267 million. Of this total, $30 million were products primary to other industries; and $20 million were receipts for miscellaneous activities. The industry receipts from primary activities (blankbooks, looseleaf binders) represent 88 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 85 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry)should be clearly distinguished from the total receipts by all producers. The latter figure, appearing in table 3, indicates that $248 million of blankbooks and looseleaf binders were shipped by all producers of these products. Of this total, $217 million, or 87 percent, were shipped by plants classified in Industry 2782,Blankbooks, Looseleaf Binders, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 84 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the

coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-27C-3

INDUSTRY SERIES

preliminary report

Bookbinding and related work

SIC Code 2789

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, Manufacturers in the Bookbinding and Related Work Industry had receipts of $229 million, an increase of 26 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 10 percent from 1958 to a total of 24 thousand employees in 1963. Value added by manufacture amounted to $173 million in 1963, an increase of 30 percent over 1958.

The Bookbinding and Related Work Industry includes establishments engaged primarily in book or paper bronzing, gilding, and edging; in map and sample mounting; and other services related to bookbinding. Also all establishments engaged in binding books printed elsewhere, but those primarily binding books printed in the same establishments are classified in Group 273, Books.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

Table 1.—GENERAL STATISTICS FOR THE BOOKBINDING AND RELATED WORK INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2789)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	1,039	312	24,408	115,245	21,728	40,951	93,000	172,736	57,622	229,032	7,938
1958	972	294	22,160	87,448	19,480	37,378	69,000	132,722	48,646	181,987	6,621
1954[3]	931	250	20,481	69,891	18,363	35,039	56,694	103,045	35,846	138,891	4,369
1947[3]	906	(NA)	25,660	65,492	22,953	46,204	55,064	103,725	29,423	133,148	4,172
1939[3]	758	(NA)	(NA)	(NA)	16,801	(NA)	18,367	39,106	13,837	52,943	(NA)

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

March 1965

and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Bookbinding and Related Work Industry consists not only of receipts for service described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Bookbinding and Related Work Industry amounted to $229 million. Of this total, $11 million were products primary to other industries; and $15 million were receipts for miscellaneous activities. The industry receipts from primary activities (commercial bookbinding and related work) represented 95 percent of the total receipts, both primary and secondary. The 1958 ratio was 94 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total receipts by all producers. The latter figure, appearing in table 3, indicates that $243 million of receipts from bookbinding and related work were reported by all producers of these products. Of this total, $203 million, or 84 percent, were receipts by plants classified in Industry 2789, Bookbinding and Related Work while the remainder were receipts by plants classified in other industries. The 1958 ratio was 86 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the receipts by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965

through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

INDUSTRY SERIES

preliminary report

Typesetting SIC Code 2791

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Typesetting Industry had receipts of $242 million, an increase of 36 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 17 percent from 1958 to a total of 21 thousand employees in 1963. Value added by manufacture amounted to $206 million in 1963, an increase of 33 percent from 1958.

The Typesetting Industry includes establishments engaged primarily in machine and hand typesetting for the trade, including advertisement typesetting.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE TYPESETTING INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

February 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Typesetting Industry consists not only of receipts described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of receipts of establishments classified in the Typesetting Industry amounted to $242 million. Of this total, $11 million were products primary to other industries; and $5 million were receipts for miscellaneous activities. The industry receipts from primary activities (Typesetting) represented 95 percent of the total receipts, both primary and secondary. The 1958 ratio was 93 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total receipts by all producers. The latter figure, appearing in table 3, indicates that $249 million of receipts from typesetting were reported by all producers of these products. Of this total, $225 million, or 90 percent, were receipts by plants classified in Industry 2791, Typesetting while the remainder were receipts by plants classified in other industries. The 1958 ratio was 92 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the receipts by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in

1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Photoengraving SIC Code 2793

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Photoengraving Industry had receipts of $211 million, an increase of 1 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 16 percent from 1958 and 1 percent from 1962 to a total of 15 thousand employees in 1963. Value added by manufacture amounted to $171 million in 1963, approximately the same as 1958 but a 13 percent increase from 1962

The Photoengraving Industry includes establishments engaged primarily in preparing photoengraving plates (halftones and line-cuts). These establishments do not, as a rule, print from the plates which they make, but prepare them for use by others.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. (Figures shown in parentheses have standard errors exceeding 15 percent.) See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

February 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS, Richard M. Scammon, Director

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURES

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Photoengraving Industry consists not only of receipts for services described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of receipts of establishments classified in the Photoengraving Industry amounted to $211 million. Of this total, $11 million were products primary to other industries; and $5 million were receipts for miscellaneous activities. The industry receipts from primary activities (Photoengraving) represented 95 percent of the total receipts, both, primary and secondary. The 1958 ratio was also 95 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total receipts by all producers. The latter figure, appearing in table 3, indicated that $214 million of receipts from Photoengraving were reported by all producers of these products. Of this total, $195 million, or 91 percent, were receipts by plants classified in Industry 2793, Photoengraving while the remainder was receipts by plants classified in other industries. The 1958 ratio was 93 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the receipts by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Electrotyping and stereotyping

SIC Code 2794

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, establishments classified in the Electrotyping and Stereotyping Industry had receipts of $74 million, a decrease of 9 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 25 percent from 1958 to a total of 5.0 thousand employees in 1963. Value added by manufacture amounted to $56 million in 1963, a decrease of 10 percent from 1958.

The Electrotyping and Stereotyping Industry includes establishments engaged primarily in preparing electrotype and stereotype plates. These establishments do not as a rule, print from the plates which they make, but prepare them for use by others.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

BUREAU OF THE CENSUS, Richard M. Scammon, Director

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Electrotyping and Stereotyping Industry consists not only of receipts for services described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of receipts of establishments classified in the Electrotyping and Stereotyping Industry amounted to $74 million. Of this total, $9 million were products primary to other industries; and $5 million were receipts for miscellaneous activities. The industry receipts from primary activities (electrotyping and stereotyping) represented 87 percent of the total receipts, both primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total receipts by all producers. The latter figure, appearing in table 3, indicates that $70 million of receipts from electrotyping, stereotyping and matrixes were reported by all producers of these products. Of this total, $60 million, or 85 percent, were receipts by plants classified in Industry 2794, Electrotyping and Stereotyping, while the remainder was receipts by plants classified in other industries. The 1958 ratio was 87 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the receipts by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-28A-1

INDUSTRY SERIES

Alkalies and chlorine

SIC Code 2812

preliminary report

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Alkalies and Chlorine Industry shipped products valued at $645 million, an increase of 28 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 5 percent from 1958 to a total of 19.5 thousand employees in 1963. Value added by manufacture amounted to $388 million in 1963, an increase of 27 percent from 1958.

The Alkalies and Chlorine Industry includes establishments engaged primarily in the manufacture of sodium hydroxide (caustic soda), potassium hydroxide (caustic potash), soda ash, potassium carbonate, sodium bicarbonate, sal soda, and chlorine. For a detailed list of products included in Industry 2812, refer to table 3, product codes 2812111 to 2812481.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one pay roll period (usually in October). The figures for production workers, 1954 and 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Alkalies and Chlorine Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Alkalies and Chlorine Industry amounted to $645 million. Of this total $201 million were products primary to other industries; and $20 million were receipts for miscellaneous activities. The industry shipments of primary products represented 68 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 73 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $524 million of alkalies and chlorine were shipped by all producers of these products. Of this total, $424 million, or 81 percent, were shipped by plants classified in Industry 2812, Alkalies and Chlorine, while the remainder was shipped by plants classified in other industries. In 1958, this ratio was 84 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.--GENERAL STATISTICS FOR THE ALKALIES AND CHLORINE INDUSTRY, BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2812)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture

Note: Although these data should be considered preliminary, they supersede the figures published for comparable products in Current Industrial Reports Series, M28A(63)-13 Inorganic Chemicals and Cases, Summary for 1963.

(D) Withheld to avoid disclosing figures for individual companies. (X) Not applicable.

[1]Includes quantities liquefied for use, storage, or shipment.

[2]Excludes data for natural soda ash. In 1963, 1,119 thousand tons of natural soda ash were produced and shipments were valued at $27,616 thousand, according to information published in the Bureau of Mines Minerals Yearbook. Comparable 1958 data are 629 thousand tons produced and 639 thousand tons valued at $17,175 thousand shipped.

[3]Ammonia soda and caustic carbonation processes.

[4]Includes quantities used to manufacture caustic soda, finished sodium bicarbonate, finished light and dense soda ash, calcium carbonate, etc.

[5]Quantity figures reported in terms of soda ash processed to refined bicarbonate.

[6]Excludes quantities converted to finished dense soda ash.

[7]Includes quantities later evaporated to solid caustic and reported as such.

[8]Includes some liquid shipped as interplant transfers to other establishments for further processing to dry forms.

[9]Includes unspecified amounts produced from liquid caustic received from other establishments.

[10]Includes potassium carbonate, modified sodas, electrolytic soda ash, sodium carbonate (monohydrate) and sal soda and excludes products classified as alkaline detergents.

U.S. DEPARTMENT OF COMMERCE

1963 CENSUS OF MANUFACTURES

MC63(P)-28A-2

INDUSTRY SERIES

preliminary report

Industrial gases SIC Code 2813

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Industrial Gases Industry shipped products valued at $429 million, an increase of 55 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 6 percent from 1958 to a total of 10.0 thousand employees in 1963. Value added by manufacture amounted to $261 million in 1963, an increase of 40 percent from 1958.

The Industrial Gases Industry includes establishments engaged primarily in the manufacture of gases for sale in compressed, liquid, and solid form, such as acetylene, carbon dioxide (dry ice), nitrous oxide, and elemental gases such as argon, hydrogen, nitrogen, and oxygen.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

Table 1.--GENERAL STATISTICS FOR THE INDUSTRIAL GASES INDUSTRY FOR SELECTED YEARS

(SIC code 2813)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963	460	148	10,003	67,888	5,335	11,231	34,112	261,063	167,743	429,136	85,939

and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963 value added by manufacture represents adjusted value added; for earlier years represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Industrial Gases Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Industrial Gases Industry amounted to $429 million. Of this total, $17 million were products primary to other industries; and $79 million were receipts for miscellaneous activities. The industry shipments of primary products represented 95 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 99 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $388 million of industrial gases were shipped by all producers of these products. Of this total, $334 million, or 86 percent, were shipped by plants classified in Industry 2813, Industrial Gases, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 85.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers including those in other industries, and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also

their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

(D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (X) Not applicable.
[1]Excludes value for helium produced in government owned plants. [2]Excludes information from railroad shops, shipyards, welding shops, and small establishments using portable generators. [3]Excludes production of liquid and gas carbon dioxide converted to and reported as dry ice and also amounts converted from pure carbon dioxide (liquid or solid) purchased or received from other plants. Also excludes quantities produced and consumed in plants manufacturing soda ash or urea. [4]Source: U.S. Department of Interior, Bureau of Mines. Does not include helium produced at the privately owned Kerr-McGee plant but includes helium purchased for conservation. [5]Excludes amounts vented, used as fuel, etc., and amounts produced and consumed in the manufacture of synthetic ammonia and methanol, but includes an unspecified amount produced for sale or interplant transfer to plants consuming this gas in the production of ammonia. Also excludes amounts produced by the ammonia dissociation process (cracking of ammonia). Includes amounts of hydrogen produced by some, but not all, petroleum refineries producing hydrogen from catalytic reforming operations. [6]Small amount shipped as liquid included in gas data, and not shown separately to avoid disclosing operations of individual companies. [7]Excludes amounts produced and consumed in the manufacture of synthetic ammonia or ammonia derivatives. [8]Excludes amounts produced and used in the manufacture of ammonia. [9]Code 28134 57 combined with 28134 98. [10]Excludes hydrocarbon gases such as propane, butane and propylene or halogenated hydrocarbons and cyclopropane, which are reported in the U.S. Tariff Commission report "Synthetic Organic Chemicals." Also excludes data for sulfur dioxide and chlorine.

Source of data: Current Industrial Reports Series M28A (Supplement 2), "Industrial Gases."

1963 CENSUS OF MANUFACTURES

MC63(P)-28A-3

INDUSTRY SERIES

preliminary report

Cyclic (coal tar) crudes

SIC Code 2814

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Cyclic (coal tar) Crudes Industry shipped products valued at $90 million, a decrease of 23 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 33 percent from 1958 to a total of 1.4 thousand employees in 1963. Value added by manufacture amounted to $30 million in 1963, which represents no change from 1958.

The Cyclic (coal tar) Crudes Industry includes establishments engaged primarily in the manufacture of crudes from coal tar. Such crudes include (1) light oils and light oil products; (2) coal tar acids; and (3) products of medium and heavy oil such as creosote oil, napthalene, anthracene, and their higher homologues, and tar.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U. S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Cyclic (coal tar) Crudes Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Cyclic (coal tar) Crudes Industry amounted to $90 million. Of this total, $27 million were products primary to other industries; and $2 million were receipts for miscellaneous activities. The industry shipments of primary products represented 69 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 76 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $79 million of tar, tar crudes, and tar pitches were shipped by all producers of these products. Of this total, $60 million, or 77 percent, were shipped by plants classified in Industry 2814, Cyclic (coal tar) Crudes, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 83 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. A series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in

1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-28A-1

INDUSTRY SERIES

preliminary report

Intermediate coal tar products

SIC Code 2815

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Intermediate Coal Tar Products Industry shipped products valued at $1,097 million, an increase of 34 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 1 percent from 1958 and an increase of 4 percent from 1962 to a total of 26.0 thousand employees in 1963. Value added by manufacture amounted to $566 million in 1963, an increase of 52 percent from 1958 and 14 percent from 1962.

The Intermediate Coal Tar Products Industry includes establishments engaged primarily in the manufacture of intermediates, dyes, color lakes and toners. Important products of this industry include (1) derivatives of benzene, toluene, phenol, aniline, nitro-benzene, and other cyclic intermediates; (2) synthetic organic dyes; and (3) synthetic organic pigments.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954 and 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Intermediate Coal Tar Products Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Intermediate Coal Tar Products Industry amounted to $1,097 million. Of this total, $372 million were products primary to other industries; and $52 million were receipts for miscellaneous activities. The industry shipments of primary products represented 64 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 76 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $1,095 million of intermediates, dyes, color lakes, and toners were shipped by all producers of these products. Of this total, $673 million, or 61 percent, were shipped by plants classified in Industry 2815, Intermediate Coal Tar Products while the remainder was shipped by plants classified in other industries. The 1958 ratio was 65 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports

will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.--GENERAL STATISTICS FOR THE INTERMEDIATE COAL TAR PRODUCTS INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2815)

Geographic area	1963											1958

1963 CENSUS OF MANUFACTURES

MC63(P)-28A-5

INDUSTRY SERIES

preliminary report

Inorganic pigments

SIC Code 2816

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Inorganic Pigments Industry shipped products valued at $491 million, an increase of 17 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 3 percent from 1958 to a total of 11.7 thousand employees in 1963. Value added by manufacture amounted to $289 million in 1963, an increase of 23 percent from 1958.

The Inorganic Pigments Industry includes establishments engaged primarily in the manufacture of inorganic pigments. Important products of this industry include white pigments such as white lead and titanium dioxide pigments and color pigments such as chrome, iron and other dry colors.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.--GENERAL STATISTICS FOR THE INORGANIC PIGMENTS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2816)

(NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parenthesis have standard errors exceeding 15 percent. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] Data for Alaska and Hawaii are not included.

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954 and 1958-1963 are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Inorganic Pigments Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Inorganic Pigments Industry amounted to $491 million. Of this total, $43 million were products primary to other industries; and $21 million were receipts for miscellaneous activities. The industry shipments of primary products represented 91 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 92 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $486 million of inorganic pigments were shipped by all producers of these products. Of this total, $428 million, or 88 percent, were shipped by plants classified in Industry 2816, inorganic pigments while the remainder was shipped by plants classified in other industries. The 1958 ratio was 89 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. A series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in

1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Organic chemicals, n.e.c.

SIC Code 2818

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Organic Chemicals, N.E.C., Industry shipped products valued at $4,850 million, an increase of 57 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 10 percent from 1958 and 4 percent from 1962 to a total of 85.6 thousand employees in 1963. Value added by manufacture amounted to $2,738 million in 1963, an increase of 64 percent from 1958 and 12 percent from 1962.

The Organic Chemicals, N.E.C., Industry includes establishments engaged primarily in the manufacture of industrial organic chemicals, n.e.c. Important products of this industry include: (1) noncyclic organic chemicals such as acetic, chloroacetic, adipic, formic, oxalic, and tartaric acids and their metal salts; chloral, formaldehyde, and methylamine; (2) solvents such as amyl, butyl, and ethyl alcohols; methanol; ethylene glycol; amyl, butyl, and ethylene acetates; ethyl ether, ethylene glycol ether; and diethylene glycol ether; acetone, carbon disulfide, and carbon tetrachloride; (3) synthetic perfume and flavoring materials such as coumarin, methyl salicylate, saccharin, citral, citronellal, synthetic geraniol, ionone, terpineol, and synthetic vanillin; (4) rubber chemicals such as accelerators and anti-oxidants; (5) plasticizers such as

(NA) Not available. (X) Not applicable. rRevised.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

March 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

phthalates and triceresyl and triphenyl phosphates; (6) synthetic tanning materials; and (7) chemical-warfare gases.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954 and 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Organic Chemicals, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Organic Chemicals, N.E.C., Industry amounted to $4,850 million. Of this total, $1,330 million were products primary to other industries; and $139 million were receipts for miscellaneous activities. The industry shipments of primary products represented 72 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 73 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure appearing in table 3, indicates that $4,169 million of industrial organic chemicals, n.e.c., were shipped by all producers of these products. Of this total, $3,381 million or 81 percent, were shipped by plants classified in Industry 2818, Organic Chemicals, N.E.C., while the remainder was shipped by plants classified in other industries. The 1958 ratio was 79 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Inorganic chemicals, n.e.c.

SIC Code 2819

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Inorganic Chemicals, N.E.C., Industry shipped products valued at $3,511 million, an increase of 27 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 8 percent from 1958

(NA) Not available. (X) Not applicable. rRevised.

[1]For years 1954-1963 data include value added for government-owned, contractor operated plants which was estimated based upon averages reported for commercial establishments in prior years.

[2]For years 1954-1963 data exclude government-owned materials furnished to government-owned contractor operated plants and includes fuels and electricity purchased by or for these establishments.

[3]For years 1954-1963 data includes a calculated value of shipments for government-owned contractor operated plants comprised of adjusted value added (estimated as described in footnote 1) plus the cost of fuels and electric energy.

[4]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954. Capital expenditures of government-owned, contractor operated plants are excluded from the totals for the industry.

[5]The data are estimated derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the annual survey of manufactures volumes for further discussion of the sampling estimate.

[6]Inorganic Chemicals, N.E.C., total, includes in addition to privately-owned establishments government-owned contractor operated plants. See Part II for privately owned plants.

[7]A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that data for the industry prior to 1958 are not directly comparable. Details of this revision are described in the 1958 Census of Manufactures, Volume II, Industry Statistics.

[8]Privately-owned and privately operated establishments.

August 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS, A. Ross Eckler, Director

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

and 1 percent from 1962 to a total of 83 thousand employees in 1963. Value added by manufacture amounted to $1,907 million in 1963, an increase of 30 percent from 1958 and 7 percent from 1962.

The Inorganic Chemicals, N.E.C., Industry includes establishments engaged primarily in the manufacture of industrial inorganic chemicals, n.e.c. Important products of this industry include inorganic salts of sodium (excluding refined sodium chloride), potassium, aluminum, calcium, chromium, magnesium, mercury, nickel, silver, tin; inorganic compounds such as alums, calcium, carbide, hydrogen peroxide, phosphates, sodium silicate, ammonia compounds and anhydrous ammonia; fertilizer materials such as muriate and sulfate of potash; rare earth metal salts and elemental bromine, fluorine, iodine, phosphrous, and alkali metals (sodium, potassium, lithium, etc.).

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954 and 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Inorganic Chemicals, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Inorganic Chemicals, N.E.C., Industry amounted to $3,511 million. Of this total, $203 million were products primary to other industries; and $940 million were receipts for miscellaneous activities. The industry shipments of primary products represent 92 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 87 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $3,008 million of inorganic chemicals, n.e.c., were shipped by all producers of these products. Of this total, $2,369 million, or 79 percent, were shipped by plants classified in Industry 2819, Inorganic Chemicals, N.E.C., while the remainder was shipped by plants classified in other industries.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE INORGANIC CHEMICALS, N.E.C., INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2819)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture

n.e.c. Not elsewhere classified. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. [r]Revised.

[1]Includes value of inorganic chemicals shipped by establishments classified in "manufacturing" and "nonmanufacturing" industries. The value of shipments reported by "nonmanufacturing" establishments classified in the mineral industries and the Tennessee Valley Authority amounted to $159,982 thousand for 1963 and $127,696 thousand for 1958.

[2]Excludes data for byproduct ammonia liquor and ammonium sulfate published by the Bureau of Mines. The quantities of byproduct ammonia liquor (NH_3 content) produced were 14,524 short tons in 1963 and 14,903 short tons in 1958. The quantities of byproduct ammonium sulfate produced were 620,821 short tons in 1963 and 640,416 short tons in 1958.

[3]For 1963, represents total amount of original solution produced, including amounts used for fertilizer, explosive, and other uses and amounts consumed in manufacturing other products such as nitrogen solutions (product code 2819155). For 1958, production of original solution was not collected separately. The 1958 figure represents the total of code 2819151, 2819152, and 2819153.

[4]Excludes amounts converted to solid ammonium nitrate.

[5]Codes 2819421, 2819451, and 2819467 combined with code 2819498 for 1963, code 2819451 combined with code 2819498 for 1958.

[6]Represents complete coverage of all manufacturers by the inclusion of estimates which account for less than 5 percent of the total.

[7]In addition, 3,327 short tons in 1963, and 5,186 short tons in 1958, were produced by municipalities.

[8]Code 2819718 not collected separately in 1958; included in code 2819717.

[9]Represents quantities produced only for sale or interplant transfer.

[10]Excludes quantities consumed in the manufacture of meta-, ortho-, and sesqui-silicates. Shipments figures include unspecified amounts shipped to other plants for use in manufacturing meta-, ortho-, or sesquisiliates.

[11]Code 2819767 converted to 100% Na_2SO_4 and combined with code 2819765 for 1963.

[12]Excludes amounts converted to concentrated sodium sulfides.

[13]Code 2819785 combined with code 2819787 for 1963.

[14]Excludes pigment grades.

[15]Excludes quantities of liquid used to produce solid calcium chloride.

[16]Value of activated carbon, deordorizing grade, included in code 2819998.

[17]Codes 2819928 and 2819930 combined with code 2819932 for 1963.

[18]Code 2819940 combined with code 2819998 for 1963.

[19]Code 2819950 combined with code 2819952 for 1958.

[20]Code 2819954 combined with code 2819959 for 1963.

[21]Codes 2819990, and 2819996 combined with code 2819998 for 1958.

[22]Code 2819958 not collected separately in 1958; included with code 2819967.

[23]Collected and published by the Bureau of Mines.

[24]Code 2819974 combined with code 2819977 for 1958.

BCD...

a unique tool for economic analysis

BUSINESS CYCLE DEVELOPMENTS is published monthly for specialists concerned with the analysis of current business conditions. It summarizes many of the available economic time series in convenient form for short-term evaluation and interpretation and supplements other Department of Commerce reports on the economy. The features of this report are:

- The arrangement of series according to their usual timing relations during the course of the business cycle.
- The inclusion of special analytical measures and historical cyclical comparisons that help in evaluating the current stage of the business cycle.
- The speed with which the data are collected, assembled, and published. BCD is issued about the 22d of each month covering data for the preceding month.

About 90 principal indicators and over 300 components are used for the different measures shown. The movements of the series are shown against the background of the expansions and contractions of the general business cycle so that "leads" and "lags" can readily be detected and unusual cyclical developments spotted. Since almost all of the basic data presented in this report are available in other published sources, the value of BCD lies in its analytical arrangement and speed of publication.

The presentation and classification of the time series in the BCD report follows the business indicators approach. The classification of series and the business cycle turning dates are those designed by the National Bureau of Economic Research which, in recent years, has been a leader in this field of investigation.

INDUSTRY SERIES

preliminary report

Plastics materials and resins

SIC Code 2821

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Plastics Materials and Resins Industry shipped products valued at $2,570 million, an increase of 39 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 21 percent from 1958 and 7 percent from 1962 to a total of 61.6 thousand employees in 1963. Value added by manufacture amounted to $1,201 million in 1963, an increase of 38 percent from 1958 and 9 percent from 1962.

The Plastics Materials and Resins Industry includes establishments engaged primarily in the manufacture of cellulose plastics materials, regenerated cellulose, casein plastics, and vulcanized fiber, non-textile monofilaments, adhesives, film, sheets, rods and tubes made from resins produced in the same establishment (or polymerized directly from chemicals), and synthetic resins, such as acrylic, alkyd, coumarone indene and petroleum polymer, melamine, polyamide, polyester, polyethylene, polypropylene, silicone and urea.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957

Table 1.—GENERAL STATISTICS FOR THE PLASTICS MATERIALS AND RESINS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2821)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]

(NA) Not available. (X) Not applicable. rRevised.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

July 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Plastics Materials and Resins Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Plastics Materials and Resins Industry amounted to $2,570 million. Of this total, $324 million were products primary to other industries; and $67 million were receipts for miscellaneous activities. The industry shipments of primary products represent 87 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 84 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $3,279 million of plastics materials, synthetic resins and nonvulcanizable elastomers were shipped by all producers of these products. Of this total, $2,179 million, or 66 percent, were shipped by plants classified in Industry 2821, Plastics Materials and Resins while the remainder was shipped by plants classified in other industries. The 1958 ratio was 71 percent

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the

coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

28210 00	Plastics materials, systhetic resins and nonvulcanized elastomers, not specified by kind	(X)	(X)	7,789	(X)	(X)	1,401

n.e.c. Not elsewhere classified. (NA) Not available. (S) Does not meet publication standards. (X) Not applicable.

[1]Because of changes in classification, 1963 and 1958 product lines are not always comparable. In 1958, the only unsupported film, sheets, and sheeting separately classified were vinyl and polyethylene. All other unsupported film sheets, sheeting, rods and tubes made from resins produced in the same establishment were reported as resin. In addition, adhesives made from resins produced in the same establishment, and monofilaments were not separately shown in 1958.

[2]Detailed product figures for this product class will appear in the final census report. Preliminary 1963 product figures appear in Current Industrial Reports Series M30D(63)-1, Shipments of Selected Plastics Products.

[3]Quantities of resin produced and shipped were requested on a "resin content" basis for vinyl resins, and on a "dry" basis for all other resins.

[4]Acrylic resins, code 2821381 included in code 2821389.

[5]Combined figures for acrylic and epoxy resins in 1958 were: Production 229,380,000 lbs., Shipments 220,783,000 lbs., valued at $95,537,000.

[6]Casein resins, code 2821471 included in code 2821498.

PUBLICATION PROGRAM 1963 CENSUSES OF MANUFACTURES AND MINERAL INDUSTRIES

Results of the 1963 Censuses of Manufactures and Mineral Industries will be issued initially in preliminary reports which will furnish summary data. These reports will be superseded by more detailed final reports. An outline of the publication program is shown below.

PRELIMINARY REPORTS

Summary Series

Manufactures (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. General statistics will also be presented for industries grouped according to market categories—durable and nondurable goods industries. A second report will provide general statistics without industry detail for regions, States, and large standard metropolitan statistical areas.

Mineral Industries (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. A second report will provide general statistics by 2-digit industry group for regions and States.

Industry Series

Manufactures (about 370 reports). Separate reports for virtually all of the 430 manufacturing industries will give industry totals for general statistics for the United States and for regions and States. A product table in each report will give the quantity and value of shipments of the products classified in the industry for the United States.

Mineral Industries (about 45 reports). Separate reports for industries or for groups of industries for all of the 50 mineral industries will present general statistics for the United States and for regions and States. A product table will give the quantity and value of shipments of the products classified in the industry for the United States and for regions and States.

Area Series

Manufactures (51 reports). A separate report for each State and the District of Columbia will present general statistics for the State and for the larger standard metropolitan statistical areas within the State by 2-digit and selected 3-digit industries, and for most individual counties on an "all manufacturing" basis.

Subject Series

Manufactures (2 reports). One report will provide data on the number of establishments, employment, and value added by manufacturing for each 4-digit industry according to employment size of the establishment in each industry. A separate report will provide statistics on inventories for each 4-digit industry on a national basis; State data on inventories will also be provided.

Mineral Industries (one report). This report will provide number of establishments, employment, and value added in mining for each 4-digit industry according to employment size of the establishment in each industry.

FINAL REPORTS

All preliminary reports will be superseded by comparable final reports. After separate final reports have been issued, they will be assembled and reissued in cloth bindings as follows:

Manufactures

Volume I, Summary Statistics

Volume II, Industry Statistics
Part 1, Major Groups 20-28
Part 2, Major Groups 29-39

Volume III, Area Statistics

Mineral Industries

Volume I, General Summary and Industry Statistics

Volume II, Area Statistics

1963 CENSUS OF MANUFACTURES IN PUERTO RICO

A separate 1963 Census of Manufactures was conducted jointly by the Puerto Rico Planning Board, Government of the Commonwealth of Puerto Rico, and the U.S. Bureau of the Census. A report of the findings will include statistics of manufacturing activity by industry and geographic area on value added by manufacture, employment, payrolls, inventories, capital expenditures, etc.

Additional Information and Order Forms

A more detailed description of the publication program of the 1963 censuses, including tentative publication dates, is available free of charge. Separate announcement and order forms for the preliminary reports of the censuses of manufactures and mineral industries are also available free of charge. Requests for order forms should specify which report series is desired. All requests should be addressed to the Publications Distribution Section, Bureau of the Census, Washington, D.C., 20233.

1963 CENSUS OF MANUFACTURES

MC63(P)-28B-2

INDUSTRY SERIES

preliminary report

Synthetic rubber

SIC Code 2822

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Synthetic Rubber Industry shipped products valued at $767 million, an increase of 43 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 29 percent from 1958 and 7 percent from 1962 to a total of 11.9 thousand employees in 1963. Value added by manufacture amounted to $329 million in 1963, an increase of 66 percent from 1958 and 3.2 percent from 1962.

The Synthetic Rubber Industry includes establishments engaged primarily in the manufacture of synthetic rubber by polymerization or copolymerization.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.--GENERAL STATISTICS FOR THE SYNTHETIC RUBBER INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2822)

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further explanation of the sampling estimates.

[3]Data for Alaska and Hawaii are not included.

[4]No comparable figures are available for earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Synthetic Rubber Industry consists not only of products described above as primary to the industry, but also to the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Synthetic Rubber Industry amounted to $767 million. Of this total, $59 million were products primary to other industries; and $19 million were receipts for miscellaneous activities. The industry shipments of primary products represented 92 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 95 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $859 million of synthetic rubber were shipped by all producers of these products. Of this total, $689 million, or 80 percent were shipped by plants classified in Industry 2822, Synthetic Rubber, while the remainder was shipped by plants classified in other industries. The comparable percentage in 1958 was 83.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing

industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.--GENERAL STATISTICS FOR THE SYNTHETIC RUBBER INDUSTRY BY REGIONS AND STATES: 1963 AND 1958

(SIC code 2822)

Region and State	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)		($1,000)

1963 CENSUS OF MANUFACTURES

MC63(P)-28B-3

INDUSTRY SERIES

preliminary report

Cellulosic man-made fibers

SIC Code 2823

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Cellulosic Man-made Fibers Industry shipped products valued at $699 million, a decrease of 3 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 29 percent from 1958 and 14 percent from 1962 to a total of 30 thousand employees in 1963. Value added by manufacture amounted to $379 million in 1963, a decrease of 3 percent from 1958 and 8 percent from 1962.

The Cellulosic Man-made Fibers Industry includes establishments engaged primarily in the manufacture of cellulosic fibers (including cellulose acetate and regenerated cellulose such as rayon by the viscose or cuprammonium process) in the form of monofilament, yarn, staple or tow suitable for further manufacturing on spindles, looms, knitting machines or other textile processing equipment.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification

Table 1.--GENERAL STATISTICS FOR THE CELLULOSIC MAN-MADE FIBERS INDUSTRY IN THE UNITED STATES: 1958-1963

(SIC code 2823)

(NA) Not available. (X) Not applicable. rRevised.

[1]Includes expenditures for plants under construction but not in operation.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

(SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963 value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Cellulosic Man-made Fibers Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Cellulosic Man-made Fibers Industry amounted to $699 million. Of this total, $133 million were products primary to other industries; and $5 million were receipts for miscellaneous activities. The industry shipments of primary products represented 81 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was also 81 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $617 million of cellulosic man-made fibers were shipped by all producers of these products. Of this total, $561 million, or 91 percent, were shipped by plants classified in Industry 2823, Cellulosic Man-made Fibers, while the remainder was shipped by plants classified in other industries.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports

will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

INDUSTRY SERIES

preliminary report

Organic fibers, noncellulosic

SIC Code 2824

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Organic Fibers, Noncellulosic, Industry shipped products valued at $1,378 million, an increase of 100 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 122 percent from 1958 and 30 percent from 1962 to a total of 41.4 thousand employees in 1963. Value added by manufacture amounted to $897 million in 1963, an increase of 104 percent from 1958 and 13 percent from 1962.

The Organic Fibers, Noncellulosic, Industry includes establishments engaged primarily in the manufacture of synthetic organic fibers except cellulosic (including those of regenerated proteins, and of polymers or copolymers of such components as vinyl chloride, vinylidene chloride, linear esters, vinyl alcohols, acrylonitrile, ethylenes, amides, and related polymeric materials) in the form of monofilament, yarn, staple or tow suitable for further manufacturing on spindles, looms, knitting machines or other textile processing equipment. Establishments primarily engaged in manufacturing textile glass fibers are classified in Industry 3229.

This report does not include figures for administrative offices, warehouses, garages, or

[1] Includes expenditures for plants under construction but not in operation.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

April 1965

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963 value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Organic Fibers, Noncellulosic, Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Organic Fibers, Noncellulosic, Industry amounted to $1,378 million.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $1,342 million of organic fibers, noncellulosic were shipped by all producers of these products.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary

reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-28C-1

INDUSTRY SERIES

preliminary report

Biological products

SIC Code 2831

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Biological Products Industry shipped products valued at $98 million, an increase of 54 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 60 percent from 1958 to a total of 5.9 thousand employees in 1963. Value added by manufacture amounted to $62 million in 1963, an increase of 59 percent from 1958.

The Biological Products Industry includes establishments engaged primarily in the production of bacterial and virus vaccines, toxoids and analogous products (such as allergenic extracts) serums, plasmas, and other blood derivatives for human or veterinary use. Excluded are the activities of the American Red Cross, hospitals and other institutions which are important collectors of blood and producers of blood products.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date.

Table 1.--GENERAL STATISTICS FOR THE BIOLOGICAL PRODUCTS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2831)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	113	40	5,901	34,384	3,722	7,375	17,328	61,880	39,203	98,162	10,220
1958	116	35	3,692	16,218	2,567	4,999	9,736	38,947	24,933	63,833	4,565
1954[3]	93	43	3,965	15,789	2,864	5,722	9,333	39,384	28,578	66,555	2,510

1939[3]	80	(NA)	(NA)	(NA)	2,155	(NA)	2,085	12,046	7,403	19,449	(NA)

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

March 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1949-1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1949-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Biological Products Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Biological Products Industry amounted to $98 million. Of this total, $12 million were products primary to other industries; and $9 million were receipts for miscellaneous activities. The industry shipments of primary products represent 86 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 89 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $155 million of biological products were shipped by all producers of these products. Of this total, $77 million, or 50 percent, were shipped by plants classified in Industry 2831, Biological Products while the remainder was shipped by plants classified in other industries. The 1958 ratio was 41 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965

through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-28C-2

Medicinals and botanicals

SIC Code 2833

preliminary report

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Medicinals and Botanicals Industry shipped products valued at $306 million, a decrease of 5 percent from 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 20 percent from 1958 and 9 percent from 1962 to a total of 8.2 thousand employees in 1963. Value added by manufacture amounted to $152 million in 1963, a decrease of 14 percent from 1958 and 4 percent from 1962.

The Medicinals and Botanicals Industry includes establishments engaged primarily in the manufacture of bulk medicinal organic and inorganic chemicals and their derivatives and in processing (grading, grinding, and milling) bulk botanical drugs and herbs.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

May 1965

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954 and 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Medicinals and Botanicals Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Medicinals and Botanicals Industry amounted to $306 million. Of this total, $83 million were products primary to other industries; and $19 million were receipts for miscellaneous activities. The industry shipments of primary products represent 71 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 72 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $433 million of medicinal chemicals and botanical products were shipped by all producers of these products. Of this total, $205 million, or 47 percent, were shipped by plants classified in Industry 2833, Medicinals and Botanicals, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 55 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-28C-1

INDUSTRY SERIES

preliminary report

Pharmaceutical preparations

SIC Code 2834

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Pharmaceutical Preparations Industry shipped products valued at $3,310 million, an increase of 28 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 4 percent from 1958, to a total of 84.9 thousand employees in 1963. Value added by manufacture amounted $2,589 million in 1963, an increase of 38 percent from 1958.

The Pharmaceutical Preparations Industry includes establishments primarily engaged in manufacturing, fabricating, or processing drugs into pharmaceutical preparations for human or veterinary use. The greater part of the products of these establishments are finished in the form intended for final consumption, such as tablets, capsules, ointments, solutions and suspensions. Products of this industry consist of two important lines; namely; (1) pharmaceutical preparations primarily advertised or otherwise promoted to or prescribed by the health professions: medical, dental, pharmaceutical, nursing, etc.; and (2) pharmaceutical preparations primarily advertised or otherwise promoted to the general public.

This report does not include figures for administrative offices, warehouses, garages, or

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Although the 1959-1962 data are not shown in this preliminary report, it is planned, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

August 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS, A. Ross Eckler, Director

other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958 and 1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Pharmaceutical Preparations Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Pharmaceutical Preparations Industry amounted to $3,310 million. Of this total, $320 million were products primary to other industries; and $85 million were receipts for miscellaneous activities. The industry shipments of primary products represent 89 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 87 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $2,998 million of pharmaceutical preparations were shipped by all producers of these products. Of this total, $2,870 million, or 96 percent, were shipped by plants classified in Industry 2834, Pharmaceutical Preparations while the remainder was shipped by plants classified in other industries. The 1958 ratio was 94 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports

will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

(NA) Not available. (x) Not applicable.

[1]A major revision in the classification of products classified in Industry 2834, Pharmaceutical Preparations, was introduced in 1963 and, therefore, 1958 data, for the most part, are not comparable except at the industry total.

[2]Detailed product figures for this product grouping will appear in the final census report. Preliminary 1963 product detail appears in Current Industrial Reports Series M28G(1963)-1, "Pharmaceutical Preparations, Except Biologicals." The variations between the two sets of figures are due primarily to the following reasons:

a. Use of different bases for reporting value. Product class shipments of pharmaceutical preparations reported in the census of manufactures represent net sales value (total sales dollars, less discounts, allowances, and returns) f.o.b. plant. The value includes a profit (or loss) normally assigned to the manufacturing establishment to cover only those costs attributable to the establishment. For example, sales costs by separately maintained sales organizations are excluded. The data shown in Current Industrial Reports Series M28G, however, include value attributed by sales distribution, advertising, direct promotion, and research whether or not directly attributable to the establishment. In cases where manufacturing, distribution, and sales operations are consolidated for accounting purposes for the establishment, the two values are comparable.

b. Duplication--in order to avoid duplication of shipment figures, preparations shipped in bulk quantities which were repackaged at another location have been omitted from the commodity survey, but the shipments of the repackager have been included. The census figures also include the bulk shipments. The omitted bulk sales dollars from the commodity survey are as follows: Code 28341, $9,497 million; Code 28342, $13,108 million; Code 28343, $5,363 million; Code 28344, $1,946 million; Code 28345, $4,682 million; Code 28346, $1,309 million; Code 28347, $20,922 million; Code 28348, $52,059 million; Code 28349, $2,539 million.

1963 CENSUS OF MANUFACTURES

MC63(P)-280-1

INDUSTRY SERIES

preliminary report

Soap and other detergents

SIC Code 2841

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Soap and Other Detergents Industry shipped products valued at $2,124 million, an increase of 32 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 4 percent from 1958 and 1 percent decrease from 1962 to a total of 30.8 thousand employees in 1963. Value added by manufacture amounted to $1,133 million in 1963, an increase of 32 percent from 1958 and 6 percent from 1962.

The Soap and Other Detergents Industry includes establishments engaged primarily in the manufacture of soap, synthetic organic detergents, inorganic alkaline detergents, or any combination thereof, and establishments producing crude and refined glycerin from vegetable and animal fats and oils.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

Table 1.--GENERAL STATISTICS FOR THE SOAP AND OTHER DETERGENTS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2841)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]

1958.....	608	163	29,603	181,485	18,180	36,779	97,294	857,585	747,777	1,605,935	17,795	(X)

(NA) Not available. (X) Not applicable.

[1] Includes expenditures for plants under construction but not in operation.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

August 1965

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963 value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Soap and Other Detergents Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Soap and Other Detergents Industry amounted to $2,124 million. Of this total, $383 million were products primary to other industries; and $121 million were receipts for miscellaneous activities. The industry shipments of primary products represent 81 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 86 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $1,796 million of soap and other detergents were shipped by all producers of these products. Of this total, $1,620 million, or 90 percent, were shipped by plants classififed in Industry 2841, Soap and Other Detergents, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 91 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

[1]Code 2841111 combined with code 2841121 in 1963.

[2] A distribution of 1958 data in accordance with the 1963 definitions for codes 2841261 and 2841361 is not available. Therefore, these codes for 1958 are combined as 2841261.

[3]Includes natural glycerine only. Additional data on quantities produced and quantities and values shipped for synthetic glycerine are shown in the United States Tariff Commission's annual report "Synthetic Organic Chemicals, United States Production and Sales." For 1963 there were 161,648 million pounds produced and 161,911 million pounds shipped at a value of $26,974 million.

[4]Includes both natural and synthetic glycerine.

[5]Code 2841521 combined with code 2841535 in 1963.

BCD...

a unique tool for economic analysis

BUSINESS CYCLE DEVELOPMENTS is published monthly for specialists concerned with the analysis of current business conditions. It summarizes many of the available economic time series in convenient form for short-term evaluation and interpretation and supplements other Department of Commerce reports on the economy. The features of this report are:

- The arrangement of series according to their usual timing relations during the course of the business cycle.
- The inclusion of special analytical measures and historical cyclical comparisons that help in evaluating the current stage of the business cycle.
- The speed with which the data are collected, assembled, and published. BCD is issued about the 22 d of each month covering data for the preceding month.

About 90 principal indicators and over 300 components are used for the different measures shown. The movements of the series are shown against the background of the expansions and contractions of the general business cycle so that "leads" and "lags" can readily be detected and unusual cyclical developments spotted. Since almost all of the basic data presented in this report are available in other published sources, the value of BCD lies in its analytical arrangement and speed of publication.

The presentation and classification of the time series in the BCD report follows the business indicators approach. The classification of series and the business cycle turning dates are those designed by the National Bureau of Economic Research which, in recent years, has been a leader in this field of investigation.

1963 CENSUS OF MANUFACTURES

MC63(P)-28D-2

INDUSTRY SERIES

preliminary report

Polishes and sanitation goods

SIC Code 2842

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Polishes and Sanitation Goods Industry shipped products valued at $764 million, an increase of 31 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 2 percent from 1958 to a total of 16.3 thousand employees in 1963. Value added by manufacture amounted to $423 million in 1963, an increase of 43 percent over 1958.

The Polishes and Sanitation Goods Industry includes establishments engaged primarily in the manufacture of furniture and automobile body polish and cleaners, floor polish and shoe polishes and cleaners; dressings and finishes for fabricated leather and other materials; household insecticides and repellants and industrial exterminants; household, institutional and industrial plant disinfectants and deodorants; fabric softeners and laundry starch preparations; and other sanitation preparations.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report

Table 1.—GENERAL STATISTICS FOR THE POLISHES AND SANITATION GOODS INDUSTRY IN THE UNITED STATES: 1963 AND 1958

(SIC code 2842)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	1,082	174	16,276	96,445	9,413	18,835	41,891	423,065	335,749	763,556	13,202
1958	1,156	188	16,429	82,594	9,352	17,840	35,603	295,566	290,021	585,029	7,082

[1] Includes expenditures for plants under construction but not in operation.

[2] In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See the annual survey of manufactures volumes for further explanation of the sampling estimate.

July 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and 1963.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963 value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Polishes and Sanitation Goods Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries) and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Polishes and Sanitation Goods Industry amounted to $764 million. Of this total, $124 million were products primary to other industries; and $106 million were receipts for miscellaneous activities. The industry shipments of primary products represent 81 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 86 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $741 million of polishes and sanitation goods were shipped by all producers of these products. Of this total, $533 million, or 72 percent were shipped by plants classified in Industry 2842, Polishes and Sanitation Goods, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 80 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of

Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

MC63(P)-28D-3

INDUSTRY SERIES

preliminary report

Surface active agents

SIC Code 2843

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Surface Active Agents Industry shipped products valued at $174 million, an increase of 38 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 29 percent from 1958 to a total of 4.0 thousand employees in 1963. Value added by manufacture amounted to $72 million in 1963, an increase of 38 percent from 1958.

The Surface Active Agents Industry includes establishments engaged primarily in the manufacture of surface active preparations for use as wetting agents, emulsifiers, and penetrants. Establishments engaged in producing sulfonated oils and fats and related products are also included.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date.

Table 1.—GENERAL STATISTICS FOR THE SURFACE ACTIVE AGENTS INDUSTRY IN THE UNITED STATES: 1963 AND 1958

(SIC code 2843)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	147	58	4,050	31,421	2,128	4,498	12,367	72,430	101,125	174,435	7,120
1958[3]	142	46	3,122	19,484	1,835	3,707	8,870	52,421	73,317	126,624	3,127

[1]Includes expenditures for plants under construction but not in operation.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1963 and 1958 are not comparable with those for earlier years.

April 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963 value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Surface Active Agents Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Surface Active Agents Industry amounted to $174 million. Of this total, $37 million were products primary to other industries; and $9 million were receipts for miscellaneous activities. The industry shipments of primary products represent 77 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 80 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $284 million of surface active agents, finishing agents, and sulfonated oils and assistants were shipped by all producers of these products. Of this total, $128 million, or 45 percent, were shipped by plants classified in Industry 2843, Surface Active Agents, while the remainder was shipped by plants classified in other industries. The 1958 ratio was also 45 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE SURFACE ACTIVE AGENTS INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2843)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Toilet preparations SIC Code 2844

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Toilet Preparations Industry shipped products valued at $1,796 million, an increase of 69 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 19 percent over 1958 and 4 percent over 1962 to a total of 35.0 thousand employees in 1963. Value added by manufacture amounted to $1,235 million in 1963, an increase of 77 percent over 1958 and 21 percent over 1962.

The Toilet Preparations Industry includes establishments engaged primarily in the manufacture of perfumes (natural and synthetic), cosmetics, and other toilet preparations. This industry also includes establishments primarily engaged in blending and compounding perfume bases; and those manufacturing shampoos and shaving products, whether from soap or synthetic detergents. Establishments primarily engaged in manufacturing synthetic perfume and flavoring materials are classified in Industry 2818, and essential oils in Industry 2899.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957

Table 1.—GENERAL STATISTICS FOR THE TOILET PREPARATIONS INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(NA) Not available. (S) Does not meet publication standards. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

June 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Toilet Preparations Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Toilet Preparations Industry amounted to $1,796 million. Of this total, $117 million were products primary to other industries; and $93 million were receipts for miscellaneous activities. The industry shipments of primary products represent 93 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 91 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $1,858 million of toilet preparations were shipped by all producers of these products. Of this total, $1,586 million, or 85 percent, were shipped by plants classified in Industry 2844, Toilet Preparations, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 81 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

NOTE: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in this or associated industries or areas, or (b) because the industry was of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on this industry.)

[1]Less than $500 thousand.

1963 CENSUS OF MANUFACTURES

MC63(P)-28E-1

INDUSTRY SERIES

preliminary report

Paints and allied products

SIC Code 2851

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Paints and Allied Products Industry shipped products valued at $2,422 million, an increase of 29 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 4 percent over 1958, to a total of 61.4 thousand employees in 1963. Value added by manufacture amounted to $1,078 million in 1963, an increase of 34 percent over 1958 and 13 percent over 1962.

The Paints and Allied Products Industry includes establishments engaged primarily in the manufacture of paints (in paste and ready mixed form), varnishes, lacquers, enamels, and shellac; putties and caulking compounds; wood fillers and sealers; paint and varnish removers; paint brush cleaners, and allied paint products.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska

Note: A revision in the definition of Industry 2852, Putty and Caulking Compounds, was introduced in the 1957 Standard Industrial Classification so that data for the industry prior to 1958 are not directly comparable. In addition, a revision in the definition of Industry 2851, Paints and Varnishes was introduced in 1963 which combined Industry 2851, Paints and Varnishes with Industry 2852, Putty and Caulking Compound.

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

June 1965

BUREAU OF THE CENSUS,

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

and Hawaii are included for 1958 and subsequent years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963 value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Paints and Allied Products Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Paints and Allied Products Industry amounted to $2,422 million. Of this total, $84 million were products primary to other industries; and $136 million were receipts for miscellaneous activities. The industry shipments of primary products represent 96 percent of the total manufactured product shipments, primary and secondary.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $2,282 million of paints and allied products were shipped by all producers of these products. Of this total, $2,203 million, or 96 percent, were shipped by plants classified in Industry 2851, Paints and Allied Products while the remainder was shipped by plants classified in other industries.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE PAINTS AND ALLIED PRODUCTS INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2851)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)		($1,000)
United States, total	1,779	650	61,353	401,812	33,696	68,885	182,664	1,077,638	1,348,719	2,421,780	37,293	58,770	806,895

Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in this or associated industries or areas, or (b) because the industry was of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on this industry.)

(D) Withheld to avoid disclosing figures for individual companies.

[1] Less than $500 thousand.

Table 3.—QUANTITY AND VALUE OF PAINTS AND ALLIED PRODUCTS SHIPPED BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Includes quantity and value of these products reported not only by establishments classified in the Paints and Allied Products Industry but also by establishments making these items as "secondary" products in other industries. See text under "Value of Shipments")

Product code	Product	1963[1]		1958		
		Total shipments including interplant transfers		Production for all purposes	Total shipments including interplant transfers	
		Quantity (1,000 gals.)	Value ($1,000)	(1,000 gals.)	Quantity (1,000 gals.)	Value ($1,000)
2851- --	Paints, varnishes, lacquers and enamels, total	(X)	2,281,967	(X)	(X)	1,753,923
28511 --	Exterior oil-type trade sales paint products, total	[2]116,936	392,086	117,224	116,650	375,027
28511 10	Oil and alkyd vehicle paints in paste and semipaste form	2,713	9,054	3,586	3,215	16,246
	Oil paints, enamels, and varnishes in ready-mixed form and tinting bases:					
28511 21	Oil and alkyd vehicle house paint	47,125	169,837	49,986	50,022	176,460
28511 23	Enamels, including trim and trellis, porch and deck	18,150	73,947	16,282	16,132	62,629
28511 25	Under coatings and primers	11,587	37,442	8,734	8,686	27,845
28511 27	Barn and roof paints, excluding bituminous and metallic paints and roof coatings	3,402	9,142	4,413	4,398	10,178
28511 29	Bituminous paints, excluding roof coatings	1,852	2,682	6,328	6,297	5,027
28511 30	Marine paints, excluding ship bottom or other specially formulated paints	2,739	10,462	1,935	1,978	6,876
28511 31	Metallic paints (aluminum, zinc, bronze, etc.)	4,163	13,613	6,591	6,657	19,796
28511 32	Traffic paints (all types)	9,070	19,938	6,331	6,317	14,337
28511 34	Varnish, oleoresinous (synthetic and natural)	4,521	12,248	6,170	6,073	15,669
28511 37	Stains, including shingle and shakes	4,442	11,661	3,181	3,174	8,460
28511 39	Other exterior oil paints, including stains	3,575	10,010	3,687	3,701	11,504
28511 00	Exterior oil-type trade sales paint products, not specified by kind	(S)	12,050	([3])	([3])	([3])
28512 --	Exterior water-type trade sales paint products, including tinting bases, total	[2]27,913	81,510	13,919	13,718	17,949
	Emulsion paints:					
28512 12	Acrylic	8,068	31,569			
28512 15	Styrene-butadiene	2,059	6,102			
28512 17	Vinyl and others	9,772	29,622	13,919	13,718	17,949
28512 19	Other exterior water-thinned paints, including dry types (dry converted on basis of 5 lbs. per gallon)	6,474	9,719			
28512 00	Exterior water-type trade sales paint products, not specified by kind	(S)	4,498	([3])	([3])	([3])
28513 --	Interior oil-type trades sales paint products, total	[2]91,461	290,356	155,470	154,365	281,596
	Oil paints, enamels, and varnishes in ready-mixed form, including tinting bases and excluding aerosols:					
28513 51	Mill white paints	3,245	8,395	6,430	6,360	18,223
28513 52	Flat wall paints, including semi-paste (oil and alkyd vehicle)	23,049	66,347	27,686	27,494	80,471
28513 55	Gloss and semi-gloss, including enamels	34,646	123,151	29,156	29,087	102,554
28513 56	Under coatings and primers	7,650	22,335	6,779	6,769	20,045
28513 59	Other interior oil paints and enamels, n.e.c.	2,865	9,633	6,096	6,044	19,476
	Varnishes:					
28513 63	Synthetic resin base varnish	9,362	26,354	5,852	5,840	17,179
28513 67	Shellac varnish	1,886	4,435	3,366	3,367	7,862
28513 68	Other, including natural and spirit	1,619	4,348	4,127	4,102	10,287
28513 71	Stains	2,963	8,520	1,990	1,989	5,499
28513 81	Aerosol paints made from paint produced in this establishment	2,621	11,910	(NA)	(NA)	(NA)
28513 00	Interior oil-type trade sales paint products, not specified by kind	(S)	4,928	([3])	([3])	([3])
28514 --	Interior water-type trade sales paint products, including tinting bases, total	[2]90,754	248,341	63,988	63,313	167,781
	Emulsion paints:					
28514 79	Acrylic	11,336	32,310	4,678	4,677	14,739
28514 81	Styrene-butadiene	27,431	87,265	33,422	32,990	104,448
28514 82	Vinyl and others	39,752	108,393	12,178	12,023	36,063
28514 98	Other interior water-thinned paints including paste and semi-paste (plastic texture converted on basis of 10 lbs. per gallon, other dry 5lbs. per gallon)[4]	10,214	14,857	13,710	13,623	12,531
28514 00	Interior water-type trade sales paint products, not specified by kind	(S)	5,516	([3])	([3])	([3])
28515 --	Trade sales lacquers, total	[2]13,838	41,883	(NA)	(NA)	(NA)
	Clear:					
28515 72	Cellulose lacquers	5,764	12,997	([4])	([4])	([4])
28515 77	Noncellulose lacquers	288	789	([5])	([5])	([5])
	Pigmented:					
28515 82	Cellulose lacquers	2,558	8,795	([6])	([6])	([6])
28515 87	Noncellulose lacquers	4,786	17,963	([7])	([7])	([7])
28515 00	Trade sales lacquers, not specified by kind	(S)	1,339	([3])	([3])	([3])
28516 --	Industrial product finishes, except lacquers, total	[2]238,605	623,623	174,675	172,782	436,402
28516 11	Specially formulated coatings for special conditions in the interior of industrial plants requiring protection against extreme temperatures, fungi, chemicals, fumes, etc	8,468	26,016	7,239	7,159	24,998
28516 13	Specially formulated coatings for special conditions in the exterior of industrial plants requiring protection against extreme temperatures, fungi, chemicals, fumes, etc	24,213	30,286	23,259	23,842	25,185
28516 18	Marine paints, ship bottom, and other specially formulated paints	8,252	27,022	7,914	7,925	26,149
	Pigmented industrial product finishes, excluding lacquer:					
28516 22	Undercoaters and primers	25,980	71,019	18,567	18,024	50,739
	Alkyd and oil types:					
28516 36	Automotive finishes[8]	27,501	97,903	19,413	19,146	62,814
28516 38	Appliance finishes	9,957	31,930	6,768	6,635	25,556

See footnotes at end of table.

Table 3.—QUANTITY AND VALUE OF PAINTS AND ALLIED PRODUCTS SHIPPED BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958—Continued

Product code	Product	1963[1]		1958		
		Total shipments including interplant transfers		Production for all purposes	Total shipments including interplant transfers	
		Quantity (1,000 gals.)	Value ($1,000)	(1,000 gals.)	Quantity (1,000 gals.)	Value ($1,000)
28516 --	Industrial product finishes, except lacquers--Continued					
	Pigmented industrial product finishes, excluding lacquer--Continued					
	Alkyd and oil types:					
28516 41	Wood furniture and fixture finishes	7,507	15,991			
28516 42	Wood and composition flat stock finishes	3,574	8,830			
28516 43	Metal decorating finishes	11,170	35,990			
28516 44	Sheet, strip, and coil coatings, including sidings	7,989	26,127	29,337	28,630	87,015
28516 47	Machinery and equipment finishes	12,474	37,030			
28516 49	Other finishes, including metal furniture finishes	19,476	57,851			
28516 50	Other types (wrinkle, hammer, metallic, etc.)	5,992	19,879	13,311	13,004	41,329
	Clear industrial product finishes, excluding lacquer:					
28516 52	Insulating varnishes, electrical types	(S)	14,832	3,042	2,992	7,903
	Synthetic resin base varnishes:					
28516 54	Alkyd	11,465	23,882	9,398	9,346	22,722
28516 59	Other, including epoxy, phenolic, etc	5,140	13,778	7,017	6,874	16,595
28516 60	Other clear varnishes, including natural oleoresinous base varnishes, spirit and shellac varnishes, baking and drying japans and driers, and mixtures not elsewhere listed	9,391	21,498	7,695	7,598	15,716
28516 71	Stains	3,916	6,264	2,118	2,089	3,047
28516 72	Automotive underbody coatings	(S)	7,813	13,143	13,127	10,725
28516 93	Epoxy, urethane, and other two-component finishes	1,701	9,027			
28516 94	Urethane floor finishes and other industrial epoxies	887	3,538	6,454	6,391	15,909
28516 95	Other industrial product finishes, excluding semimanufactured products such as pigment dispersions, ink vehicles and organosols	6,829	21,335			
28516 00	Industrial product finishes, except lacquers, not specified by kind	(S)	15,782	(3)	(3)	(3)
28517 --	Industrial lacquers, including acrylics, total	[2]72,141	185,586	68,462	62,792	167,469
	Clear:					
28517 72	Cellulose lacquers	28,129	58,725	[4]32,231	[4]27,278	[4]58,004
28517 77	Noncellulose lacquers	9,397	20,290	[5]8,844	[5]8,172	[5]20,828
	Pigmented:					
28517 82	Cellulose lacquers	16,571	50,505	[6]20,836	[6]20,770	[6]64,871
	Noncellulose lacquers:					
28517 83	Automotive	9,983	33,492	[7]6,551	[7]6,572	[7]23,766
28517 85	Other	5,937	17,115			
28517 00	Industrial lacquers, including acrylics, not specified by kind	(S)	5,459	(3)	(3)	(3)
28518 --	Putty, caulking compounds and allied products, total	(X)	126,600	(X)	(X)	65,191
28518 11	Wood and textile preservatives (nonpressure type)	7,446	8,895	(NA)	(NA)	3,747

28518 65	Other types	3,839	7,630	3,512	3,508	7,048
28518 98	Other allied paint products, including brush cleaners	(S)	44,070	(X)	(X)	6,097
28518 00	Putty, caulking compounds and allied products, not specified by kind	(X)	9,454	(X)	(X)	2,816
28519 --	Miscellaneous paint products, total	(X)	190,314	(X)	(X)	117,305
28519 11	Thinners for dopes, lacquers, and oleoresinous thinners, including mixtures and proprietary thinners (sold as such)	54,007	54,237	45,665	45,345	47,334
		(1,000 lbs.)		(1,000 lbs.)	(1,000 lbs.)	
28519 31	Bleached shellac (not varnish)	12,912	5,547	17,505	16,935	9,012
28519 41	Aerosol paints made from purchased paint; excluding receipts for contract work received for filling aerosol containers for others using their products	(S)	17,509	(NA)	(NA)	(NA)
		(1,000 gals.)		(1,000 gals.)	(1,000 gals.)	
28519 71	Miscellaneous related paint products, e.g., pigment dispersions, ink vehicles, organosols (plastisols), etc	(X)	103,434	(X)	(X)	60,959
28519 00	Miscellaneous paint products, not specified by kind	(X)	9,587	(X)	(X)	-
28510 00	Paints, varnishes, lacquers, and enamels, not specified by kind	(NA)	101,668	[8] [9]44,897	[8] [9]44,539	[8]125,203

- Represents zero. (NA) Not available. (S) Does not meet publication standards. (X) Not applicable. [r]Revised.

[1]Quantity of production data for 1963 will be published in the final report for this industry.

[2]Includes quantities for products listed below for which quantity data were suppressed because reported quantity did not meet publication standards.

[3]Codes 2851100, 2851200, 2851300, 2851400, 2851500, 2851600, 2851700, and 2851900 for 1958 included in code 2851000. Separate figures are not available because of change in 5-digit product class definitions between 1958 and 1963.

[4]Code 2851572, Trade sale cellulose clear lacquers were not collected separately in 1958. Included in "Clear cellulose lacquers," code 2851772.

[5]Code 2851577, Trade sale noncellulose clear lacquers, were not collected separately in 1958. Included in "Clear noncellulose lacquers," code 2851777.

[6]Code 2851582, Trade sale cellulose pigmented lacquers, were not collected separately in 1958. Included in "Pigmented cellulose lacquers," code 2851782.

[7]Code 2851587, Trade sale noncellulose pigmented lacquers, were not collected separately in 1958. Included in "Pigmented noncellulose lacquers, automotive and other," codes 2851783 and 2851785.

[8]Includes an unspecified amount of trade sale automotive finishes.

[9]Estimated on basis of average for products included in product classes 28511 through 28517.

n.e.c. Not elsewhere classified.

PUBLICATION PROGRAM 1963 CENSUSES OF MANUFACTURES AND MINERAL INDUSTRIES

Results of the 1963 Censuses of Manufactures and Mineral Industries will be issued initially in preliminary reports which will furnish summary data. These reports will be superseded by more detailed final reports. An outline of the publication program is shown below.

PRELIMINARY REPORTS

Summary Series

Manufactures (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. General statistics will also be presented for industries grouped according to market categories—durable and nondurable goods industries. A second report will provide general statistics without industry detail for regions, States, and large standard metropolitan statistical areas.

Mineral Industries (2 reports). One report will present general statistics at the U.S. level for each 4-digit industry and 2- and 3-digit industry group. A second report will provide general statistics by 2-digit industry group for regions and States.

Industry Series

Manufactures (about 370 reports). Separate reports for virtually all of the 430 manufacturing industries will give industry totals for general statistics for the United States and for regions and States. A product table in each report will give the quantity and value of shipments of the products classified in the industry for the United States.

Mineral Industries (about 45 reports). Separate reports for industries or for groups of industries for all of the 50 mineral industries will present general statistics for the United States and for regions and States. A product table will give the quantity and value of shipments of the products classified in the industry for the United States and for regions and States.

Area Series

Manufactures (51 reports). A separate report for each State and the District of Columbia will present general statistics for the State and for the larger standard metropolitan statistical areas within the State by 2-digit and selected 3-digit industries, and for most individual counties on an "all manufacturing" basis.

Subject Series

Manufactures (2 reports). One report will provide data on the number of establishments, employment, and value added by manufacturing for each 4-digit industry according to employment size of the establishment in each industry. A separate report will provide statistics on inventories for each 4-digit industry on a national basis; State data on inventories will also be provided.

Mineral Industries (one report). This report will provide number of establishments, employment, and value added in mining for each 4-digit industry according to employment size of the establishment in each industry.

FINAL REPORTS

All preliminary reports will be superseded by comparable final reports. After separate final reports have been issued, they will be assembled and reissued in cloth bindings as follows:

Manufactures

Volume I, Summary Statistics

Volume II, Industry Statistics
Part 1, Major Groups 20-28
Part 2, Major Groups 29-39

Volume III, Area Statistics

Mineral Industries

Volume I, General Summary and Industry Statistics

Volume II, Area Statistics

1963 CENSUS OF MANUFACTURES IN PUERTO RICO

A separate 1963 Census of Manufactures was conducted jointly by the Puerto Rico Planning Board, Government of the Commonwealth of Puerto Rico, and the U.S. Bureau of the Census. A report of the findings will include statistics of manufacturing activity by industry and geographic area on value added by manufacture, employment, payrolls, inventories, capital expenditures, etc.

Additional Information and Order Forms

A more detailed description of the publication program of the 1963 censuses, including tentative publication dates, is available free of charge. Separate announcement and order forms for the preliminary reports of the censuses of manufactures and mineral industries are also available free of charge. Requests for order forms should specify which report series is desired. All requests should be addressed to the Publications Distribution Section, Bureau of the Census, Washington, D.C., 20233.

1963 CENSUS OF MANUFACTURES

MC63(P)-28E-2

INDUSTRY SERIES

preliminary report

Gum and wood chemicals

SIC Code 2861

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Gum and Wood Chemicals Industry shipped products valued at $212 million, an increase of 16 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 7 percent from 1958 to a total of 6.7 thousand employees in 1963. Value added by manufacture amounted to $98 million in 1963, an increase of 16 percent over 1958.

The Gum and Wood Chemicals Industry includes establishments engaged primarily in the manufacture of hardwood and softwood distillation products, wood and gum naval stores, charcoal, natural dyestuffs, natural tanning materials, tall oil and rosin and rosin acid products.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. **10 cents.**

years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Gum and Wood Chemicals Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Gum and Wood Chemicals Industry amounted to $212 million. Of this total, $59 million were products primary to other industries; and $6 million were receipts for miscellaneous activities. The industry shipments of primary products represent 71 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was also 71 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $195 million of gum and wood chemicals, were shipped by all producers of these products. Of this total, $146 million, or 75 percent, were shipped by plants classified in Industry 2861, Gum and Wood Chemicals, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 86 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965

through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.--GENERAL STATISTICS FOR THE GUM AND WOOD CHEMICALS INDUSTRY BY GEOGRAPHIC AREAS: 1963 and 1958

(SIC code 2861)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture

(S) Does not meet publication standards. rRevised. (X) Not applicable.

[1]Excludes data for sulfate wood turpentine, production of which according to the U.S. Department of Agriculture, amounted to 19,750,000 gallons for calendar year 1963 and 15,400,500 gallons for calendar year 1958, on a refined basis.

[2]Excludes pinene reported as such.

[3]Includes $1,531 thousand for 1963, and $1,738 thousand for 1958, of acetic acid, natural. In addition, 1963 sales of synthetic acetic acid totaled 204,378 thousand pounds valued at $15,096 thousand, data for which are compiled by the U.S. Tariff Commission. Data for synthetic acetic acid are included in Industry 2818, Organic Chemical, N.E.C.

[4]Includes $1,012 thousand for 1963, and $1,163 thousand for 1958, of methanol (methyl or wood alcohol). In addition, 1963 sales of synthetic methanol totaled 1,059,113 thousand pounds valued at $36,323 thousand, data for which are compiled by the U.S. Tariff Commission. Data for synthetic methanol are included in Industry 2818, Organic Chemicals, N.E.C.

[5]Data for refined tall oil fatty acids containing 90 percent or more free fatty acids, excluding rosin acids, are reported in Industry 2899, Chemical Preparations, N.E.C.

INDUSTRY SERIES

Fertilizers and Fertilizers, mixing only

SIC Codes 2871 and 2872

preliminary report

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Fertilizers Industry shipped products valued at $864 million, an increase of 43 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 7 percent from 1958 to a total of 20.0 thousand employees in 1963. Value added by manufacture amounted to $280 million in 1963, an increase of 41 percent from 1958.

Manufacturers in the Fertilizers, Mixing Only, Industry shipped products in 1963 valued at $612 million, an increase of 40 percent over 1958. Average employment in this industry totaled 13.5 thousand employees and value added by manufacture amounted to $163 million.

The Fertilizers Industry includes establishments engaged primarily in the manufacture of mixed fertilizers (mixtures containing nitrogen, phosphoric acid (P_2O_5) or potash from one or more fertilizer materials produced in the same establishment. Sulfuric, phosphoric and nitric acid plants operated in conjunction with fertilizer plants and separately reported are classified in Industry 2819. When separate reports are not available these acid plants are classified in this industry. Establishments engaged in manufacturing urea are classified in Industry 2818. Establishments primarily engaged in mining, milling, or

otherwise preparing natural potassium, sodium, or boron compounds (other than common salt) are classified in Industry 1474. Establishments primarily engaged in manufacturing mixed fertilizers from purchased fertilizer materials are classified in Industry 2872, Fertilizers, Mixing Only.

The Fertilizers, Mixing Only, Industry includes establishments primarily engaged in mixing fertilizers from purchased fertilizer materials. Establishments primarily engaged in bulk blending of purchased fertilizer materials mostly for sale directly to the consumer are classified in Retail Trade.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958 and 1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954, 1958, and 1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and 1939, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Fertilizers Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Fertilizers Industry amounted to $864 million. Of this total, $85 million were products primary to other industries; and $70 million were receipts for miscellaneous activities. The industry shipments of primary products represent 89 percent of the total manufactured product shipments, primary and secondary.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $734 million of fertilizers were shipped by all producers of these products. Of this total, $709 million, or 97 percent, were shipped by plants classified in Industry 2871, Fertilizers, while the remainder was shipped by plants classified in other industries.

The value of shipments reported by establishments classified in the Fertilizers, Mixing Only, Industry amounted to $612 million. Of this total, $78 million, were products primary to other industries; and $103 million were receipts for miscellaneous activities. The industry shipments of primary products represent 85 percent of the total manufactured product shipments, primary and secondary.

Table 3 indicates that $464 million of mixed fertilizers were shipped by all producers of these products. Of this total, $430 million, or 93 percent, were shipped by plants classified in Industry 2872, Fertilizers, Mixing Only, while the remainder was shipped by plants classified in other industries.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1A, 1B, and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1A, 1B, and 2) with product statistics (tables 3A and 3B) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 1B.—GENERAL STATISTICS FOR THE FERTILIZERS, MIXING ONLY, INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2872)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]

(NA) Not available.

[1] Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2] In addition to the data shown, estimates have been derived and published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These data have been withheld from this preliminary report as they include the combined data for Industries 2871, Fertilizers, and 2872, Fertilizers, Mixing Only.

[3] Data for Alaska and Hawaii are not included.

Table 2.—GENERAL STATISTICS FOR THE FERTILIZERS AND FERTILIZERS, MIXING ONLY, INDUSTRIES BY GEOGRAPHIC AREAS: 1963 AND 1958

Note: Each producing State not shown separately in the above table was withheld either (a) to avoid disclosing figures for individual companies, in these or associated industries or areas, or (b) because the industries were of relatively minor economic importance in the State. (Additional publishable detail will appear in the final census report on these industries.)

(D) Withheld to avoid disclosing figures for individual companies.

[1]Less than $500 thousand.

Table 3A.—QUANTITY AND VALUE OF FERTILIZERS AND FERTILIZERS, MIXING ONLY, SHIPPED BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

(Includes quantity and value of these products reported not only by establishments classified in the Fertilizers, and Fertilizers, Mixing Only, Industries but also by establishments making these items as "secondary" products in other industries. See text under "Value of Shipments")

Product code	Product	1963			1958		
		Production for all purposes (short tons)	Total shipments including Interplant transfers		Production for all purposes (short tons)	Total shipments including interplant transfers	
			Quantity (short tons)	Value ($1,000)		Quantity (short tons)	Value ($1,000)
2871- --	Fertilizers, total	(X)	(X)	734,314	(X)	(X)	(NA)
28711 --	Superphosphate and other phosphatic fertilizer materials, total[1]	(X)	(X)	326,165	(X)	(X)	153,611
	Superphosphate:

2872- --	Fertilizers, mixing only, total	(X)	(X)	464,330	(X)	(X)	([6])
28722 --	Mixed fertilizers made by plants which do not manufacture any ingredients, total	(X)	(X)	464,330	(X)	(X)	([6])
	Complete mixtures (grades guaranteeing N, P_2O_5, and K_2O):						
28722 13	Shipped in dry form	6,937,424	6,550,314	347,066	(X)	(X)	([6])
28722 17	Shipped in liquid form	284,476	287,438	15,835	(X)	(X)	([6])
	Incomplete mixtures:						
28722 25	Grades guaranteeing N and P_2O_5 only (including ammoniated superphosphates)	314,375	305,926	21,295	(X)	(X)	([6])
28722 31	Grades guaranteeing P_2O_5 and K_2O only	426,332	414,015	19,988	(X)	(X)	([6])
28722 51	Grades guaranteeing N and K_2O only	168,658	165,703	8,592	(X)	(X)	([6])
28722 78	Other incomplete mixtures	139,146	145,689	6,724	(X)	(X)	([6])
28722 00	Mixed fertilizers made by plants which do not manufacture any ingredients, not specified by kind	(X)	(X)	[7]44,830	(X)	(X)	([6])

- Represents zero. (NA) Not available. (X) Not applicable.

[1]Quantity data showing production, shipments, plant consumption and stocks have been published on a monthly basis for intercensal years in Current Industrial Reports Series M28D, Superphosphate and Other Phosphatic Fertilizer Materials, for product codes 2871115, 2871141, 2871151 and 2871161.

[2]Production data include 18,696 short tons of 100% P_2O_5 for 1963 and 12,190 short tons for 1958, reported by Tennessee Valley Authority.

[3]Production data include 32,702 short tons of 100% P_2O_5 reported by Tennessee Valley Authority.

[4]In 1958 data for ammonium phosphates and other chemically processed phosphatic fertilizer materials were included in complete or incomplete mixtures, codes 2871213, 17, 23, 27, 31 and 71.

[5]Production data include 41,812 short tons of 100% P_2O_5 reported by Tennessee Valley Authority.

[6]For 1958, product information for Industry 2871, Fertilizers, was combined with product information for Industry 2872, Fertilizers, Mixing Only. See table 3B for combined data.

[7]This figure is largely accounted for by small establishments reporting on "short forms" which did not require the reporting of detailed information by mixtures.

Table 3B.—QUANTITY AND VALUE OF TOTAL MIXED FERTILIZERS SHIPPED BY ALL PRODUCERS IN THE UNITED STATES: 1963 AND 1958

Product code	Product	1963			1958

(X) Not applicable.

[1]This figure is largely accounted for by small establishments reporting on "short forms" which did not require the reporting of detailed information by mixtures.

BCD...

a unique tool for economic analysis

BUSINESS CYCLE DEVELOPMENTS is published monthly for specialists concerned with the analysis of current business conditions. It summarizes many of the available economic time series in convenient form for short-term evaluation and interpretation and supplements other Department of Commerce reports on the economy. The features of this report are:

- The arrangement of series according to their usual timing relations during the course of the business cycle.
- The inclusion of special analytical measures and historical cyclical comparisons that help in evaluating the current stage of the business cycle.
- The speed with which the data are collected, assembled, and published. BCD is issued about the 22d of each month covering data for the preceding month.

About 90 principal indicators and over 300 components are used for the different measures shown. The movements of the series are shown against the background of the expansions and contractions of the general business cycle so that "leads" and "lags" can readily be detected and unusual cyclical developments spotted. Since almost all of the basic data presented in this report are available in other published sources, the value of BCD lies in its analytical arrangement and speed of publication.

The presentation and classification of the time series in the BCD report follows the business indicators approach. The classification of series and the business cycle turning dates are those designed by the National Bureau of Economic Research which, in recent years, has been a leader in this field of investigation.

For sale by the Government Printing Office, Washington, D.C. 20402. $6 a year ($1.50 additional for foreign mailing). Single copies, 60¢ each.

INDUSTRY SERIES

preliminary report

Agricultural chemicals, n.e.c.

SIC Code 2879

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Agricultural Chemicals, N.E.C., Industry shipped products valued at $440 million, an increase of 32 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 8 percent over 1958 to a total of 8.4 thousand employees in 1963. Value added by manufacture amounted to $152 million in 1963, an increase of 37 percent over 1958.

The Agricultural Chemicals, N.E.C., Industry includes establishments engaged primarily in the formulation and preparation of ready-to-use agricultural pest control chemicals, including insecticides, fungicides, rodenticides, and herbicides from technical chemicals and concentrates, and the manufacture and formulation of miscellaneous agricultural chemicals, n.e.c., such as minor or trace elements, soil conditioners, etc.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification

Table 1.—GENERAL STATISTICS FOR THE AGRICULTURAL CHEMICALS, N.E.C., INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

- Represents zero. (NA) Not available.

[1]Includes expenditures for plants under construction but not in operation.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that comparable data for prior years are not available.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

(SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963, value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Agricultural Chemicals, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Agricultural Chemicals, N.E.C., Industry amounted to $440 million. Of this total, $49 million were products primary to other industries; and $83 million were receipts for miscellaneous activities. The industry shipments of primary products represent 86 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 90 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly disginguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates than $454 million of Agricultural Chemicals, N.E.C., were shipped by all producers of these products. Of this total, $308 million, or 68 percent, were shipped by plants classified in Industry 2879, Agricultural Chemicals, N.E.C., while the remainder was shipped by plants classified in other industries. The 1958 percent was 76.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of

Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Glue and gelatin SIC Code 2891

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Glue and Gelatin Industry shipped products valued at $331 million, an increase of 35 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 5 percent from 1958 to a total of 8.3 thousand employees in 1963. Value added by manufacture amounted to $138 million in 1963, an increase of 30 percent from 1958.

The Glue and Gelatin Industry includes establishments engaged primarily in the manufacture of (1) industrial and household adhesives, glues, sizes, and cements from vegetable, animal, purchased synthetic resins or synthetic resin and rubber combinations; and (2) edible, technical, photographic, or pharmaceutical gelatins from animal material.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification

Table 1.--GENERAL STATISTICS FOR THE GLUE AND GELATIN INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS
(SIC code 2891)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)
1963[2]	341	100	8,280	52,864	5,322	11,033	27,836	137,795	191,958	330,947	9,382
1958	274	93	7,890	42,146	5,166	10,563	23,878	106,383	139,251	245,205	8,077

1947[3]	174	(NA)	7,936	25,453	5,962	9,487	16,502	66,290	80,078	145,157	3,249

(NA) Not available.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1947 and is not available by 4-digit industry for 1954.

[2]In addition to the data shown, estimates have been derived and generally published for 1959-1962 from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments. The percentage standard errors indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. For this industry, the standard errors were relatively high. Therefore, the 1959-1962 data have been withheld from this preliminary report. It is planned, however, to publish such information in the final census reports. See annual survey of manufactures volumes for further explanation of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

February 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

(SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. The figures for production workers, 1954-1963, are based on employment for the payroll ended nearest the 15th of March, May, August, and November. For 1947, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954, 1958, and 1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Glue and Gelatin Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Glue and Gelatin Industry amounted to $331 million. Of this total, $51 million were products primary to other industries; and $16 million were receipts for miscellaneous activities. The industry shipments of primary products represented 84 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 86 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3A, indicates that $368 million of glues and gelatins were shipped by all producers of these products. Of this total, $264 million, or 72 percent, were shipped by plants classified in Industry 2891, Glue and Gelatin, while the remainder was shipped by plants classified in other industries. The 1958 ratio was 70 percent.

INDEXES OF PRODUCTION AND UNIT VALUE

Based on the type of quantity and value statistics shown in table 3A, indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries and are shown in table 3B. Unit values were computed for each product for which quantity figures were available. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A comparable weighted aggregative unit value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate total value of shipments of primary products for which no quantity data were available.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an

industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3A) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.--GENERAL STATISTICS FOR THE GLUE AND GELATIN INDUSTRY, BY REGIONS AND STATES: 1963 AND 1958

(SIC code 2891)

Region and State	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture

1963 CENSUS OF MANUFACTURES

MC63(P)-28G-2

INDUSTRY SERIES

Explosives SIC Code 2892

preliminary report

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Explosives Industry shipped products valued at $282 million, an increase of 24 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry totaled 14.8 thousand employees in 1963. Value added by manufacture amounted to $165 million in 1963, an increase of 25 percent over 1958 and 11 percent over 1962.

The Explosives Industry includes establishments engaged primarily in the manufacture of explosives such as sporting powder, blasting powder, high explosives, nitrated carbohydrates, safety fuses, and blasting and detonating caps. Included in this industry are Government-owned plants operated by private firms for the account of the Federal Government.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification

Table 1.—GENERAL STATISTICS FOR THE EXPLOSIVES INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(SIC code 2892)

Year	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new[1]	Standard error of estimate (percent) for number of employees column[2]

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

June 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

(SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1955-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Explosives Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Explosives Industry amounted to $282 million. Of this total, $23 million were products primary to other industries; and $90 million were receipts for miscellaneous activities. The industry shipments of primary products represent 88 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 96 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $181 million of explosives were shipped by all producers of these products. Of this total, $169 million, or 94 percent, were shipped by plants classified in Industry 2892, Explosives, while the remainder was shipped by plants classified in other industries. The 1958 ratio was also 95 percent.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary

reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Printing ink SIC Code 2893

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Printing Ink Industry shipped products valued at $270 million, an increase of 18 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 6 percent from 1958, to a total of 8.4 thousand employees in 1963. Value added by manufacture amounted to $127 million in 1963, an increase of 17 percent from 1958.

The Printing Ink Industry includes establishments engaged primarily in the manufacture of printing ink, gravure ink, screen process ink, and lithographic ink.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years but are not included for 1954 and earlier years.

Table 1.—GENERAL STATISTICS FOR THE PRINTING INK INDUSTRY IN THE UNITED STATES FOR SELECTED YEARS

(NA) Not available. (X) Not applicable.

[1]Includes expenditures for plants under construction but not in operation. This information was not collected in 1939 and 1947 and is not available by 4-digit industry for 1954.

[2]The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. Figures shown in parentheses have standard errors exceeding 15 percent. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3]Data for Alaska and Hawaii are not included.

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March; for 1954, they represent an average of all employees for the payroll period ended nearest the 15th of March, May, August, and November. For 1947, the all employee figure is an average of 12 monthly figures. For 1939 and prior years, all employees represents the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). The figures for production workers, 1954 and 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November. For 1947 and prior years, the figure represents the average of 12 monthly figures.

VALUE ADDED BY MANUFACTURE

For 1954 and 1958-1963 value added by manufacture represents adjusted value added; for earlier years it represents unadjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in the Printing Ink Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Printing Ink Industry amounted to $270 million. Of this total, $21 million were products primary to other industries; and $11 million were receipts for miscellaneous activities. The industry shipments of primary products represent 92 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio was 93 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $256 million of printing inks were shipped by all producers of these products. Of this total, $237 million, or 92 percent, were shipped by plants classified in Industry 2893, Printing Ink, while the remainder was shipped by plants classified in other industries.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any

U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

1963 CENSUS OF MANUFACTURES

INDUSTRY SERIES

preliminary report

Carbon black SIC Code 2895

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Carbon Black Industry shipped products valued at $149 million, an increase of 25 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed a decrease of 5 percent from 1958 to a total of 3.0 thousand employees in 1963. Value added by manufacture amounted to $92 million in 1963, an increase of 26 percent from 1958.

The Carbon Black Industry includes establishments engaged primarily in the manufacture of carbon black (channel and furnace black).

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included for 1958 and subsequent years.

Table 1.—GENERAL STATISTICS FOR THE CARBON BLACK INDUSTRY FOR SELECTED YEARS

(SIC Code 2895)

NA Not available. X Not applicable.

[1] Includes expenditures for plants under construction but not in operation.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that data for the industry prior to 1958 are not directly comparable. Details of this revision are described in the 1958 Census of Manufactures Volume II, Industry Statistics.

March 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. 10 cents.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

All employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March.

VALUE ADDED BY MANUFACTURE

For 1958-1963 value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year. Unadjusted value added is obtained by subtracting the cost of materials, supplies, and containers, fuel, purchased electric energy and contract work from the value of shipments for products manufactured plus receipts for services rendered.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in Carbon Black Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Carbon Black Industry amounted to $149 million. Of this total, $1 million were receipts for miscellaneous activities. The industry shipments of primary products represented almost 100 percent of the total manufactured product shipments, primary and secondary. The 1958 ratio also approximated 100 percent.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $149 million of carbon black were shipped by all producers of these products. Of this total, $148 million, or almost 100 percent, were shipped by plants classified in Industry 2895, Carbon Black while the remainder was shipped by plants classified in other industries.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses of mineral industries, retail trade, wholesale trade, and selected services, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

Table 2.—GENERAL STATISTICS FOR THE CARBON BLACK INDUSTRY BY GEOGRAPHIC AREAS: 1963 AND 1958

(SIC code 2895)

Geographic area	1963											1958	
	Establishments (number)		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	All employees, number	Value added by manufacture
	Total	With 20 or more employees	Number	Payroll ($1,000)	Number	Man-hours (1,000)	Wages ($1,000)	($1,000)	($1,000)	($1,000)	($1,000)		($1,000)
United States, total	33	31	3,010	20,669	2,283	4,913	14,915	91,752	55,544	149,122	3,972	3,162	72,641

INDUSTRY SERIES

preliminary report

Chemical preparations, n.e.c.

SIC Code 2899

This report is one of a series presenting preliminary information on industries and products covered in the 1963 Census of Manufactures. The data will be superseded in a final report which, in turn, will be included in Volume II, Industry Statistics, 1963 Census of Manufactures.

During 1963, manufacturers in the Chemical Preparations, N.E.C., Industry shipped products valued at $921 million, an increase of 27 percent over 1958, according to preliminary results obtained from the 1963 census. Average employment in this industry showed an increase of 2 percent over 1958 to a total of 25.6 thousand employees in 1963. Value added by manufacture amounted to $501 million in 1963, an increase of 37 percent over 1958.

The Chemical Preparations, N.E.C., Industry includes establishments engaged primarily in the manufacture of miscellaneous chemical preparations, n.e.c., such as essential oils, fireworks, automotive chemical specialties, and evaporated salt; industrial compounds, such as boiler and heat insulating compounds, metal, oil and water treating compounds, water proofing compounds and chemical supplies for foundries; fatty acids, such as stearic, oleic, fish and marine, coconut-type fatty acids, and other unsaturated fatty acids fractionated from vegetable and animal oils and fats.

This report does not include figures for administrative offices, warehouses, garages, or other auxiliary units which service manufacturing

(NA) Not available. (X) Not applicable. r Revised.

[1] Includes expenditures for plants under construction but not in operation.

[2] The data are estimates derived from a representative sample of manufacturing establishments canvassed in the Annual Survey of Manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The percentage standard errors in this column indicate the range of differences that can be expected between the estimates and complete canvass totals because of sampling fluctuations. See the Annual Survey of Manufactures volumes for further discussion of the sampling estimate.

[3] A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1963 and 1958 are not comparable with those for earlier years.

May 1965

U.S. DEPARTMENT OF COMMERCE, John T. Connor, Secretary

BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington, D.C., 20233, and U.S. Department of Commerce Field Offices. **10 cents.**

establishments. The classification of establishments for which data are tabulated in this report is based upon the definitions embodied in the 1957 edition of the Standard Industrial Classification (SIC) Manual, as amended to date. Data for Alaska and Hawaii are included.

ESTABLISHMENTS

The census of manufactures is conducted by obtaining a separate report for each establishment in the United States; however, manufacturing establishments with no employees are excluded from the census. Of almost 310,000 manufacturing establishments included in the 1963 census, most are operated as single-establishment companies and file a single report. Firms operating more than one establishment were required to submit a report for each separate location. Companies engaged in distinctly different lines of activity at one location were asked to submit separate reports if the company records permitted such a separation, and if the separate activities were substantial in size.

EMPLOYEES

The method of compiling figures for employees has varied somewhat from period to period. For the period 1958-1963, figures on all employees represent the average number of production workers for the payroll periods ended nearest the 15th of March, May, August, and November, plus the number of all other employees for the payroll period ended nearest the 15th of March. The figures for production workers, 1958-1963, are based on employment for the payroll period ended nearest the 15th of March, May, August, and November.

VALUE ADDED BY MANUFACTURE

For 1958-1963 value added by manufacture represents adjusted value added. Adjusted value added is equal to the value of shipments (including resales of finished products) less the cost of finished products resold, materials, supplies, fuels, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year.

Value added avoids the duplication in the value of shipments which results from the use of products of some manufacturing establishments as materials by other manufacturing establishments and is, for most purposes, the best value measure available for comparing the relative economic importance of manufacturing industries or geographic areas. No adjustments have been made in the money figures shown in this report for changes in price levels.

VALUE OF SHIPMENTS

The value of shipments reported by establishments classified in The Chemical Preparations, N.E.C., Industry consists not only of products described above as primary to the industry, but also of the value of secondary products (which are primary in other industries), and miscellaneous receipts for contract work, resale of products, etc. The total value of shipments and other receipts of establishments classified in the Chemical Preparations, N.E.C., Industry amounted to $921 million. Of this total, $160 million were products primary to other industries; and $68 million were receipts for miscellaneous activities. The industry shipments of primary products represent 81 percent of the total manufactured product shipments, primary and secondary.

The total value of shipments for the industry (i.e., the total value of receipts of establishments classified in the industry) should be clearly distinguished from the total value of primary products of the industry shipped by all producers. The latter figure, appearing in table 3, indicates that $988 million of chemical preparations, n.e.c., were shipped by all producers of these products. Of this total, $691 million, or 70 percent, were shipped by plants classified in Industry 2899, Chemical Preparations, N.E.C., while the remainder was shipped by plants classified in other industries.

GENERAL STATISTICS

The general statistics (employment, payrolls, cost of materials, value of shipments, etc.) in tables 1 and 2 are reported for each establishment as a whole. Aggregates of such figures for an industry reflect not only the primary activities of the establishments in that industry, but also their activities in the manufacture of secondary products and receipts for their other activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 and 2) with product statistics (table 3) which show the shipments by all producers of the primary products of the industry.

PUBLICATION PROGRAM AND BACKGROUND

More detailed figures for this industry will appear in the final census reports. These reports will also include a comprehensive discussion of such concepts as "industry," "establishments," and "secondary production," as well as the various statistical items such as "employment," and "value added." Similar preliminary and final reports will be issued for other industries during the coming months. Series of preliminary summary reports showing U.S. totals for each manufacturing industry and for each State are being issued. Final industry reports and final area reports will be published during the second half of 1965 through mid-1966. Order forms showing these reports and their prices may be obtained from any U.S. Department of Commerce field office or from the Bureau of the Census, Washington, D.C., 20233.

The 1963 Census of Manufactures is the 27th census of manufacturing establishments in the United States. The first census was conducted in 1810 covering manufacturing activities in 1809. For 1963, it was conducted jointly with censuses

of mineral industries, retail trade, wholesale trade, and selected serivces, under authority of Title 13 of the United States Code. This law requires that a census of manufactures be conducted every 5 years and, as recently amended, to cover years ending in "2" and "7." Thus, the next census will be conducted in 1968 covering manufacturing activity in 1967. Title 13 also authorizes an annual sample survey of manufacturing establishments in interim years.

n.e.c. not elsewhere classified. (NA) Not available. (X) Not applicable. [r]Revised.

[1]Includes for 1963 between 50 and 80 thousand tons of evaporated salt valued at less than $4 million shipped by establishments classified in the Mineral Industries. Comparable 1958 data are between 90 and 100 thousand tons valued at less than $5 million. For annual information on evaporated salt, rock salt, and salt in brine see Bureau of Mines Minerals Yearbook.

[2]Product code 2899232 combined with code 2899271 for 1958 to avoid disclosing figures for individual companies.

[3]Includes $3,378 thousand for 1958, of Natural essential oils, n.s.k.

[4]Excludes unspecified amount of permanent type antifreeze preparations classified as product code 2818211, Acyclic chemicals.

[5]Product code 2899359, Metal treating compounds includes for 1958 unspecified amounts reported in 1963 as product code 2899337, Automotive chemicals, and 2899391, Plating compounds.

[6]Product code 2899353 combined with code 2899398 for 1963 to avoid disclosing figures for individual companies.

[7]Data for product code 2899391, Plating compounds, were not reported separately in 1958 but were included in product code 2899359, Metal treating compounds and product code 2899398, Other industrial chemical specialties.

[8]Figures were not reported separately in 1958 but were included in product code 2899398, Other industrial chemical specialties.
